The top layer is a bright yellow, followed by a dark blue layer, then a lighter blue layer, and finally a dark blue layer at the bottom. ## **Risk And Misfortune A Social Construction Of Accidents:**

*Risk & Misfortune* Judith Green, 2013-11-05 First published in 1997 Routledge is an imprint of Taylor Francis an information company *Risk and Misfortune* Dr Judith Green, Taylor & Francis Group, 2020-12-18 There has been a growing sociological interest in both risk and its management and with how we cope with the uncertainties of late 20th century life Understanding accidents is the key to understanding the risk society for accidents are both the paradigmatic challenge for risk technologies to predict the apparently unpredictable and the ultimate indicator of the limits of those technologies The book traces the emergence of the accident as a marginal misfortune in modernist thought and its transformation into a preventable misfortune in the late 20th century It identifies accidents as being crucial to self-conscious rational modernity in the early 20th century accidents which just happen marked the limits of rational explanation and only the irrational denied their existence However as an examination of Contemporary Medical And Health Promotion Writing Shows The Accident should no longer happen The rise of risk assessment constructs the accident as an essentially preventable misfortune This book should be of interest to students and sociologists working in the areas of social theory risk health and illness and knowledge It should also be of interest to those concerned about cultural change in the late 20th century and the implications of risk assessment technologies

**Risk And Misfortune** Judith Green, 2020-03-09 There has been a growing sociological interest in both risk and its management and with how we cope with the uncertainties of late 20th century life Understanding accidents is the key to understanding the risk society for accidents are both the paradigmatic challenge for risk technologies to predict the apparently unpredictable and the ultimate

## **Constructing Risk and Safety in Technological Practice**

Boel Berner, Jane Summerton, 2003-08-29 Modern technological systems entail risks and uncertainties of hitherto unknown dimensions This book discusses the construction of risk and safety within a variety of empirical contexts where technologies and their risk are debated and handled by individuals groups or organizations With contributions from leading scholars from Europe and the USA it presents original theoretical discussions linked to detailed empirical case studies [Encyclopedia of Death and Dying](#) Glennys Howarth, Oliver Leaman, 2003-12-16 In recent years there has been a massive upsurge in academic professional and lay interest in mortality This is reflected in academic and professional literature in the popular media and in the proliferation of professional roles and training courses associated with aspects of death and dying Until now the majority of reference material on death and dying has been designed for particular disciplinary audiences and has addressed only specific academic or professional concerns There has been an urgent need for an authoritative but accessible reference work reflecting the multidisciplinary nature of the field This Encyclopedia answers that need The Encyclopedia of Death and Dying consolidates and contextualizes the disparate research that has been carried out to date The phenomena of death and dying and its related concepts are explored and explained in depth from the approaches of varied disciplines and related professions in the arts social sciences humanities medicine and the sciences In addition to scholars and students in the field

from anthropologists and sociologists to art and social historians the Encyclopedia will be of interest to other professionals and practitioners whose work brings them into contact with dying dead and bereaved people It will be welcomed as the definitive death and dying reference source and an essential tool for teaching research and independent study

**Accidents and Violent Death in Early Modern London, 1650-1750** Craig Spence, 2016 Between the mid seventeenth and mid eighteenth century more than 15 000 Londoners suffered sudden violent deaths While this figure includes around 3 000 who were murdered or committed suicide the vast majority of fatalities resulted from unexplained violent deaths or accidents In the early modern period accidental and disorderly deaths from drowning falls stabbing shooting fires explosions suffocation and animals and vehicles among others were a regular feature of urban life This book is a critical study of the early modern accident Drawing on the weekly London Bills of Mortality parish burial registers newspapers and other related documents it examines accidents and other forms of violent death in the city with a view to understanding who among its residents encountered such events how the bureaucracy recorded and elaborated their circumstances and why they did so and what practical responses might follow Additionally the book explores the way in which these events were transformed to become a recurring cultural trope in oral textual and visual narratives of metropolitan life and how sudden deaths were understood by early modern mentalities By the mid eighteenth century providential explanations were giving way to a more mechanically rational view that saw accident events as threats to be managed rather than misfortunes to be explained

**An Accidental History of Canada** Megan J. Davies, Geoffrey L. Hudson, 2024-07-15 Although Canadian history has no shortage of stories about disasters and accidents the phenomena of risk upset and misfortune have been largely overlooked by historians Disasters get their due but not so the smaller scale accident where fate is more intimate Yet such events often have a vivid afterlife in the communities where they happen and the way in which they are explained and remembered has significant social cultural and political meaning An Accidental History of Canada brings together original studies of an intriguing range of accidents stretching from the 1630s to the 1970s These include workplace domestic childhood and leisure accidents in colonial Indigenous rural and urban settings Whether arising from colonial power relations urban dangers perils in resource extraction or hazardous recreations most accidents occur within circumstances of vulnerability and reveal precarity and inequities not otherwise apparent Contributors to this volume are alert to the intersections of the settler agenda and the elevation of risk that it brings Indigenous and settler ways of understanding accidents are juxtaposed with chapters exploring the links between accidents and the rise of the modern state An Accidental History of Canada makes plain that whether they are interpreted as an intervention by providence a miscalculation an inevitability or the result of observable risk accidents and our responses to them reveal shared values

Growing Up with Risk Betsy Thom, Rosemary Sales, Jenny Pearce, 2007-05-16 This book provides a critical analysis of ways in which risk assessment and management are defined and applied in policy theory and practice in relation to children and young people It explores the complexities of balancing

responsibility for protecting the young with the benefits of risk taking and the need to allow experimentation      *Critical Disaster Studies* Jacob A.C. Remes,Andrew Deutsch Horowitz,Andy Horowitz,2021-08-20 Scholars from seven disciplines whose work spans five continents announce a new way of seeing disasters that is essential for making sense of our time critical disaster studies Critical Disaster Studies strips away the technocratic veneer that too often makes structural problems appear to be acute emergencies      **Medicine, the Market and the Mass Media** Virginia Berridge,Kelly Loughlin,2004-08-02 This collection opens up the post war history of public health to sustained research based historical scrutiny Medicine the Market and the Mass Media examines the development of a new view of the health of the public and the influences which shaped it in the post war years Taking a broad perspective the book examines developments in Western Europe and the relationships between Europe and the US The essays looks at the dual legacy of social medicine through health services and health promotion and analyse the role of mass media along with the connections between public health and industry This international collection will appeal to public health professionals students of the history of medicine and of health policy      **By Accident or Design** Paul Fyfe,2015-03-19 On the banks of the Thames it is a tremendous chapter of accidents As Henry James surveys London in 1888 he sums up what had fascinated urban observers for a century the random and even accidental development of this unprecedented form of human settlement the modern metropolis By Accident or Design Writing the Victorian Metropolis takes James at his word arguing that accident was both a powerful metaphor and material context through which the Victorians arrested the paradoxes of metropolitan modernity and reconfigured understandings of form and change Paul Fyfe shows how the material conditions of urban accidents offer new and compelling modes of analysis for intellectual and literary history Through extensive archival study and interdisciplinary analysis of urban industrial accidents risk management and civic improvements By Accident or Design reclaims the metropolis as ground zero for some of the most important thinking about causation in the nineteenth century It demonstrates the centrality of interdependent concepts of design and accident not only to metropolitan discourse but also to current critical discourse about the formal and circulatory dynamics of Victorian metropolitan writing Thus this book offers a new vocabulary for the dialectics of the modern city and the signature forms of writing about it including the newspaper the illustrated periodical the industrial novel and urban broadsheets      *Accident Prone* John Burnham,2010-04-15 Technology demands uniformity from human beings who encounter it People encountering technology however differ from one another Thinkers in the early twentieth century observing the awful consequences of interactions between humans and machines death by automobiles or dismemberment by factory machinery for example developed the idea of accident proneness the tendency of a particular person to have more accidents than most people In tracing this concept from its birth to its disappearance at the end of the twentieth century Accident Prone offers a unique history of technology focused not on innovations but on their unintended consequences Here John C Burnham shows that as the machine era progressed the physical and economic impact of

accidents coevolved with the rise of the insurance industry and trends in twentieth century psychology After World War I psychologists determined that some people are more accident prone than others This designation signaled a shift in social strategy toward minimizing accidents by diverting particular people away from dangerous environments By the 1960s and 1970s however the idea of accident proneness gradually declined and engineers developed new technologies to protect all people thereby introducing a hidden but radical egalitarianism Lying at the intersection of the history of technology the history of medicine and psychology and environmental history Accident Prone is an ambitious intellectual analysis of the birth growth and decline of an idea that will interest anyone who wishes to understand how Western societies have grappled with the human costs of modern life Identifying Emerging Issues in Disaster Risk Reduction, Migration, Climate Change and Sustainable Development Karen Sudmeier-Rieux,Manuela Fernández,Ivanna M. Penna,Michel Jaboyedoff,J.C.

Gaillard,2016-08-29 The goal of this book is to explore disaster risk reduction DRR migration climate change adaptation CCA and sustainable development linkages from a number of different geographical social and natural science angles Well known scientists and practitioners present different perspectives regarding these inter linkages from around the world with theoretical discussions as well as field observations This publication contributes in particular to the discussion on the Sendai Framework for Disaster Risk Reduction SFDRR 2015 2030 and the debate about how to improve DRR including CCA policies and practices taking into account migration processes from a large perspective where both natural and social factors are crucial and mutually alloyed Some authors see the SFDRR as a positive step forward in terms of embracing a multitude of issues others doubting that the agreement will lead to much concrete action toward real action on the ground This book is a timely contribution for researchers students and policy makers in the fields of environment human geography migration disaster and climate change studies who seek a more comprehensive grasp of contemporary development issues The

Jones-Imhotep, 2025-03-18 An examination of how technological failures defined nature and national identity in Cold War Canada Throughout the modern period nations defined themselves through the relationship between nature and machines Many cast themselves as a triumph of technology over the forces of climate geography and environment Some however crafted a powerful alternative identity they defined themselves not through the triumph of machines over nature but through technological failures and the distinctive natural orders that caused them In *The Unreliable Nation* Edward Jones Imhotep examines one instance in this larger history the Cold War era project to extend reliable radio communications to the remote and strategically sensitive Canadian North He argues that particularly at moments when countries viewed themselves as marginal or threatened the identity of the modern nation emerged as a scientifically articulated relationship between distinctive natural phenomena and the problematic behaviors of complex groups of machines Drawing on previously unpublished archival documents and recently declassified materials Jones Imhotep shows how Canadian defense scientists

elaborated a distinctive Northern natural order of violent ionospheric storms and auroral displays and linked it to a machinic order of severe and widespread radio disruptions throughout the country Tracking their efforts through scientific images experimental satellites clandestine maps and machine architectures he argues that these scientists naturalized Canada's technological vulnerabilities as part of a program to reimagine the postwar nation The real and potential failures of machines came to define Canada its hostile Northern nature its cultural anxieties and its geo political vulnerabilities during the early Cold War Jones Imhotep's study illustrates the surprising role of technological failures in shaping contemporary understandings of both nature and nation
