English in China Emily Tsz Yan Fong, 2021-03-29 This volume

explores Chinese identity through the lens of both the Chinese and English languages. Until the twentieth century, English was a language associated with capitalists and military aggressors in China. However, the massive progression of globalisation in China following the 1980s has transformed the language into an important tool for China's modernisation. Regardless of the role English plays in China, there has always been a fear that the spread of culture associated with English would lead to weakening of the Chinese identity. This fear resulted in the development of the *ti yong* principle: Chinese learning for essence, *ti* Western learning for utility, *yong*. Fong's book aims to enhance understanding of the *ti yong* dichotomy in relation to people's sense of being Chinese in China, the penetration of English into non-English speaking societies, the resultant tensions in people's sense of personal and national identity and their place in the world. Using Q methodology, the book presents observations based on data collected from four participant groups: namely, high school and university students, teachers and parents in China, to investigate their perspectives on the status and roles of English as well as those of Chinese. Considering the growing international interest in China, this volume will appeal to readers interested in China's contemporary society in general, its language culture and identity. It will be a useful resource for academics, researchers and students in the field of applied linguistics, language education and Chinese cultural studies and can also be adopted as a reference book for undergraduate courses relating to language identity and culture.

The Rise of Chinese as a Global Language Jeffrey Gil, 2021-06-07. This book investigates the macroacquisition of Chinese: its large-scale acquisition and adoption for various purposes by individuals, governments and organisations, and the implications of this process for the future of English as a global language. The author contextualises the macroacquisition of Chinese within the global ecology of languages, then analyses the factors responsible for the macroacquisition of Chinese, showing in contrast to most academic and popular commentary that a character-based writing system will not stop Chinese from becoming a global language. He then articulates three possible future scenarios: English remaining a dominant global language; English and Chinese both being global languages; and Chinese becoming a global language instead of English. The book concludes by outlining directions for further research on the acquisition and use of Chinese around the world. It will be of interest to students and scholars with an interest in English as a global language, Chinese as a second foreign language, language education policy and applied linguistics more generally.

Hybridity in Translated Chinese Guangrong Dai, 2016-05-20. This book investigates the characteristics of hybridity in Chinese texts that have been translated from English. It also explores the potential impact of translation and hybridity on written Chinese over the past 70 years. It suggests that English-Chinese translations have introduced more and more hybrid structures into Chinese. This book can help us with understanding language change and development and it can also shed new light on the translation process and help identify translation norms.

resemble each other in the categories constructions and types of meaning they use and in the forms they employ to express these Such resemblances may be the consequence of universal characteristics of language of chance or coincidence of the borrowing by one language of another s words or of the diffusion of grammatical phonetic and phonological characteristics that takes place when languages come into contact Languages sometimes show likeness because they have borrowed not from each other but from a third language Languages that come from the same ancestor may have similar grammatical categories and meanings expressed by similar forms such languages are said to be genetically affiliated This book considers how and why forms and meanings of different languages at different times may resemble one another Its editors and authors aim a to explain and identify the relationship between areal diffusion and the genetic development of languages and b to discover the means of distinguishing what may cause one language to share the characteristics of another The introduction outlines the issues that underlie these aims introduces the chapters which follow and comments on recurrent conclusions by the contributors The problems are formidable and the pitfalls numerous for example several of the authors draw attention to the inadequacy of the family tree diagram as the main metaphor for language relationship The authors range over Ancient Anatolia Modern Anatolia Australia Amazonia Oceania Southeast and East Asia and Sub Saharan Africa The book includes an archaeologist s view on what material evidence offers to explain cultural and linguistic change and a general discussion of which kinds of linguistic feature can and cannot be borrowed The chapters are accessibly written and illustrated by twenty maps The book will interest all students of the causes and consequences of language change and evolution
