*Modern Management of the High-technology Enterprise* John E. Gibson, 1990      *Modern Management based on Big Data I* A.J. Tallón-Ballesteros, 2020-11-17 The management of any modern organisation involves data but the volume of information has become almost impossible for even the most up to date computer system to handle Fortunately big data technologies are now enabling new ways of dealing with the flood of information making an approximate solution possible in a reasonable time frame as an alternative to waiting for an exact result taking much longer This book contains the 17 papers presented at the inaugural conference of the new series Modern Management based on Big Data MMBD 2020 The conference was originally scheduled to be held in Beijing China but due to measures to prevent the spread of the COVID 19 pandemic the conference was held online from 18 21 October 2020 As its name suggests the conference covers the connected aspects of Big Data and Modern Management and the 17 papers included here accepted from a total of 68 submissions cover topics including data capture and storage search sharing and analytics data visualization machine learning algorithms for big data distributed file systems and databases management strategy and decision making manufacturing and logistics systems total quality management management information systems human factor engineering and human resources Providing an overview of current developments in modern management based on Big Data the book will be of interest to all those working in the field      *Globalizing China* Huiyao Wang, 2012-11-05 Examines the literature on the returnee phenomena and assesses the impact and influence of Chinese Returnee Entrepreneurs This book evaluates the impact of Chinese Returnee Entrepreneurs CREs in the Chinese globalization process It also examines the roles drivers strategies and performances of CREs on environment strategy linkages      **Digital Dragon** Adam Segal, 2011-02-23 During the economic reforms of the last twenty years China adopted a wide array of policies designed to raise its technological capability and foster industrial growth Ideologically the government would not promote private ownership firms and instead created a hybrid concept that of nongovernmental enterprises or minying qiye Adam Segal examines the minying experience particularly in high technology in four key regions Beijing Shanghai Xi an and Guangzhou Minying enterprises have been neither clear successes nor abject failures Segal finds Instead outcomes varied though efforts to create a core of innovative high tech firms succeeded in Beijing minying enterprises elsewhere have languished He points to variations in local implementation of government policies on investment property rights regulation and government supervision as a key to the different outcomes He explains these peculiarities of implementation by putting official decisions within their local contexts Extending his analysis he compares the experience of creating technology enterprises in China with those of Korea the chaebol system and Taiwan enterprise groups Based on interviews with entrepreneurs and local government officials as well as numerous published primary sources Digital Dragon is the first detailed look at a major Chinese institutional experiment and at high tech endeavors in China Can China become a true global economic power The evolution of the high technologies

*Modern Management Based on Big Data III* A.J. Tallón-Ballesteros,2022-09-29 Data is the basic ingredient of all Big Data applications and Big Data technologies are constantly deploying new strategies to maximise efficiency and reduce the time taken to process information This book presents the proceedings of MMBD2022 the third edition of the conference series Modern Management based on Big Data MMBD The conference was originally scheduled to take place from 15 to 18 August 2022 in Seoul South Korea but was changed to a virtual event on the same dates Some 200 submissions were received for presentation at the conference 52 of which were ultimately accepted after exhaustive review by members of the programme committee and peer reviewers who took into account the breadth and depth of the research topics and the scope of MMBD Topics covered include data analytics modelling technologies and visualization architectures for parallel processing systems data mining tools and techniques machine learning algorithms and big data for engineering applications There are also papers covering modern management including topics such as strategy decision making manufacturing and logistics based systems engineering economy information systems and law based information treatment and papers from a special session covering big data in manufacturing retail healthcare accounting banking education global trading and e commerce Big data analysis and emerging applications were popular topics The book includes many innovative and original ideas as well as results of general significance all supported by clear and rigorous reasoning and compelling evidence and methods and will be of interest to all those working with Big Data **Manufacturing Systems** National Academy of Engineering,Committee on Foundations of Manufacturing,1992-02-01 Some 70 percent of U S manufacturing output currently faces direct foreign competition While American firms understand the individual components of their manufacturing processes they must begin to work with manufacturing systems to develop world class capabilities This new book identifies principles termed foundations that have proved effective in improving manufacturing systems Authored by an expert panel including manufacturing executives the book provides recommendations for manufacturers leading to specific action in three areas Management philosophy and practice Methods used to measure and predict the performance of systems Organizational learning and improving system performance through technology The volume includes in depth studies of several key issues in manufacturing including employee involvement and empowerment using learning curves to improve quality measuring performance against that of the competition focusing on customer satisfaction and factory modernization It includes a unique paper on jazz music as a metaphor for participative manufacturing management Executives managers engineers researchers faculty and students will find this book an essential tool for guiding this nation's businesses toward developing more competitive manufacturing systems **The Modern Lean Enterprise** Alexander Tsigkas,2022-01-20 The book addresses a

modern reorientation of Lean abandoning the classical waste dogma that brings direct efficiency gains and substituting by a way to achieving indirect efficiency in a continuous and sustainable manner Waste is the output of a process that cannot be of further use while value is a matter of valuation a process whose output we conceive to be of further use Value and waste are not antithetical they are just not comparable issues We achieve added value to the modern Lean Enterprise through synergies that bring sustainable economic benefits to the company Such synergies use the complementarity theory developed by Milgrom and Roberts in 1990 on the principle that we can achieve maximal gains via the joint investment on complement activities and not investing Complementarity is not something specific to Lean Enterprises however Lean Enterprises can benefit the most from such a concept The reason is that Lean uses the principle of achieving more with less effort Less effort does not mean the use of fewer resources but the use of resources in a complementary way in order to achieve more rather than using them Complementarity is a feature by design Complementarity by design will help modern Lean companies have an easier transition in the digital era and the new world of Industry 4 0 In this second edition we have preserved the method of how to achieve Lean and have enhanced it to show how to move towards modern Lean within Industry 4 0 paradigm However if a company has not yet made the Lean step there is no need to make that step first before yielding the benefits Technology is the key Modern Lean Enterprise strengthens out of the old paradigm into the new one of Industry 4 0 Because of evolution such an enterprise achieves optimal technological complementarity necessary for synergies that sustain increasing profits
