Share Capital:

Share Capital Accounting - English Navneet Singh, Share capital refers to the total amount of capital raised by a company through the issuance of shares to shareholders. It represents the ownership stake that shareholders have in the company. Share capital is one of the key components of a company's balance sheet and is categorized into different types of shares, each with its own rights and privileges. Here are some important points about share capital:

- Authorized Share Capital:** This is the maximum amount of share capital that a company is authorized to issue as specified in its articles of association or charter. It represents the upper limit of the company's capital raising capacity.
- Issued Share Capital:** Issued share capital is the portion of authorized share capital that the company has issued and sold to shareholders. It represents the total value of shares that are in the hands of investors.
- Subscribed Share Capital:** Subscribed share capital is the portion of issued share capital that shareholders have agreed to purchase or subscribe to. It may be equal to or less than the total issued share capital, depending on the extent to which shareholders have subscribed to the shares offered by the company.
- Paid up Share Capital:** Paid up share capital is the portion of subscribed share capital for which shareholders have already made payments to the company. It represents the actual funds received by the company in exchange for the shares issued.

Types of Shares: Share capital may consist of different types of shares, such as ordinary shares, preference shares, or redeemable shares, each with its own rights and characteristics. For example, ordinary shares typically confer voting rights and entitle shareholders to dividends, while preference shares may have priority rights to dividends or assets in the event of liquidation.

Increase or Decrease: Companies may increase their share capital through a process known as capitalization, which involves issuing additional shares to existing shareholders or selling new shares to outside investors. Conversely, share capital can be reduced through processes like share buybacks or capital reduction schemes, subject to legal and regulatory requirements.

Regulatory Compliance: Companies are required to comply with relevant laws and regulations governing the issuance and management of share capital. This includes disclosure requirements, approval procedures, and compliance with corporate governance standards. Overall, share capital plays a crucial role in determining the ownership structure, financing, and governance of a company, and it reflects the financial resources available to support its operations and growth.
