Mind And Language Wolfson College Lectures 1974:

Mind and Language Samuel Guttenplan, 1977 Contemporary Philosophical Naturalism and Its Implications Bana Bashour, Hans D. Muller, 2013-10-15 One of the most pervasive and persistent questions in philosophy is the relationship between the natural sciences and traditional philosophical categories such as metaphysics epistemology and the mind *Contemporary Philosophical Naturalism and Its Implications* is a unique and valuable contribution to the literature on this issue It brings together a remarkable collection of highly regarded experts in the field along with some young theorists providing a fresh perspective This book is noteworthy for bringing together committed philosophical naturalists with one notable and provocative exception thus diverging from the growing trend towards anti naturalism The book consists of four sections the first deals with the metaphysical implications of naturalism in which two contributors present radically different perspectives The second attempts to reconcile reasons and forward looking goals with blind Darwinian natural selection The third tackles various problems in epistemology ranging from meaning to natural kinds to concept learning The final section includes three papers each addressing a specific feature of the human mind its uniqueness its representational capacity and its morality In this way the book explores the important implications of the post Darwinian scientific world view **Modern Physics and Ancient Faith** Stephen M. Barr, 2003-02-28 A considerable amount of public debate and media print has been devoted to the war between science and religion In his accessible and eminently readable new book Stephen M Barr demonstrates that what is really at war with religion is not science itself but a philosophy called scientific materialism *Modern Physics and Ancient Faith* argues that the great discoveries of modern physics are more compatible with the central teachings of Christianity and Judaism about God the cosmos and the human soul than with the atheistic viewpoint of scientific materialism Scientific materialism grew out of scientific discoveries made from the time of Copernicus up to the beginning of the twentieth century These discoveries led many thoughtful people to the conclusion that the universe has no cause or purpose that the human race is an accidental by product of blind material forces and that the ultimate reality is matter itself Barr contends that the revolutionary discoveries of the twentieth century run counter to this line of thought He uses five of these discoveries the Big Bang theory unified field theories anthropic coincidences G del s Theorem in mathematics and quantum theory to cast serious doubt on the materialist s view of the world and to give greater credence to Judeo Christian claims about God and the universe Written in clear language Barr s rigorous and fair text explains modern physics to general readers without oversimplification Using the insights of modern physics he reveals that modern scientific discoveries and religious faith are deeply consonant Anyone with an interest in science and religion will find *Modern Physics and Ancient Faith* invaluable **Husserl's Phenomenology of Intersubjectivity** Frode Kjosavik, Christian Beyer, Christel Fricke, 2018-12-07 This collection examines the instrumental role of intersubjectivity in Husserl s philosophy and explores the potential for developing novel ways of addressing and resolving contemporary philosophical issues on that basis This is the

first time Iso Kern offers an extensive overview of this rich field of inquiry for an English speaking audience Guided by his overview the remaining articles present new approaches to a range of topics and problems that go to the heart of its core theme of intersubjectivity and methodology Specific topics covered include intersubjectivity and empathy intersubjectivity in meaning and communication intersubjectivity pertaining to collective forms of intentionality and extended forms of embodiment intersubjectivity as constitutive of normality and finally the central role of intersubjectivity in the sciences The authors perspectives are strongly influenced by Husserl s own methodological concerns and problem awareness and are formed with a view to applicability in current debates be it within general epistemology analytic philosophy of language philosophy of mind meta ethics or philosophy of science With contributions written by leading Husserl scholars from across the Analytic and Continental traditions Husserl s Phenomenology of Intersubjectivity is a clear and accessible resource for scholars and advanced students interested in Husserl s phenomenology and the relevance of intersubjectivity to philosophy sociology and psychology

Peter Geach: Philosophical Encounters H.A. Lewis, 2013-03-09 The present volume owes its existence to a proposal of Dr Esa Saarinen Our aim was to celebrate the work of a living philosopher by presenting it both from his own point of view through the medium of a philosophical autobiography and from that of his closest philosophical colleagues and adversaries We felt that a philosophical career lived through vigorous controversy was best reflected not by adulation but in the spirit of that career by open debate Contributors were not constrained in their choice of topic but their contributions fell naturally into groups linked with some of Peter Geach s principal areas of interest and we have so grouped them in the book There is an interweaving of biographical and philosophical themes not only in Peter Geach s philosophical autobiography but also in the introductions he has contributed to each section Professor W V O Quine s contribution which consists of extracts from his correspondence with Peter Geach has been set apart as it forms a natural bridge between Peter Geach s autobiography and the contributions that follow Their correspondence reproduced here throws new light on many familiar themes from the writings of both philosophers among them the objects of belief and other attitudes issues in set theory the nature of causality and evolution in epistemology

I, Me, Mine Béatrice Longuenesse, 2017 Béatrice Longuenesse presents an original exploration of our understanding of ourselves and the way we talk about ourselves In the first part of the book she discusses contemporary analyses of our use of I in language and thought and compares them to Kant s account of self consciousness especially the type of self consciousness expressed in the proposition I think According to many contemporary philosophers necessarily any instance of our use of I is backed by our consciousness of our own body For Kant in contrast I think just expresses our consciousness of being engaged in bringing rational unity into the contents of our mental states In the second part of the book Longuenesse analyzes the details of Kant s view and argues that contemporary discussions in philosophy and psychology stand to benefit from Kant s insights into self consciousness and the unity of consciousness The third and final part of the book outlines similarities between Kant s view of the structure of mental

life grounding our uses of I in I think and in the moral I ought to on the one hand and Freud's analysis of the organizations of mental processes he calls ego and superego on the other hand Longuenesse argues that Freudian metapsychology offers a path to a naturalization of Kant's transcendental view of the mind. It offers a developmental account of the normative capacities that ground our uses of I which Kant thought could not be accounted for without appealing to a world of pure intelligences distinct from the empirical natural world of physical entities. **Epimethean Imaginings** Raymond

Tallis, 2014-09-11 These essays written in the spirit of Goethe's Epimetheus who traces the quick deed to the dim realm of form combining possibilities display the depth and breadth of Tallis's fascination with our lives. Whether discussing philosophical hardy perennials like time or a mundane artefact like ink Tallis challenges us to think differently about who we are and why we are. The first part of the book Analysis dives into the deep end to explore some of the big questions in philosophy perception knowledge and belief time the relationship between mathematics and reality and probability and causation. The middle section Tetchy Interludes takes a wry look at some aspects of contemporary art stupidity including the author's own and Christmas. The third part Celebration is more experimental in both its subject matter and treatment. It celebrates the complexity of ordinary everyday consciousness by contemplating the miracle of speech artefacts that have transformed our lives and what they reveal about our cognition such as the wheel the sail and ink and snapshots of the author's own consciousness on an ordinary day of past consciousness as captured in historical memory. Notwithstanding their diversity in theme and style these essays share the common aim of discovering and celebrating the submerged riches in the quick deeds of our everyday lives and perceptions. *Holism and the Understanding of Science* Louis Caruana, 2017-11-22

This title was first published in 2000. This book addresses issues which are central in the philosophy of science exploring a large and relevant literature. It should be of broad interest in the philosophy of science community. Professor Peter Lipton, Department of History and Philosophy of Science, University of Cambridge, UK. How can the complexities of understanding science be dealt with as a whole? Is philosophical realism still a defensible philosophical position? Exploring such fundamental questions this book claims that science ought to be understood in terms of universal practices and that such an understanding supports an attractive version of scientific realism. Holism is attracting renewed scholarly attention but is still loosely used in a range of different contexts from semantics to medicine. This book presents a detailed philosophical analysis of holism concentrating on two complementary aspects of holism cognitive and social to investigate its relevance to science studies. Bridging the gap between analytical historical and sociological accounts of science Caruana draws together results from recent research by Davidson Dummett Quine Wright and others on Wittgenstein's later philosophy. Demonstrating that holism both cognitive and social is not only essential for a full understanding of science but also compatible with a particular version of scientific realism this book presents important new perspectives for the philosophers of science and scholars of the history of science in particular. Louis Caruana is Assistant Lecturer in Philosophy of Science and Nature at the Gregorian

Reference, Truth and Conceptual Schemes G. Forrai, 2013-03-14 1

HISTORICAL BACKGROUND The purpose of the book is to develop internal realism the metaphysical epistemological doctrine initiated by Hilary Putnam Reason Truth and History Introduction Many Faces In doing so I shall rely sometimes quite heavily on the notion of conceptual scheme I shall use the notion in a somewhat idiosyncratic way which however has some affinities with the ways the notion has been used during its history So I shall start by sketching the history of the notion This will provide some background and it will also give opportunity to raise some of the most important problems I will have to solve in the later chapters The story starts with Kant Kant thought that the world as we know it the world of tables chairs and hippopotami is constituted in part by the human mind His central argument relied on an analysis of space and time and presupposed his famous doctrine that knowledge cannot extend beyond all possible experience It is a central property of experience he claimed that it is structured spatially and temporally However for various reasons space and time cannot be features of the world as it is independently of our experience So he concluded that they must be the forms of human sensibility i e necessary ingredients of the way things appear to our senses

Kant's Lasting Legacy Stefanie Grüne, Colin Marshall, 2025-06-30

Batrice Longuenesse is one of the most important scholars of German philosophy in the past 50 years This volume features original essays written by Longuenesse's long time interlocutors and former students that reflect on the breadth and influence of her work In Longuenesse's earlier work she shed light on the importance of subtle features of Kant's and Hegel's philosophical systems Her more recent work has built on doctrines concerning the self and self consciousness from Kant and other philosophers demonstrating the continued relevance of history of philosophy to contemporary philosophy The chapters are divided into two thematic sections that 1 read Kant and Hegel and 2 reflect on the state of Kantianism today The volume concludes with an autobiographical essay written by Longuenesse that reflects on her philosophical journey Many of the essays engage directly with Longuenesse's work while others are written on closely related themes in a similar spirit Altogether the chapters express the ongoing importance of Longuenesse's accomplishments and the vibrant state of the field Kant's Lasting Legacy will appeal to scholars and advanced students interested in Kant the history of German philosophy and philosophy of mind

Thinking about Oneself Kristina Musholt, 2015-07-31 A novel theory of self consciousness and its development that integrates philosophical considerations with recent findings in the empirical sciences In this book Kristina Musholt offers a novel theory of self consciousness understood as the ability to think about oneself Traditionally self consciousness has been central to many philosophical theories More recently it has become the focus of empirical investigation in psychology and neuroscience Musholt draws both on philosophical considerations and on insights from the empirical sciences to offer a new account of self consciousness the ability to think about ourselves that is at the core of what makes us human Examining theories of nonconceptual content developed in recent work in the philosophy of cognition Musholt proposes a model for the gradual transition from self related information implicit in the nonconceptual content of perception and other forms of experience to the explicit representation of the self in conceptual thought A crucial part of this model is an analysis of the relationship between self consciousness and intersubjectivity Self consciousness and awareness of others Musholt argues are two sides of the same coin After surveying the philosophical problem of self consciousness the notion of nonconceptual content and various proposals for the existence of nonconceptual self consciousness Musholt argues for a non self representationalist theory according to which the self is not part of the representational content of perception and bodily awareness but part of the mode of presentation She distinguishes between implicitly self related information and explicit self representation and describes the transitions from the former to the latter as arising from a complex process of

self other differentiation By this account both self consciousness and intersubjectivity develop in parallel

Enlightenment and Action from Descartes to Kant Michael Losonsky,2001-08-13 Kant believed that true enlightenment is the use of reason freely in public This book systematicaaly traces the philosophical origins and development of the idea that the improvement of human understanding requires public activity Michael Losonsky focuses on seventeenth century discussions of the problem of irresolution and the closely connected theme of the role of volition in human belief formation This involves a discussion of the work of Descartes Hobbes Locke Spinoza and Leibniz Challenging the traditional views of seventeenth century philosophy and written in a lucid non technical language this book will be eagerly sought out by historians of philosophy and students of the history of ideas

Philosophical Grounds of Rationality Richard E. Grandy,Richard Warner,1986 H P Grice is a distinguished philosopher predominantly known for his influential contributions to the philosophy of language but that is only one strand in a rich tapestry of ideas bearing on the philosophy of mind ethics and metaphysics as well Some of the essays in this collection of original papers by leading philosophers edited by Grandy and Warner develop Grice s earlier work in the philosophy of language but most of them discuss or present his newer and less known work Together they demonstrate the unified and powerful character of his thoughts on being mind meaning and morals An introductory essay provides some of the first overview of Grice s thought and makes explicit some of the relations among the essays Grice s substantial response is followed by nineteen contributed papers whose authors include Donald Davidson Stephen Schiffer John Searle and P F Strawson The Times Literary Supplement writes of Grice the only leader of whom it is true that the level of the discipline would be raised if most philosophers took him as a model of how to think and write This paperback edition replaces the hardback published March 1986

Locality and Logophoricity Isabelle Charnavel,2019 Locality and Logophoricity investigates what the distribution of pronominal expressions in various languages can tell us about the structure of the human language faculty The exploration of this question in the past fifty years has led to

the development of a general theory of referential dependency namely Binding Theory This book focuses on Condition A of this theory which concerns referentially dependent expressions such as English herself French elle m me or Mandarin ziji Specifically it tackles an issue of apparent ambiguity presented by many of these reflexives across languages in a large number of unrelated languages we observe that the same reflexive form must obey either syntactic constraints or discourse constraints related to perspective The specific aim of the book is to describe and explain this widespread dual behavior of reflexives A detailed empirical investigation based mainly on systematically collected French English Icelandic Mandarin and Korean data leads the author to propose a unified solution to this issue This proposal has consequences both for Binding Theory and for the theory of logophoricity which addresses the impact of perspective on linguistic systems
