This study concentrates on determining of provenance of the jars and the subsequent tracing of exchange routes The fully integrated research design is an interdisciplinary collaborative archaeological project that embraces typological chemical petrographic and epigraphic approaches in order to shed light on the jars classification and origin The results of the chemical and petrographic work constitute primary parts of the study By establishing the origins and distribution of the jars these vases are placed within their historical context The identification of production centers and export routes is critical for a full understanding of the economic and political conditions in the Late Bronze Age Aegean and eastern Mediterranean
