Software and Mind Andrei Sorin,2013-01-01 Addressing general readers as well as software practitioners *Software and Mind* discusses the fallacies of the mechanistic ideology and the degradation of minds caused by these fallacies Mechanism holds that every aspect of the world can be represented as a simple hierarchical structure of entities But while useful in fields like mathematics and manufacturing this idea is generally worthless because most aspects of the world are too complex to be reduced to simple hierarchical structures Our software related affairs in particular cannot be represented in this fashion And yet all programming theories and development systems and all software applications attempt to reduce real world problems to neat hierarchical structures of data operations and features Using Karl Popper s famous principles of demarcation between science and pseudoscience the book shows that the mechanistic ideology has turned most of our software related activities into pseudoscientific pursuits Using mechanism as warrant the software elites are promoting invalid even fraudulent software notions They force us to depend on generic inferior systems instead of allowing us to develop software skills and to create our own systems Software mechanism emulates the methods of manufacturing and thereby restricts us to high levels of abstraction and simple isolated structures The benefits of software however can be attained only if we start with low level elements and learn to create complex interacting structures Software the book argues is a non mechanistic

phenomenon So it is akin to language not to physical objects Like language it permits us to mirror the world in our minds and to communicate with it Moreover we increasingly depend on software in everything we do in the same way that we depend on language Thus being restricted to mechanistic software is like thinking and communicating while being restricted to some ready made sentences supplied by an elite Ultimately by impoverishing software our elites are achieving what the totalitarian elite described by George Orwell in Nineteen Eighty Four achieves by impoverishing language they are degrading our minds

Nunez, 2010-04-07 Does the brain create the mind or is some external entity involved In addressing this hard problem of consciousness we face a central human challenge what do we really know and how do we know it Tentative answers in this book follow from a synthesis of profound ideas borrowed from philosophy religion politics economics neuroscience physics mathematics and cosmology the knowledge structures supporting our meager grasps of reality This search for new links in the web of human knowledge extends in many directions the shadows of our thought processes revealed by brain imagining brains treated as complex adaptive systems that reveal fractal like behavior in the brain s nested hierarchy resonant interactions facilitating functional connections in brain tissue probability and entropy as measures of human ignorance fundamental limits on human knowledge and the central role played by information in both brains and physical systems In Brain Mind and the Structure of Reality Paul Nunez discusses the possibility of deep connections between relativity quantum mechanics thermodynamics and consciousness all entities involved with fundamental information barriers Dr Nunez elaborates on possible new links in this nested web of human knowledge that may tell us something new about the nature and origins of consciousness In the end does the brain create the mind Or is the Mind already out there You decide Theory of Mind and Literature Paula Leverage, Howard Mancing, Richard Schweickert, 2010-01-15 Theory of Mind is what enables us to put ourselves in another s shoes It is mindreading empathy creative imagination of another s perspective in short it is simultaneously a highly sophisticated ability and a very basic necessity for human communication Theory of Mind is central to such commercial endeavors as market

research and product development but it is also just as important in maintaining human relations over a cup of coffee Not surprisingly it is a critical tool in reading and understanding literature which abounds with characters situations and other people s shoes Furthermore it is becoming increasingly apparent that reading literature also hones these critical mindreading skills Theory of Mind and Literature is a collection of nineteen essays by prominent scholars linguists cognitive scientists and philosophers working in the cutting edge field of cognitive literary studies which explores how we use Theory of Mind in reading and understanding literature

Seven Challenges for the Science of Animal Minds Mike Dacey, 2025-01-28 The scientific study of animal minds is difficult This book examines the most significant reasons this is so seven challenges for the science to overcome Researchers are aware of these challenges but few take any of them head on and none address them collectively Despite this focus on challenges the book s attitude is optimistic rather than critical these are challenges for the science not challenges to the science Researchers have made substantial progress as things are But taking the challenges head on can help build an even stronger more vibrant science The seven challenges are 1 underdetermination of theory by data 2 anthropomorphic bias 3 the difficulty of modeling cognitive processes 4 integrating across disciplines 5 ecological validity 6 small sample sizes and 7 measuring consciousness For each the book suggests rethinking the challenge and reorienting our attempts to address it These approaches are novel general ways of thinking that will help researchers work through the challenges and perhaps find solutions appropriate to their own research Each of the main chapters takes on one challenge Each also includes an empirical case study from social reasoning in chimpanzees to foraging in honeybees to consciousness in octopuses Along the way a big picture framework emerges for drawing conclusions about animal minds based on experimental evidence In this framework the role of any individual piece of the science is limited any individual experiment model claim or argument can only tell us so much When we are appropriately modest about each piece conclusions about animal minds must be arrived at by holistically considering all the evidence we can get This is a work in the philosophy of science but it is written to be accessible to any philosopher interested in empirical issues relating to the mind researchers in any of the related sciences including psychology neuroscience ethology and evolutionary biology as well as intermediate to advanced students
