Milestones In Mod Science Discovery Of Dna:

A Milestone in Frontiers in Pharmacology: 1,000 Published Papers in the Section Experimental Pharmacology and Drug Discovery Salvatore Salomone, 2020-04-14 Frontiers in Pharmacology was launched in 2010 with a number of sections which were eventually reorganized. The founding Field Chief Editor was Prof Thophile Godfraind, an eminent scientist active in cardiovascular pharmacology who pioneered the discovery of calcium antagonists. At that time he invited me to serve as Chief Editor for a section named Analytical and Experimental Pharmacology. Later on, our section enlarged and was re-named as Experimental Pharmacology and Drug Discovery to outline the translational potential of fundamental pharmacological research and theoretical analysis to the improvement of human health through the invention of novel medicinal products. We are now entering the 10th year of editorial activity which sees the publication of the 1 000th paper in our section. Such an achievement is very rewarding for us and our community but it is even more remarkable when placed into the timeline of our development. In fact, in a 10 year frame we have significantly grown in quantity and quality, e.g. both in number of published papers and in scientific impact. From a personal perspective by Salvatore Salomone, Specialty Chief Editor.

Milestones in Neurotoxicity and Neuroprotection: A Tribute to Professor Toshiharu Nagatsu M. Naoi, W. Maruyama, M.A. Collins, M. B. H. Youdim, S. Hasan Parvez, 2002-09-25 This book summarizes recent advances in understanding the mechanism underlying the selective cell death of dopamine neurons in Parkinson's disease. MPTP, endogenous neurotoxins, L-DOPA, and metal were proved to induce apoptosis and necrosis in neurons. The relationship of these causal factors to the pathogenesis of Parkinson's disease was discussed to give us overviews on the role of neurotoxins in this degenerative disorder. This title further presents the intracellular signal transduction and the related enzymes and other factors involved in dopaminergic neuronal death. Recent results on intracellular mechanism of neuroprotection are presented suggesting that neuroprotection as a causal therapy of neurodegenerative disorders may become practical in near future. This book shows new neuroprotective agents such as propargylamine derivatives and neurotrophins and the intracellular mechanism to prevent the activation of apoptotic cascade in neurons. The authors of this book are active researchers participating in these subjects and the readers will find the knowledge and techniques for the study on neurotoxicity and neuroprotection and the strategy for future research on these important subjects in clinical and basic neurology and neurosciences. The book is dedicated to Professor Toshiharu Nagatsu, a pioneer in the search for pathogenic factors in Parkinson's disease. The book is reprinted from the journal *Neurotoxicology and Teratology* Volume 24/5. *Remington* David B.
