Myjak-Pycia, 2025-06-12 Filling an important gap in design history Another Modernism examines how domestic space was conceived by the US home economics movement in the first half of the 20th century In doing so it tells the story of how home economists mainly women developed design that challenged the traditional architecture of American farm communities and countered the approach of modernist architects Uncovering unacknowledged contributions of women to domestic architecture and design history it reveals early instances of participation sustainability and accommodating the disabled body in domestic design In contrast to the canonical modernist model of space which is primarily visual home economists centered on a user who interacts with the interior in a tactile bodily way Although both strove for efficiency they understood it

differently whereas for many of the mainstream modernists the term efficiency meant functionalist aesthetics for home economists it signified design solutions intended to ease the labor of an average American homemaker The book argues that the home economists focus on tactility the user s corporeality movement access preferences and her engagement in the design process constituted an alternative model of modern architecture a popular and largely rural modernism centered on the specificity of the female user and her personal experience of the domestic interior Based on little known archival material and with an emphasis on mostly female researchers designers and users occupants Another Modernism will appeal to architects design historians and anyone interested in gender women s and disability studies as well as non visual approaches to design
