transformation focusing especially on industry and its transition Ligang Song Economic Record As the authors admit the wool industry may seem a rather obscure choice p 23 Yet this is a book of interest to a much wider relationship than agro business specialists It provides a meticulous case study of one industry which illuminates a number of broader issues currently under discussion in the China studies field As the Chinese economy becomes more variegated economists and political scientists trying to understand the Chinese economic reform experience will increasingly have to rely on such studies They bring out the intricacies of this process and help us to move from across the board generalizations on property rights reform to more nuanced analyses of economic transition Bj rn Alpermann The China Journal China defies generalizations and the only way that we can hope to obtain a clear idea of the process of reform is through detailed studies that trace the complex ebb and flow of reforms including the interactions between centre and locality and between the stages of the processing This is a valuable study that will stand the test of time Will Martin The World Bank US This book is more than yet another industry report This is a book on transition It describes the mega forces privatization state owned enterprise reform internationalization increasing competition and their mega consequences the proliferation of small private traders the diversification of the process sector the disintegration of government agencies and private initiatives that had been in charge of coordinating and managing quality that not only affected the wool sector but are literally re defining the fabric of China s economy For those interested in trying to better understand the fastest growing economy in the world this is a must read Neither the authors competence in wool technology nor their description of the institutional details of the wool economy gets in the way of their main message Powerful economic forces are at work in China In some cases there are positive benefits through competitive and improved incentives In other cases however there is a cost in terms of rising transaction costs imperfect information and the inability to rationalize the evolving supply chains Scott Rozelle University of California US China is the world s largest producer and consumer of wool textiles but the structure of its industry remains confusing and complex to many While China offers the most important growth opportunity in the world today the transition from a centrally planned to a market economy has compounded the difficulties and risks for many traders and investors wishing to deal with and in this market This publication makes a major contribution towards unravelling the complexity of Chinese industrial structures through its review of recent changes to one of China s oldest but still significant manufacturing sectors the wool textile industry The lessons learned through this study will be relevant to anyone wishing to understand China s industrial modernization processes Barry White Chief Executive Officer International Fibre Council IFC Ltd Director Australia China Business Council Exposed to powerful new economic forces and undergoing dramatic ownership reforms and technological changes China s industries are modernizing at a breakneck pace In many industries the outcomes have been chaotic and poorly aligned with societal objectives This book analyses the transformation and modernization of China s industries through a detailed investigation of the wool and wool textile industries The authors argue that to remai
