Modelling and Applications in Mathematics Education Peter L. Galbraith, Hans-Wolfgang Henn, Mogens Niss, 2007-12-05 Among the themes that have been central to mathematics education during the last 30 years are those of mathematical modelling and applications of mathematics to extra mathematical fields More generally we refer to these as relations between mathematics and the extra mathematical world some times also called the real world or preferably according to Henry Poincaré the rest of the world That applications and modelling have been important themes in mathematics education can be inferred from the wealth of literature on these topics including material generated from a multitude of national and international conferences In particular let us mention firstly the ICMEs the International Congresses on Mathematical Education with their regular working or topic groups and lectures on applications and modelling and secondly the series of ICTMAs the International Conferences on the Teaching of Mathematical Modelling and Applications which have been held biennially since 1983 Their Proceedings and Survey Lectures have addressed the state of the art at the relevant time and contain many examples studies conceptual contributions and resources involving relations between the real world and mathematics for all levels of the educational system In curricula and textbooks we find today many more references to real world phenomena and problems than say twenty years ago
