**Mathematics and Mechanics of Granular Materials** James M. Hill,A.P.S. Selvadurai,2005-12-27 Granular or particulate materials arise in almost every aspect of our lives including many familiar materials such as tea coffee sugar sand cement and powders At some stage almost every industrial process involves a particulate material and it is usually the cause of the disruption to the smooth running of the process In the natural environment understanding the behaviour of particulate materials is vital in many geophysical processes such as earthquakes landslides and avalanches This book is a collection of current research from some of the major contributors in the topic of modelling the behaviour of granular materials Papers from every area of current activity are included such as theoretical numerical engineering and computational approaches This book illustrates the numerous diverse approaches to one of the outstanding problems of modern continuum mechanics **Constitutive Modelling of Granular Materials** Dimitrios

Kolymbas,2012-12-06 In view of its extreme complexity the mathematical description of the mechanical behaviour of granular materials is an extremely difficult task Today many different models compete with each other However the complexity of the models hinders their comparison and the potential users are confused and often disencouraged This book is expected to serve as a milestone in the present situation to evaluate the present methods to clear up the situation to focus and encourage for further research activities Computational Modelling of Concrete Structures Gunther Meschke,René de Borst,Herbert Mang,Nenad Bicanic,2006-03-16 This conference proceedings brings together the work of researchers and practising engineers concerned with computational modelling of complex concrete reinforced concrete and prestressed

**Continuous and Discontinuous Modelling of Fracture in Concrete Using FEM** Jacek Tejchman, Jerzy Bobiński, 2012-07-28 The book analyzes a quasi static fracture process in concrete and reinforced concrete by means of constitutive models formulated within continuum mechanics A continuous and discontinuous modelling approach was used Using a continuous approach numerical analyses were performed using a finite element method and four different enhanced continuum models isotropic elasto plastic isotropic damage and anisotropic smeared crack one The models were equipped with a characteristic length of micro structure by means of a non local and a second gradient theory So they could properly describe the formation of localized zones with a certain thickness and spacing and a related deterministic size effect Using a discontinuous FE approach numerical results of cracks using a cohesive crack model and XFEM were presented which were also properly regularized Finite element analyses were performed with concrete elements under monotonic uniaxial compression uniaxial tension bending and shear extension Concrete beams under cyclic loading were also simulated using a coupled elasto plastic damage approach Numerical simulations were performed at macro and meso level of concrete A stochastic and deterministic size effect was carefully investigated In the case of reinforced concrete specimens FE calculations were carried out with bars slender and short beams columns corbels and tanks Tensile and shear failure mechanisms were studied Numerical results were compared with results from corresponding own and known in the scientific literature laboratory and full scale tests
