Modern Introduction To Energy Economics:

Energy Economics: A Modern Introduction Ferdinand E. Banks, 2012-12-06 Energy is the go of things as James Clerk Maxwell pointed out This th simple truth was largely overlooked during the first 70 years of the 20 century because in the industrial world most politicians civil servants and opinion makers were inclined to believe that virtually an infinite supply of reasonably priced energy would always be available and so things would continue to go in the manner to which many of their constituents and admirers had become accustomed Similar opinions were held about fresh air and water for consumption and agricultural uses As a result it was not until the last two decades of the century that serious courses in energy and environmental economics began to be offered at institutions of higher learning around the world This book is intended as a comprehensive introductory text and or reference book for courses of this nature having to do with energy economics I have also attempted to make the book useful for self study As far as I know there are no energy economics text or reference books on the level of this book in the English language Needless to say if I am wrong then I apologise to their authors but right or wrong I would like to see more energy economics books of all descriptions now We cannot afford to have the same kind of mistakes made with energy policy that in much of the world are being made with e g employment policy

Urbaniec,2013-10-22 This book is devoted to the problems of identifying the potential for designing and implementing energy saving measures in beet sugar factories As the sugar industries in various countries differ considerably with respect to the economic conditions for factory operation and the level of technological development the problem range is very broad It may include the elimination of faulty or unreliable auxiliary equipment or the introduction of simple improvements in vapour distribution schemes in factories operated in countries where the need for efficient energy utilization has not really been very urgent until now On the other hand there are sugar factories in some other countries where considerable achievements have been made in energy saving but where further progress may still be possible if more advanced engineering problems are solved The author takes an interdisciplinary approach to its subject aimed at demonstrating how the energy demand of a sugar factory can be affected by the interactions between a number of factors namely layout and parameters of the energy conversion and distribution processes layout and parameters of the sugar manufacturing process and by processes characteristics of the equipment and control systems completeness and accuracy of the energy monitoring systems The book consists essentially of three parts In Chapters 1 to 3 some theoretical background is given and engineering principles for creating efficient energy conversion and utilization subsystems in sugar factories are reviewed The second part Chapters 4 to 7 discusses recent developments in these areas and their importance to energy conversion and utilization in sugar factories The presentation is illustrated with suitable practically oriented examples based mostly on the author's experience gained from nine years working with an engineering company specializing in the design erection and modernization of sugar factories as well as five years of consulting and research for the sugar industry Short

examples are presented in Chapters 1 2 3 and 7 while in the third part of the book Chapters 8 and 9 summaries are given of real life design analyses of energy subsystems of sugar factories characterized by different levels of sophistication of the energy economy The book thus provides a systematic review which will be helpful to managers and technologists in sugar factories where the problem may arise of choosing the most appropriate set of measures that best fit the factory s unique needs It can also be used in university level courses on the energy economy of sugar factories and will be of interest to design engineers and specialists engaged in research in the area
