Modeling And Simulation Linking Entertainment And Defense:

Modeling and Simulation Committee on Modeling and Simulation: Opportunities for Collaboration Between the Defense and Entertainment Research Communities, Computer Science and Telecommunications Board, 1997-09-24 Summarizes the results of a workshop held Oct 1996 in Irvine Calif convened by the National Research Council's Computer Science and Telecommunications Board that brought together members of the entertainment and defense industries to discuss research interests in modeling and simulation The Rise of Games and High-Performance Computing for Modeling and Simulation National Research Council, Division on Engineering and Physical Sciences, Standing Committee on Technology Insightâ"Gauge, Evaluate, and Review, Committee on Modeling, Simulation, and Games, 2010-04-15 The technical and cultural boundaries between modeling simulation and games are increasingly blurring providing broader access to capabilities in modeling and simulation and further credibility to game based applications The purpose of this study is to provide a technical assessment of Modeling Simulation and Games MS associated vulnerabilities of risks to and impacts on critical defense capabilities and other significant indicators and warnings that can help prevent or mitigate surprises related to technology applications by those with hostile intent Finally this book recommends priorities for future action by appropriate departments of the intelligence community the Department of Defense research community and other government entities The Rise of Games and High Performance Computing for Modeling and Simulation will serve as a useful tutorial and reference document for this particular era in the evolution of MS G The book also highlights a number of rising capabilities facilitated by MS G to watch for in the coming years **Behavioral Modeling and Simulation** National Research Council, Division of Behavioral and Social Sciences and Education, Board on Behavioral, Cognitive, and Sensory Sciences, Committee on Organizational Modeling: From Individuals to Societies, 2008-07-04 Today's military missions have shifted away from fighting nation states using conventional weapons toward combating insurgents and terrorist networks in a battlespace in which the attitudes and behaviors of civilian noncombatants may be the primary effects of military actions To support these new missions the military services are increasingly interested in using models of the behavior of humans as individuals and in groups of various kinds and sizes Behavioral Modeling and Simulation reviews relevant individual organizational and societal IOS modeling research programs evaluates the strengths and weaknesses of the programs and their methodologies determines which have the greatest potential for military use and provides guidance for the design of a research program to effectively foster the development of IOS models useful to the military This book will be of interest to model developers operational military users of the models and their managers and government personnel making funding decisions regarding model development **Defense Modeling, Simulation, and Analysis** National Research Council, Division on Engineering and Physical Sciences, Board on Mathematical Sciences and Their Applications, Committee on Modeling and Simulation for Defense Transformation, 2006-10-22 Modeling simulation and analysis MS A is a crucial tool

for military affairs MS A is one of the announced pillars of a strategy for transforming the U S military Yet changes in the enterprise of MS A have not kept pace with the new demands arising from rapid changes in DOD processes and missions or with the rapid changes in the technology available to meet those demands To help address those concerns DOD asked the NRC to identify shortcomings in current practice of MS A and suggest where and how they should be resolved This report provides an assessment of the changing mission of DOD and environment in which it must operate an identification of high level opportunities for MS A research to address the expanded mission approaches for improving the interface between MS A practitioners and decision makers a discussion of training and continuing education of MS A practitioners and an examination of the need for coordinated military science research to support MS A

Simulation and Modeling of Systems of Systems Pascal

Cantot, Dominique Luzeaux, 2013-03-04 Systems engineering is the design of a complex interconnection of many elements a system to maximize a specific measure of system performance It consists of two parts modeling in which each element of the system and its performance criteria are described and optimization in which adjustable elements are tailored to allow peak performance Systems engineering is applied to vast numbers of problems in industry and the military An example of systems engineering at work is the control of the timing of thousands of city traffic lights to maximize traffic flow The complex and intricate field of electronics and computers is perfectly suited for systems engineering analysis and in turn advances in communications and computer technology have made more advanced systems engineering problems solvable Thus the two areas fed off of one another This book is a basic introduction to the use of models and methods in the engineering design of systems It is aimed at students as well as practicing engineers The concept of the systems of systems is discussed extensively after a critical comparison of the different definitions and a range of various practical illustrations It also provides key answers as to what a system of systems is and how its complexity can be mastered Joystick Soldiers Nina B.

Huntemann, Matthew Thomas Payne, 2009-09-10 Joystick Soldiers is the first anthology to examine the reciprocal relationship between militarism and video games War has been an integral theme of the games industry since the invention of the first video game Spacewar in 1962 While war video games began as entertainment military organizations soon saw their potential as combat simulation and recruitment tools A profitable and popular relationship was established between the video game industry and the military and continues today with video game franchises like America's Army which was developed by the U S Army as a public relations and recruitment tool This collection features all new essays that explore how modern warfare has been represented in and influenced by video games The contributors explore the history and political economy of video games and the military entertainment complex present textual analyses of military themed video games such as Metal Gear Solid and offer reception studies of gamers fandom and political activism within online gaming War and the Media Daya

Artificial War Andrew Ilachinski, 2004 Military conflicts particularly land combat possess the characteristics of complex adaptive systems combat forces are composed of a large number of nonlinearly interacting parts and are organized in a dynamic command and control network

local action which often appears disordered self organizes into long range order military conflicts by their nature proceed far from equilibrium military forces adapt to a changing combat environment and there is no master voice that dictates the actions of every soldier i e battlefield action is decentralized Nonetheless most modern state of the art military simulations ignore the self organizing properties of combat This book summarizes the results of a multiyear research effort aimed at exploring the applicability of complex adaptive systems theory to the study of warfare and introduces a sophisticated multiagent based simulation of combat called EINSTein EINSTein whose bottom up generative approach to modeling combat stands in stark contrast to the top down or reductionist philosophy that still underlies most conventional military models is designed to illustrate how many aspects of land combat may be understood as self organized emergent phenomena Used worldwide by the military operations research community EINSTein has pioneered the simulation of combat on a small to medium scale by using autonomous agents to model individual behaviors and personalities rather than hardware
