

Models of Urban Structure

Concentric zone model

- Central business district
- Factory zone
- Zone of transition
- Zone of working men's homes
- Residential zone
- Commuters' zone

Land use is arranged in a series of concentric rings or zones around the city centre. The idea is that the city has grown outward in all directions from the centre, adding new buildings around the edges. The process is rather like the growth rings of trees. It means that the urban fabric should get older towards the centre. The width of the zones varies according to the density of building.

Sector model

- Central business district
- Wholesale light manufacturing
- Low-class residential
- Medium-class residential
- High-class residential

Land use is arranged in wedges or sectors which radiate from the city centre. Growth follows a linear pattern along major transport routes or physical features such as river valleys. We assume that once a particular type of land use establishes itself in an area, it attracts similar activities (like industry) and repels dissimilar ones (like high-status housing).

Multiple nuclei model

- Central business district
- Wholesale and light manufacturing
- Low-class residential
- Medium-class residential
- High-class residential
- Heavy manufacturing
- Outlying business district
- Industrial suburb

Distinctive land uses form small areas or nuclei such as the central business district, housing estates, industrial estates, and office and retail parks. Often similar activities/types of land use benefit from being clustered together.

Models of Urban & Regional Systems in Developing Countries George Chadwick,2016-01-22 This work is concerned with the understanding of the structure and behaviour of urban and regional systems in developing countries Professor Chadwick considers not only how such systems change but also how they might be changed by some form of manipulation Both these purposes necessarily involve the activity of modelling the systems concerned This study has been enriched by the author s own experience in Bahrain Hong Kong Korea and Saudi Arabia **Urban Geography**

Michael Pacione,2009 This is the most comprehensive and readable book on urban geography in the array of contemporary literature on the subject Mobility Patterns and Urban Structure Paulo Pinho,Cecília Silva,2016-03-03

Despite extensive efforts to understand the overall effect of urban structure on the current patterns of urban mobility we are still far from a consensual perspective on this complex matter To help build agreement on the factors influencing travel behaviour this book discusses the influence of alternative urban structures on sustainable mobility Bringing together two existing and complementary methods to study the relationship between urban structure and mobility the authors compare two case studies with distinct urban structures and travel behaviour Copenhagen and Oporto Of particular concern is the influence of urban structure factors namely land use and transport system factors and motivational factors related to the social economic and cultural characteristics of the individual traveller The research presented in this book highlights the relevance of centrality in travel behaviour and in more sustainable travel choices Different operational forms of the centrality concept are revealed as important it is shown that more sustainable travel can be influenced by several urban structure factors and that no particular combination is required as long as a certain level of centrality is provided Finally the book concludes that urban structure can on the one hand constrain and on the other hand influence travel choice *Household Choice and Urban Structure*

Paul A. Waddell,2018-08-10 Published in 1997 The aim of this book is to explore urban modelling traditions identify key limitations and contributions and to develop a more general model within a discrete choice framework The scope of the effort is on household choices regarding residential location workplace and housing tenure It is the first systematic effort to analyze the structure and sequence of the choices made by households regarding residential location and workplace The implications for urban theory model development and policy analysis are substantial Modelling Urban Development with Geographical Information Systems and Cellular Automata

Yan Liu,2008-12-10 Urban development and migration from rural to urban areas are impacting prime agricultural land and natural landscapes particularly in the less developed countries These phenomena will persist and require serious study by those monitoring global environmental change To address this need various models have been devised to analyze urbanization a *Models of Urban Structure* Bryan H. Geospatial Analysis and Modelling of Urban Structure and Dynamics Bin Jiang, Xiaobai Yao, 2010-06-16 A Coming of Age Geospatial Analysis and Modelling in the Early Twenty First Century Forty years ago when spatial analysis first emerged as a distinct theme within geography's quantitative revolution the focus was largely on consistent methods for measuring spatial correlation The concept of spatial autocorrelation took pride of place mirroring concerns in time series analysis about similar kinds of dependence known to distort the standard probability theory used to derive appropriate statistics Early applications of spatial correlation tended to reflect geographical patterns expressed as points The perspective taken on such analytical thinking was founded on induction the search for pattern in data with a view to suggesting appropriate hypotheses which could subsequently be tested In parallel but using very different techniques came the development of a more deductive style of analysis based on modelling and thence simulation Here the focus was on translating prior theory into forms for generating testable predictions whose outcomes could be compared with observations about some system or phenomenon of interest In the intervening years spatial analysis has broadened to embrace both inductive and deductive approaches often combining both in different mixes for the variety of problems to which it is now applied
