Microcirculatory Effects Of Hemoglobin Solutions:

Microcirculatory Effects of Hemoglobin Solutions K. Messmer, K. E. Burhop, J. Hutter, 2004-04-16 Solutions of stroma free hemoglobin have been investigated for their potential as blood replacement fluids for more than 70 years Despite many attempts to overcome their unwanted side effects through chemical modification of the hemoglobin molecule none of the potential solutions has been approved for clinical use in Europe or the United States In recent years the vasoconstrictive activity of hemoglobin in the plasma was identified as the pivotal problem of hemoglobin based blood substitutes compromising nutritional perfusion and thus impeding oxygen unloading at the site of the microcirculation One of the prevailing assumptions is that the precapillary vasoconstriction and the ensuing tissue underperfusion is caused by the high affinity of free hemoglobin for nitric oxide To resolve this problem a number of recombinant techniques involving site directed mutagenesis as well as several chemical approaches involving polymerization and pegylation have been developed This volume summarizes the latest research on the effects of some of these new hemoglobin solutions on the microvasculature and tissue oxygenation It is recommended reading for all those interested in finding alternatives for donor blood in transfusion medicine including emergency specialists anesthesiologists surgeons trauma surgeons and other clinicians who are frequently confronted with blood loss and the need for blood replacement

Winslow,2012-12-06 Each chapter of this volume is a contribution from an expert in the field chosen by the editors to contribute to the 1997 Current Issues in Blood Substitute Research and Development course given in San Diego March 17 19 The contributors were selected because of their expertise in areas which the editors believe to be critical to the advancement of the field and which reflect activity in hot areas of relevant research While there is a continuity in style for the annual course each year brings changes in emphasis and content In previous years we were often not able to provide time for participants to present their views and opinions Consequently this year we encouraged discussion after each presentation These sessions were recorded transcribed and are printed with the chapters herein We believe that the product is very close to the capturing this year s course in print and trust readers will enjoy reading the always candid and often provocative remarks from the audience The price paid for inclusion of the discussion transcriptions was a delay in publication Each author was allowed to edit his her discussion section as well as the final version of the chapters prior to publication The changes are mainly for grammar and we tried when possible not to alter the conversational style of these interchanges Tissue Oxygenation in Acute Medicine William J. Sibbald,Konrad Messmer,Mitchell P. Fink,2002-01-21 Researchers from many disciplines with both basic and clinical perspectives came together in this volume to review and debate issues pertaining to the investigation and control of tissue oxygenation in acute medicine as well as treatments to improve tissue oxygenation when abnormal In this latter context special emphasis is placed on understanding the effect of blood substitutes on the circulation and on the potential roles of this family of compounds in clinical medicine Alternatives to Blood Transfusion in Transfusion Medicine Alice Maniatis,Jean-François Hardy,Phillipe van der Linden,2011-07-05 Meeting the needs of patients while minimizing blood transfusions requires special expertise precise monitoring and innovative techniques This cutting edge resource covers all the important clinical aspects of transfusion medicine in diverse clinical settings with a special emphasis on alternatives to transfusion Edited by a multidisciplinary team consisting of a transfusion specialist an anesthesiologist and an intensive care

Microcirculation in Fractal Branching Networks Tatsuhisa Takahashi, 2013-09-17 This book presents a new method for analyzing the structure and function of the biological branching systems of fractal trees with a focus on microcirculation. Branching systems in humans (vascular and bronchial trees) and those in the natural world (plants, trees, and rivers) are characterized by a fractal nature. To date, fractal studies have tended to concentrate on fractal dimensions which quantify the complexity of objects, but the applications for practical use have remained largely unexplored. This book breaks new ground with topics that include the human retinal microcirculatory network, oxygen consumption by vascular walls, the Fåhræus-Lindqvist effect, the bifurcation exponent, and the asymmetrical microvascular network. Readers are provided with simple formulas to express functions and a simulation graph with in vivo data. The book also discusses the mechanisms regulating blood flow and pressure and how they are related to pathological changes in the human body. Researchers and clinicians alike will find valuable new insights in these pioneering studies.

Intensive Care Medicine Jean-Louis Vincent, 2004-07-27

Includes 267 b/w illustrations and 73 tables. Compiles all of the information from the softcover series in Intensive Care Medicine. Introduction To Bioengineering Yuen-cheng Fung, Shu Chien, David A Gough, Marcos Intaglietta, Ghassan S Kassab, Bernard O Palsson, Robert L Sah, Geert W Schmid-schoenbein, Lanping Amy Sung, Pin Tong, Michael R T Yen, Wei Huang, 2001-05-04 Bioengineering is attracting many high quality students. This invaluable book has been written for beginning students of bioengineering and is aimed at instilling a sense of engineering in them. Engineering is invention and designing things that do not exist in nature for the benefit of humanity. Invention can be taught by making inventive thinking a conscious part of our daily life. This is the approach taken by the authors of this book. Each author discusses an ongoing project and gives a sample of a professional publication. Students are asked to work through a sequence of assignments and write a report. Almost everybody soon realizes that more scientific knowledge is needed and a strong motivation for the study of science is generated. The teaching of inventive thinking is a new trend in engineering education. Bioengineering is a good field with which to begin this revolution in engineering education because it is a youthful, developing interdisciplinary field.
