On The Winds And Waves Of Imagination:

The Mechanisation of Aristotelianism Cornelis Hendrik Leijenhorst, Cees Leijenhorst, 2002 An acclaimed study now available for the first time in English investigates the relation between Thomas Hobbes natural philosophy as represented in his *Prima Philosophia* the second part of *De corpore* 1655 and the various currents of Renaissance and early modern Aristotelianism

Research in African Literatures, 2003 Vol 1 spring 1970 include A Bibliography of American doctoral dissertations on African literature compiled by Nancy J Schmidt

Wind Waves Blair Kinsman, 1984-01-01 In this classic study a renowned student of ocean wave theory examines the data requirements and details of the power spectral analysis required to make the wave revolution intelligible Although the discussions center on waves once the techniques are understood they can be applied to many other areas After outlining the nature of waves and wave processes and their methods of measurement and classification the author provides a detailed exploration that relies heavily on mathematical models Topics include perturbations of irrotational motion energy considerations wave generations by wind and much more The text is enhanced and clarified by 270 photos figures and tables A helpful bibliography and indexes conclude this indispensable addition to the oceanographer's library

On the Winds and Waves of Imagination Constance S. Richards, 2000 First published in 2000 Routledge is an imprint of Taylor Francis an informal company

The Mechanization of Aristotelianism Cees Leijenhorst, 2021-11-01 This book discusses the Aristotelian setting of Thomas Hobbes' main work on natural philosophy *De Corpore* 1655 Leijenhorst's study puts particular emphasis on the second part of the work entitled *Philosophia Prima* Although Hobbes presents his mechanistic philosophy of nature as an outright replacement of Aristotelian physics he continued to use the vocabulary and arguments of sixteenth and seventeenth century Aristotelianism Leijenhorst shows that while in some cases this common vocabulary hides profound conceptual innovations in other cases Hobbes' self-proclaimed new philosophy is simply old wine in new sacks Leijenhorst's book substantially enriches our insight in the complexity of the rise of modern philosophy and the way it struggled with the Aristotelian heritage

Victorian Science and Imagery Nancy Rose Marshall, 2021-07-27 The nineteenth century was a period of science and imagery when scientific theories and discoveries challenged longstanding boundaries between animal plant and human and when art and visual culture produced new notions about the place of the human in the natural world Just as scientists

relied on graphic representation to conceptualize their ideas artists moved seamlessly between scientific debate and creative expression to support or contradict popular scientific theories such as Darwin s theory of evolution and sexual selection deliberately drawing on concepts in ways that allowed them to refute popular claims or disrupt conventional knowledges Focusing on the close kinship between the arts and sciences during the Victorian period the art historians contributing to this volume reveal the unique ways in which nineteenth century British and American visual culture participated in making science and in which science informed art at a crucial moment in the history of the development of the modern world Together they explore topics in geology meteorology medicine anatomy evolution and zoology as well as a range of media from photography to oil painting They remind us that science and art are not tightly compartmentalized separate influences Rather these are fields that share forms manifest as waves layers lines or geometries that invest in the idea of the evolution of form and that generate surprisingly kindred responses such as pain pleasure empathy and sympathy **The Curious**
