Models of Spatial Inequality Robert Paynter, 1982 **The Sociology of Spatial Inequality** Linda M. Lobao, Gregory Hooks, Ann R. Tickamyer, 2012-02-01 2007 CHOICE Outstanding Academic Title Sociologists have too often discounted the role of space in inequality This book showcases a recent generation of inquiry that attends to poverty prosperity and power across a range of territories and their populations within the United States addressing spatial inequality as a thematically distinct body of work that spans sociological research traditions The contributors various perspectives offer an agenda for future action to bridge sociology s diverse and often narrowly focused spatial and inequality traditions *Inequalities in Geographical Space* Clementine Cottineau, Julie Vallee, 2022-12-28 Inequalities are central to the public debate and social science research They are inextricably linked to geographical space shaping human mobility and migration patterns creating diverse living environments and changing individuals perceptions of the society they live in and the inequalities that endure within it Geographical space contributes to the emergence and perpetuation of inequalities between individuals according to their socioeconomic position gender ethno racial origin or even their age Inequalities in Geographical Space examines inequalities in education in the workplace in public and private spaces and those related to migration Written by geographers sociologists and economists this book draws on a variety of theoretical and methodological approaches and compares different spatial and temporal scales It highlights the importance of geographical space as a vehicle for the expression creation and reproduction of social racial economic and gender inequalities **Urbanization and Growth** Michael Spence, Patricia Clarke Annez, Robert M. Buckley, 2008-11-26 Why is productivity higher in cities Does urbanization cause growth or does growth cause urbanization Do countries achieve rapid growth or high incomes without urbanization How can policy makers reap the benefits of urbanization without paying too high a cost Does supporting urbanization imply neglecting rural areas Why do so few governments welcome urbanization What should governments do to improve housing conditions in cities as they urbanize Are innovations in housing finance a blessing or a curse for developing countries How will governments finance the trillions of dollars of infrastructure spending needed for cities in developing countries First in a series of thematic volumes this book was prepared for the Commission on Growth and Development to evaluate the state of knowledge of the relationship between urbanization and economic growth It does not pretend to provide all the answers but it does identify insights and policy levers to help countries make urbanization work as part of a national growth strategy It examines a variety of topics the relevance and policy implications of recent advances in urban economics for developing countries the role of economic geography in global economic trends and trade patterns the impacts of urbanization on spatial inequality within countries and alternative approaches to financing the substantial infrastructure investments required in developing country cities Written by prominent academics in their fields Urbanization and Growth seeks to create a better understanding of the role of urbanization in growth and to inform policy makers tackling the formidable challenges it poses

economists to the empirical analysis of regional and spatial data However even if the methodology for econometric treatment of spatial data is well developed there does not exist a textbook theoretically grounded well motivated and easily accessible to economists who are not specialists Spatial econometric techniques receive little or no attention in the major econometric textbooks Very occasionally the standard econometric textbooks devote a few paragraphs to the subject but most of them simply ignore the subject On the other hand spatial econometric books such as Anselin 1988 or Anselin Florax and Rey 2004 provide comprehensive and exhaustive treatments of the topic but are not always easily accessible for people whose main degree is not in quantitative economics or statistics This book aims at bridging the gap between economic theory and spatial statistical methods It starts by strongly motivating the reader towards the problem with examples based on real data then provides a rigorous treatment founded on stochastic fields theory of the basic spatial linear model and finally discusses the simpler cases of violation of the classical regression assumptions that occur when dealing with spatial data **Practical**

Microsimulation Modelling Cathal O'Donoghue, 2021-09-23 The purpose of this book is to bring together for the first time a description and examples of the main methods used in microsimulation modelling used in the field of income distribution analysis It is structured to develop and use the different types of models used in the field with a focus on household targeted policy The book aims to provide a greater degree of codified knowledge by providing a practical guide to developing and using microsimulation models At present the training of researchers and analysts that use and develop microsimulation modelling is done on a relatively ad hoc basis through occasional training programmes and lecture series built around lecture notes Practical Microsimulation Modelling enables a more formalised and organised approach Each chapter addresses a separate modelling approach in a similar consistent way describing in a practical way the key methodological skills for each approach New Models In Geography Richard Peet, Nigel Thrift, 2013-10-11 First published in 1989 It seems such a long

time ago another age yet it is a mere twenty odd years since the original Models in Geography was published It is an even shorter time since the first tentative steps were taken towards an alternative formulation of what might constitute a geographical perspective within the social sciences What came to be called the political economy perspective has progressed with remarkable speed and energy to generate its own framework of conceptualization and analysis its own questions and debates The papers in these two volumes are witness to the richness and range of the work which has developed over this relatively short period within the political economy approach Moreover from being a debate within an institutionally defined discipline of geography to introducing into that discipline ideas and discussions from the wider fields of philosophy and social science and the humanities more generally it has now flowered into a consistent part of enquiries that span the entire realm of social studies **Encyclopedia of Geography** Barney Warf, 2010-09-21 Simply stated geography studies the locations of things and the explanations that underlie spatial distributions Profound forces at work throughout the world have made geographical knowledge increasingly important for understanding numerous human dilemmas and our capacities to address

them With more than 1 200 entries the Encyclopedia of Geography reflects how the growth of geography has propelled a demand for intermediaries between the abstract language of academia and the ordinary language of everyday life The six volumes of this encyclopedia encapsulate a diverse array of topics to offer a comprehensive and useful summary of the state of the discipline in the early 21st century Key Features Gives a concise historical sketch of geography s long rich and fascinating history including human geography physical geography and GIS Provides succinct summaries of trends such as globalization environmental destruction new geospatial technologies and cyberspace Decomposes geography into the six broad subject areas physical geography human geography nature and society methods models and GIS history of geography and geographer biographies geographic organizations and important social movements Provides hundreds of color illustrations and images that lend depth and realism to the text Includes a special map section Key Themes Physical Geography Human Geography Nature and Society Methods Models and GIS People Organizations and Movements History of Geography This encyclopedia strategically reflects the enormous diversity of the discipline the multiple meanings of space itself and the diverse views of geographers It brings together the diversity of geographical knowledge making it an invaluable resource for any academic library [International Encyclopedia of Human Geography](#) ,2019-11-29 International Encyclopedia of Human Geography Second Edition Fourteen Volume Set embraces diversity by design and captures the ways in which humans share places and view differences based on gender race nationality location and other factors in other words the things that make people and places different Questions of for example politics economics race relations and migration are introduced and discussed through a geographical lens This updated edition will assist readers in their research by providing factual information historical perspectives theoretical approaches reviews of literature and provocative topical discussions that will stimulate creative thinking Presents the most up to date and comprehensive coverage on the topic of human geography Contains extensive scope and depth of coverage Emphasizes how geographers interact with understand and contribute to problem solving in the contemporary world Places an emphasis on how geography is relevant in a social and interdisciplinary context *The Changing Space Economy of City-Regions* Koech Cheruiyot,2017-10-30 This book addresses the South African Space Economy and its stark disparities and dualisms through an assessment of the Gauteng City Region the largest economic agglomeration in the country and on a continent bedevilled by a myriad of development challenges The book s focus on understanding the overall character of Gauteng City Region s Space Economy through data mining analysis and mapping comprehensively supplements the Space Economy literature on the region It covers the disparities exacerbated by an overlay of apartheid planning ideology and top down regional development based on selective encouragement of manufacturing investments in growth points or poles and how implementation of past policies intended to cure these disparities have yielded mixed results This book further offers the Gauteng City Region as a microcosm of the national economy in the form of evident significant placed based variations in the intensity and character of economic
