Ring-opening Polymerization Takeo Saegusa, Eric J. Goethals, American Chemical Society. Division of Polymer Chemistry, 1977 Handbook of Ring-Opening Polymerization Philippe Dubois, Olivier Coulembier, Jean-Marie Raquez, 2008-12-17 This comprehensive truly one stop reference discusses monomers methods stereochemistry industrial applications and more Chapters written by internationally acclaimed experts in their respective fields cover both basic principles and up to date information ranging from the controlled ring opening polymerization methods to polymer materials of industrial interest All main classes of monomers including heterocyclics cyclic olefins and alkynes and cycloalkanes are discussed separately as well as their specificities regarding the ring opening polymerization techniques the mechanisms the degree of control the properties of the related polymers and their applications The two last chapters are devoted to the implementation of green chemistry in ring opening polymerization processes Of much interest to chemists in academia and industry **Ring-opening Polymerization** Kenneth John Ivin, Takeo Saegusa, 1984 **Ring-opening Polymerization**, 1985 **Ring-opening Polymerization** Daniel J. Spassky, 1995 The general features of ring opening polymerisation for example the dependence of polymerisability upon ring strain the significance of ring chain equilibria and the potential for formation of cyclic oligomers are outlined An additional indexed section containing several hundred abstracts from the Rapra Polymer Library database provides useful references for further reading Models of Biopolymers By Ring-Opening Polymerization Stanislaw Penczek, 1989-12-01 There are a number of methods used to synthetically prepare biopolymers their models and bioanalogous polymers This work approaches the syntheses of the three major groups of biopolymers existing in nature polypeptides polysaccharides and nucleic and teichoic acids by ring opening polymerization Until now this method has never been reviewed uniformly for these three groups The majority of models prepared by ring opening polymerization can not reach the complexity of the actual biological molecules However a better understanding of these biopolymers will aid in the use of such molecules in several fields of application in research and other high technologies where they mimic functions of related biopolymers in living organisms Ring Opening Metathesis Polymerisation and Related Chemistry Ezat Khosravi, T. Szymanska-Buzar, 2012-12-06 Since the last ASI in Turkey in Sept 1995 the olefin metathesis has made remarkable strong developments with an incredible speed in various directions New catalyst systems have been developed which have resulted in the synthesis of novel materials Other fascinating developments have been the new catalysts for stereoselective metathesis and catalysts with considerable functional group tolerance These new catalysts in addition to Ring Opening Metathesis Polymerisation ROMP and Acyclic Diene Metathesis ADMET are now powerful tools for Ring Closing Metathesis RCM and have found many applications in the synthesis of natural products A lot of information has been established about all aspects of the olefin metathesis and there is a vast literature concerning the process covering the initiators mechanistic features and applications of this reaction in organic and polymer synthesis The NATO ASI on 4th ROMP and Related Chemistry took place in Polanica Zdroj Poland during 3 to 15 Sept 2000 to highlight

the developments in this area and to discuss the prospects and visions for the year 2000 and beyond The aims of the ASI were to provide a platform for dissemination of knowledge to promote communication between people who have a serious interest in this field of chemistry to help establishing international scientific contacts and to provide an opportunity for the scientists with an appropriate scientific background to learn of recent developments in this field of science There were 15 lecturers and 67 participants in this NATO ASI
