Davidson,2022-07-05 Ever since Louis Pasteur saved the French silk industry by identifying a disease affecting silkworms scientists have focused their attention on smaller and smaller organisms Once upon a time the rhinoceros beetle threatened the coconut plantations of Polynesia until scientists discovered the virus that would control it In more modern times the first experimental vaccine for HIV was produced using recombinant baculovirus introduced into insect eggs Meanwhile soybeans corn and cotton are protected from insects by genes from one insecticidal bacterium *Bacillus thuringiensis* and a related strain might hold clues for combating West Nile virus and malaria In this book Elizabeth Davidson shares amazing stories about diseases of insects and other invertebrates important to people and about the scientists who learned to use those diseases to control pests and create products beneficial to humans Focusing on insect microbial interactions crucial to public health she tells detective stories ranging across global history from the silkworm farms of nineteenth century Japan to the research labs of modern America In these fascinating accounts Davidson shows us how human health often comes down to a contest of bug against bug Even habitats seething with bacteria such as the runoff from cattle farms or sewage treatment plants are also teeming with
