Conservation and Management Sarah L. Fowler,Tim M. Reed,Frances Dipper,2002 The Darwin Elasmobranch Biodiversity Conservation and Management project in Sabah held a three day international seminar that included a one day workshop in order to highlight freshwater and coastal elasmobranch conservation issues in the region and worldwide to disseminate the result of the project to other Malaysian states and countries and to raise awareness of the importance of considering aspects of elasmobranch biodiversity in the context of nature conservation commercial fisheries management and for subsistence fishing communities These proceedings contain numerous peer reviewed papers originally presented at the seminar which

cover a wide range of topics with particular reference to species from freshwater and estuarine habitats The workshop served to develop recommendations concerning the future prospects of elasmobranch fisheries biodiversity conservation and management This paper records those conclusions which highlight the importance of elasmobranchs as top marine predators and keystone species noting that permanent damage to shark and ray populations are likely to have serious and unexpected negative consequences for commercial and subsistence yields of other important fish stocks **Comprehensive**

The Evolutionary Strategies that Shape Ecosystems J. Philip Grime, Simon Pierce, 2012-03-26 THE EVOLUTIONARY STRATEGIES THAT SHAPE ECOSYSTEMS In 1837 a young Charles Darwin took his notebook wrote I think and then sketched a rudimentary stick like tree Each branch of Darwin s tree of life told a story of survival and adaptation adaptation of animals and plants not just to the environment but also to life with other living things However more than 150 years since Darwin published his singular idea of natural selection the science of ecology has yet to account for how contrasting evolutionary outcomes affect the ability of organisms to coexist in communities and to regulate ecosystem functioning In this book Philip Grime and Simon Pierce explain how evidence from across the world is revealing that beneath the wealth of apparently limitless and bewildering variation in detailed structure and functioning the essential biology of all organisms is subject to the same set of basic interacting constraints on life history and physiology The inescapable resulting predicament during the evolution of every species is that according to habitat each must adopt a predictable compromise with regard to how they use the resources at their disposal in order to survive The compromise involves the investment of resources in either the effort to acquire more resources the tolerance of factors that reduce metabolic performance or reproduction This three way trade off is the irreducible core of the universal adaptive strategy theory which Grime and Pierce use to investigate how two environmental filters selecting respectively for convergence and divergence in organism function determine the identity of organisms in communities and ultimately how different evolutionary strategies affect the functioning of ecosystems This book reflects an historic phase in which evolutionary processes are finally moving centre stage in the effort to unify ecological theory and animal plant and microbial ecology have begun to find a common theoretical framework Companion website This book has a companion website www.wiley.com/go/grime/evolutionarystrategies with Figures and Tables from the book for downloading **Global Perspectives on the Biology and Life History of the White Shark** Michael L.
