Sharing The Work Sparing The Planet Work Time Reduction Consumption And The Environment:

Sharing the Work, Sparing the Planet Anders Hayden, 1999 This text argues that work time reduction can contribute to reducing ecological stress by emphasising free time over material consumption The book explores the obstacles and key questions and describes the numerous practical attempts to begin translating the idea into reality **Post-Growth Work**

Irmi Seidl, Angelika Zahrt, 2021-09-08 This book argues that society must rethink the notion of formal employment and instead introduce and spread the notion of meaningful work so that societies can become independent of economic growth The excessive consumption of natural resources and the immense emissions resulting from our growth oriented economic system surpass the planetary boundaries Despite this society and the economy still strive for economic growth in order to generate jobs to finance the social security system and to assure tax income However these expectations are increasingly unrealistic not least because technological developments such as digitalisation and robotisation will change and limit formal employment opportunities as well Against this backdrop the book introduces the notion of meaningful activities that embrace various kinds of work paid and unpaid sequential or in parallel which are meaningful for the worker as well as society as a whole At the same time the authors argue in favour of reduced working time in formal employment Furthermore the book also describes the necessary transformations in companies and for consumers for social and tax systems for social services and agriculture Innovative and timely this book will be a key resource for professionals and scholars interested in sustainability economics work transformation and post growth studies Monthly Labor Review , 2001 Publishes in depth articles on labor subjects current labor statistics information about current labor contracts and book reviews *Capitalism and the Political Economy of Work Time* Christoph Hermann, 2014-10-17 John Maynard Keynes expected that around the year 2030 people would only work 15 hours a week In the mid 1960s Jean Fourastié still anticipated the introduction of the 30 hour week in the year 2000 when productivity would continue to grow at an established pace Productivity growth slowed down somewhat in the 1970s and 1980s but rebounded in the 1990s with the spread of new information and communication technologies The knowledge economy however did not bring about a jobless future or a world without work as some scholars had predicted With few exceptions work hours of full time employees have hardly fallen in the advanced capitalist countries in the last three decades while in a number of countries they have actually increased since the 1980s This book takes the persistence of long work hours as starting point to investigate the relationship between capitalism and work time It does so by discussing major theoretical schools and their explanations for the length and distribution of work hours as well as tracing major changes in production and reproduction systems and analyzing their consequences for work hours Furthermore this volume explores the struggle for shorter work hours starting from the introduction of the ten hour work day in the nineteenth century to the introduction of the 35 hour week in France and Germany at the end of the twentieth century However the book also shows how neoliberalism has eroded collective work time regulations and resulted in an increase and polarization

of work hours since the 1980s Finally the book argues that shorter work hours not only means more free time for workers but also reduces inequality and improves human and ecological sustainability

The Barcelona School of Ecological Economics and Political Ecology Sergio Villamayor-Tomas, Roldan Muradian, 2023-02-28 In this open access book ecological economics and political ecology traditions converge into a single academic school The book constitutes a common ground where multiple and critical voices are expressed covering a broad scope of urgent matters at the crossroad between society economy and the natural environment The manuscripts composing this compendium offer appealing material for both experienced and younger researchers interested in interdisciplinary exchanges in the field of the social environmental sciences It combines historical accounts with recent theoretical and empirical developments revolving around the interaction between three foundational notions of the Barcelona School social metabolism environmental justice and self reflective science

Rethinking Climate and Energy Policies Tilman Santarius, Hans Jakob Walnum, Carlo Aall, 2016-08-18 This book calls for rethinking current climate energy and sustainability policy making by presenting new insights into the rebound phenomenon i e the driving forces mechanisms and extent of rebound effects and potential means of mitigating them It pursues an innovative and novel approach to the political and scientific rebound discourse and hence supplements the current state of knowledge discussed in the field of energy economics and recent reports by the Intergovernmental Panel on Climate Change Building on central rebound publications from the past four decades this book is divided into three main sections Part I highlights new aspects of rebound economics by presenting insights into issues that have so far not been satisfactorily researched such as rebounds in countries of the Global South rebounds on the producer side and rebounds from sufficiency behaviour as opposed to rebounds from technical efficiency improvements In turn Part II goes beyond conventional economic rebound research exploring multidisciplinary perspectives on the phenomenon in particular from the fields of psychology and sociology Advancing such multidisciplinary perspectives delivers a more comprehensive understanding of rebound s driving forces mechanisms and policy options Part III puts rebounds into practice and presents several policy cases and sector specific approaches including the contexts of labour markets urban planning tourism information and communication technologies and transport Lastly the book embeds the issue into the larger debate on decoupling green growth and degrowth and identifies key lessons learned for sustainable development strategies and policies at large By employing such varied and in depth analyses the book makes an essential contribution to the discussion of the overall question Can resource energy use and greenhouse gas emissions be substantially reduced without hindering economic growth

Getting Past Capitalism begins with a critique of the impacts of capitalism on human society and the environment It looks in new ways at what capitalism is and at how it is reproduced That investigation opens the door to fresh ways of looking at how to challenge it Cynthia Kaufman looks at some fundamental questions about how capitalism comes to look like a system that is unbeatable and how people come to have desires that work to reinforce capitalism Kaufman uses this analysis to develop ideas about how to challenge capitalism She argues that rather than looking for the fulcrum point in a system that will make it able to be overthrown we should try to understand what kinds of practices open more spaces for stopping the reproduction

of capitalist processes and what kinds of structures need to be developed to make capitalism a less important part of our world. *Getting Past Capitalism* includes a critique of capitalism and presentation of alternatives to capitalism many of which already exist. It explores strategies for developing and strengthening those alternatives. **Leisure and Human Rights** A.J. Veal, 2025-09-01. This book argues for while critically engaging with the proposition that leisure is a human right. The structure of the book sets this proposition within historical and international legal human rights contexts particularly exploring the human rights legal conception of leisure as time and activities compared with other conceptualisations arising in the field of leisure studies. The implications for different socio economic age related gender and ethnic groups are also explored. The book will be of interest to leisure studies scholars unfamiliar with the detail of the concept of human rights and the human rights scholars unfamiliar with the concept of leisure as a human right in international law. **Consumerism, Sustainability, and Happiness** Cynthia Kaufman, 2023-04-28. What would it take to have a world where everyone had enough? How can we eliminate poverty leave enough for nonhuman nature and increase well being? This book explores ways the reader can live their life engage with cultural change and engage with policy making to build that world. We are presently on a path to environmental destruction as our societies are driven by forces which leave many people without what they need to meet their basic needs while also wasting vast resources on an unsatisfying consumer economy. The current system does not lead to a sense of wellbeing even among those who are relatively materially comfortable. This book focuses on solutions for building a world of enough. It explains how we can reorient our thinking and take the steps necessary to transform our social systems. It looks at ways to reduce the insatiable desire for status and consumption that drive our economies. It focuses on emerging approaches to economics that take well being as their goal and explores the policies that are crucial for getting there such as reducing inequality investing in public goods and reducing work time. The book arms the reader with a variety of tools for building a world where everyone has enough for a good life. *La Véritable richesse* Juliet Schor, 2013-03-22. Nous connaissons aujourd'hui l'enchaînement français qui fait que travail et consommation s'entraînent l'un l'autre pour continuer faire fonctionner une machine économique qui a perdu tout son sens. Pour réunir les conditions du changement face la puissance des logiques de statu quo il faut revoir radicalement notre façon de penser de travailler de consommer. Loin de tout message sacrificiel et en reprenant son compte l'idée de revivre américain fond sur la recherche du bonheur. Juliet Schor montre qu'un mode de vie qui privilégie l'apanouissement et la cohésion sociale plutôt que l'accumulation peut mener l'équilibre écologique et économique. Cela passe tout d'abord par la réduction du temps de travail au cœur de cet ouvrage et par une bonne utilisation du temps ainsi libérer agriculture urbaine bricolage changes sont autant d'exemples explorés ici. Juliet Schor défend aussi l'idée que les innovations sociales et les nouvelles technologies peuvent simultanément améliorer nos vies et protéger la planète. Elle nous convainc ainsi que nous pouvons remettre en cause l'idée de déterminisme notamment économique auquel nous devrions nous soumettre et nous donne les moyens de sortir du cycle qui mène du travail aux dépenses et d'aller vers un

monde riche de temps de cr ativit d information et de lien social Taking Stock of Industrial Ecology Roland Clift,Angela Druckman,2015-12-11 How can we design more sustainable industrial and urban systems that reduce environmental impacts while supporting a high quality of life for everyone What progress has been made towards reducing resource use and waste and what are the prospects for more resilient material efficient economies What are the environmental and social impacts of global supply chains and how can they be measured and improved Such questions are at the heart of the emerging discipline of industrial ecology covered in Taking Stock of Industrial Ecology Leading authors researchers and practitioners review how far industrial ecology has developed and current issues and concerns with illustrations of what the industrial ecology paradigm has achieved in public policy corporate strategy and industrial practice It provides an introduction for students coming to industrial ecology and for professionals who wish to understand what industrial ecology can offer a reference for researchers and practitioners and a source of case studies for teachers *Bioregionalism and Global Ethics* Richard Evanoff,2010-09-13 While a number of schools of environmental thought including social ecology ecofeminism ecological Marxism ecoanarchism and bioregionalism have attempted to link social issues to a concern for the environment environmental ethics as an academic discipline has tended to focus more narrowly on ethics related either to changes in personal values or behavior or to the various ways in which nature might be valued What is lacking is a framework in which individual social and environmental concerns can be looked at not in isolation from each other but rather in terms of their interrelationships In this book Evanoff aims to develop just such a philosophical framework one in which ethical questions related to interactions between self society and nature can be discussed across disciplines and from a variety of different perspectives The central problem his study investigates is the extent to which a dichotomized view of the relationship between nature and culture perpetuated in ongoing debates over anthropocentric vs ecocentric approaches to environmental ethics might be overcome through the adoption of a transactional perspective which offers a more dynamic and coevolutionary understanding of how humans interact with their natural environments Unlike anthropocentric approaches to environmental ethics which often privilege human concerns over ecological preservation and some ecocentric approaches which place more emphasis on preserving natural environments than on meeting human needs a transactional approach attempts to create more symbiotic and less conflictual modes of interaction between human cultures and natural environments which allow for the flourishing of both
