Inca Rituals and Sacred Mountains Maria Constanza Ceruti,Johan Reinhard,2010-12-31 The Incas carried out some of the most dramatic ceremonies known to us from ancient times Groups of people walked hundreds of miles across arid and mountainous terrain to perform them on mountains over 6 096 m 20 000 feet high The most important offerings made during these pilgrimages involved human sacrifices capacochas Although Spanish chroniclers wrote about these offerings and the state sponsored processions of which they were a part their accounts were based on second hand sources and the only direct evidence we have of the capacocha sacrifices comes to us from archaeological excavations Some of the most thoroughly documented of these were undertaken on high mountain summits where the material evidence has been exceptionally well preserved In this study we describe the results of research undertaken on Mount Llullaillaco 6 739 m 22 109 feet which has the world s highest archaeological site The types of ruins and artifact assemblages recovered are described and analyzed By comparing the archaeological evidence with the chroniclers accounts and with findings from other mountaintop sites common patterns are demonstrated while at the same time previously little known elements contribute to our understanding of key aspects of Inca religion This study illustrates the importance of archaeological sites being placed within the broader context of physical and sacred features of the natural landscape **The Century Dictionary: The Century dictionary**

materials high performance sensors and structural materials under extreme environments However many barriers still exist in understanding and controlling the processing of nanoparticle based materials and nanostructured films In particular agglomeration must be controlled in powder synthesis and processing to enable the fabrication of homogeneous green or composite microstructures and microstructure evolution must be controlled to preserve the size and properties of the nanostructures in the finished materials Also novel nanostructure designs are highly needed at all stages of bulk and thin film nanomaterial formation process to enable unique performances low cost and green engineering This volume focuses on three general topics 1 Processing to preserve and improve nanoscale size structure and properties 2 Novel design and understanding of new nanomaterials such as new synthesis approaches templating and 3D assembly technologies and 3 Applications of nanoparticle assemblies and composites and thin films
