Particle Image Velocimetry Markus Raffel, Christian E. Willert, Steven T. Wereley, Jürgen Kompenhans, 2007-09-14 The development of Particle Image Velocimetry PIV a measurement technique which allows for

capturing velocity information of whole flows in fractions of a second has begun in the eighties of the last century. In 1998 when this book has been published, firstly the PIV technique emerged from laboratories to applications in fundamental and industrial research in parallel to the transition from photographic to video recording techniques. Thus this book whose objective was and is to serve as a practical guide to the PIV technique found strong interest within the increasing group of users. The early progress made with the PIV technique might best be characterized by the experience gained during our aerodynamic research at DLR Deutsches Zentrum für Luft und Raumfahrt at that time. The first applications of PIV outside the laboratory in wind tunnels as performed in the mid eighties were characterized by the following time scales: time required to set up the system and to obtain well focused photographic PIV recordings was 2 to 3 days; time required to process the film was 0.5 to 1 day; time required to evaluate a single photographic PIV recording by means of optical evaluation methods was 24 to 48 hours. When the first edition of this book was published in 1998 with electronic cameras and computers it was possible to focus on-line to capture several recordings per second and to evaluate a digital recording within seconds.
