New Types of Transitive Functions and Minimal Systems

Mohammed Nokhas Murad

Abstract-- The purpose of this paper is to give new types of topological b-transitive functions and new types of b-minimal functions. We obtain their characterizations and investigate some of its properties. The main results are the following propositions:

1) Every topologically b-transitive function is a topological transitive function as every open set is b-open set but the converse not necessarily true.

2) Every b-minimal function is a minimal function as every open set is b- open set, but the converse not necessarily true.

Keyword: Topologically b- transitive, b- minimal functions, b- continuous, b- irresolute

I.   INTRODUCTION

Functions and of course irresolute functions stand among the most important notions in the whole of mathematical science. Various interesting problems arise when one considers openness. Its importance is significant in various areas of mathematics and related sciences. In 1972, Crossley and Hildebrand [17] introduced the notion of irresoluteness. . Many different forms of irresolute functions have been introduced over the years. Andrijevic [2] introduced a new class of generalized open sets in a topological space, the so-called b-open sets. This type of sets was discussed by Ekici and Caldas [5] under the name of -open sets. The class of b-open sets is contained in the class of semi-preopen sets and contains all semi-open sets and preopen sets. The class of b-open sets generates the same topology as the class of preopen sets. A subset A of (X, τ) is said to be b-open [2] (or γ-open [5]) (resp. α-open [6]) if $A \subseteq Int(Cl(A)) \cup Cl(Int(A))$ (resp. $A \subseteq Int(Cl(Int(A)))$). The complement of b-open set is called b-closed. The family of all b-open (resp. α-open) subsets of (X, τ) will be denoted by BO (X) (resp. τ^{α} or αO(X)). Throughout this paper, the word "space "will mean

topological space. Recently there has been some interest in the notion of a locally closed subset of a space. According to Bourbaki [16] a subset S of a space (X, τ) is called locally closed if it is the intersection of an open set and a closed set. Ganster and Reilly used locally closed sets in [13] and [14] to define the concept of LC-continuity, i.e. a function $f : (X, \tau) \rightarrow (X, \sigma)$ is LC-continuous if the inverse with respect to f of any open set in Y is closed in X. The study of semi open sets and semi continuity in topological spaces was initiated by Levine [6]. Bhattacharya and Lahiri [8] introduced the concept of semi generalized closed sets in topological spaces analogous to generalized closed sets which was introduced by Levine [5]. The collections of semi-open, semi-closed sets and α-sets in (X, τ) will be denoted by $SO(X, \tau)$, $SC(X, \tau)$ and τ^{α} respectively. Njastad [7] has shown that τ^{α} is a topology on X with the following properties: $\tau \subseteq \tau^{\alpha}$, $(\tau^{\alpha})^{\alpha} = \tau^{\alpha}$ and $S \in \tau^{\alpha}$ if and only if $S = U \setminus N$ where $U \in \tau$ and N is nowhere dense (i.e. $Int(Cl(N)) = \varphi$) in (X, τ). Hence $\tau = \tau^{\alpha}$ if and only if every nowhere dense (nwd) set in (X, τ) is closed. Clearly every α-set is semi-open and every nwd set in (X, τ) is semi-closed. Andrijevic [1] has observed that $SO(X, \tau^{\alpha}) = SO(X, \tau)$, and that $N \subseteq X$ is nwd in $(X, \tau^{\alpha}) \Leftrightarrow N$ is nwd in (X, τ) In this paper, we will define a new class of topological transitive maps called topological b- transitive and a new class of b- minimal functions. We will also study some of their properties.

II.   PRELIMINARIES AND DEFINITIONS

In this section, we recall some of the basic definitions. Let X be a space and $A \subseteq X$. The intersection (resp. closure) of A is denoted by Int(A) (resp. Cl(A).

Definition 2.1

[6] A subset A of a topological space X will be termed semi-open (written S.O.) if and only if there exists an open set U such that $U \subseteq A \subseteq Cl(U)$.
