

learning exist across a broad taxonomic range? What are the common biological features of a learned response?

DISEASES AND AGING

This subject was chosen because of its close relationship to the mission of the NIH. The committee asked scientists studying certain pathological and aging processes to explain how information from model systems is most useful in furthering understanding and in developing treatment strategies for gerontological disorders and for certain selected disease states.

DEVELOPMENT

This workshop was designed to use phylogenetic breadth and experimental accessibility to examine the early stages of morphogenesis, to explore the underlying cellular and molecular mechanisms, and to identify common features. Particular emphasis was placed on induction and repression of gene expression.

THEORY (MATHEMATICAL MODELLING)

Unlike the case-study workshops, which were organized around particular biological problems or processes, participants examined the application of mathematical formulations to a variety of biological processes, ranging from the molecular level to the organismal level. Theory as used here refers to mathematical and computer models, which must be verified by comparison with biological systems.

THE WORKSHOP FORMATS

The case-study workshop participants were selected because their research lies at the frontier of their field and exemplifies new or extended use of models or model systems. Each workshop opened with an introductory talk by a leading researcher, who presented an overview of the field to be explored. This was followed by presentations of 8 to 10 papers, each 30 to 40 minutes in length. The participants were asked to present critical reviews of their specialty areas, giving special attention to the models or model systems used, their strengths and limitations, and their potentials for further development. Brief discussions followed each presentation. In a separate discussion session at the end of each workshop, participants and committee members were encouraged to comment and speculate about the general use and limitations of models, to give examples of the use of various models to elucidate important medical problems, and to comment on the transferability of information among biological systems.

Models For Biomedical Research A New Perspective:

Models for Biomedical Research National Research Council Staff, The Biology and History of Molecular Biology: New Perspectives Sahotra Sarkar, 1996-09-30 This book is a collection of papers which reflect the recent trends in the philosophy and history of molecular biology It brings together historians philosophers and molecular biologists who reflect on the discipline s emergence in the 1950 s its explosive growth and the directions in which it is going Questions addressed include i what are the limits of molecular biology ii What is the relation of molecular biology to older subdisciplines of biology especially biochemistry iii Are there theories in molecular biology iv If so how are these theories structured v What role did information theory play in the rise of molecular biology The book will open the way for many future researchers **Models for Biomedical Research** National Research Council (U.S.). Significant advances have been made in animal model development for biological research since the publication of the first edition of this volume and the ramifications of the FDA s Animal Efficacy Rule have become better understood in the scientific community With each chapter completely updated with the latest research findings **Biodefense Research Methodology and Animal Models Second Edition** spans the spectrum of coverage from basic research to advanced development of medical countermeasures Topics discussed in this volume include A history of biological agents as weapons from the use of corpses to contaminate water supplies to modern day anthrax attacks Concepts and strategies involved in biowarfare and bioterrorism The development validation and importance of animal models in biodefense research Infectious disease aerobiology Studies involving anthrax glanders plague tularemia Q fever alphaviruses orthopoxviruses and a new chapter on brucellosis Animal models for viral hemorrhagic fevers Botulinum and Ricin toxins Staphylococcal and streptococcal superantigens As the scientific community works diligently to protect the world s population from the misuse of infectious organisms and toxins it is imperative that researchers stay abreast of the latest techniques for biodefense research Exploring in vivo and in vitro assays this volume brings researchers up to date on the latest information on bacterial and viral infectious agents and biological toxins considered to pose the greatest threats to public safety In addition the contributors take a step toward minimizing the use of animals in further experiments by presenting documented findings that can be built upon

Behaving Kenneth F. Schaffner, 2016-05-02 *Behaving* presents an overview of the recent history and methodology of behavioral genetics and psychiatric genetics informed by a philosophical perspective. Kenneth F. Schaffner addresses a wide range of issues including genetic reductionism and determinism, free will and quantitative and molecular genetics. The latter covers newer genome wide association studies (GWAS) that have produced a paradigm shift in the subject and generated the problem of missing heritability. Schaffner also presents cases involving pro and con arguments for genetic testing for IQ and for Attention Deficit Hyperactivity Disorder (ADHD). Schaffner examines the nature/nurture controversy and Developmental Systems Theory using *C. elegans* or worm studies as a test case, concluding that genes are special and provide powerful tools including deep homology for investigating behavior. He offers a novel account of biological knowledge emphasizing the importance of models, mechanisms, pathways and networks which clarifies how partial reductions provide explanations of traits and disorders. The book also includes examinations of personality genetics and of schizophrenia and its etiology alongside interviews with prominent researchers in the area and discusses debates about psychosis that led to changes in the DSM 5 in 2013. Schaffner concludes by discussing additional philosophical implications of the genetic analyses in the book, some major worries about free will and arguments pro and con about why genes and DNA are so special. Though genes are special, newer perspectives presented in this book will be needed for progress in behavioral genetics: perspectives that situate genes in complex multilevel prototypic pathways and networks. With a mix of optimism and pessimism about the state of the field and the subject, Schaffner's book will be of interest to scholars in the history and philosophy of science, medicine and psychiatry.

Discovery Science Klaus P. Jantke, Ayumi Shinohara, 2003-06-30 These are the conference proceedings of the 4th International Conference on Discovery Science (DS 2001). Although discovery is naturally ubiquitous in science and scientific discovery itself has been subject to scientific investigation for centuries, the term Discovery Science is comparably new. It came up in connection with the Japanese Discovery Science project of Arikawa's invited lecture on The Discovery Science Project in Japan in the present volume some time during the last few years. Setsuo Arikawa is the father in spirit of the Discovery Science conference series. He led the above mentioned project and he is currently serving as the chairman of the international steering committee for the Discovery Science conference series. The other members of this board are currently in alphabetical order: Klaus P. Jantke, Masahiko Sato, Ayumi Shinohara, Carl H. Smith and Thomas Zeugmann. Colleagues and friends from all over the world took the opportunity of meeting for this conference to celebrate Arikawa's 60th birthday and to pay tribute to his manifold contributions to science in general and to Learning Theory and Discovery Science in particular. Algorithmic Learning Theory (ALT) for short is another conference series initiated by Setsuo Arikawa in Japan in 1990. In 1994 it amalgamated with the conference series on Analogical and Inductive Inference (AII) when ALT was held outside of Japan for the first time.
