Mindblindness An Essay On Autism And Theory Of Mind:

Mindblindness Simon Baron-Cohen,1997-01-22 In *Mindblindness* Simon Baron Cohen presents a model of the evolution and development of mindreading He argues that we mindread all the time effortlessly automatically and mostly unconsciously It is the natural way in which we interpret predict and participate in social behavior and communication We ascribe mental states to people states such as thoughts desires knowledge and intentions Building on many years of research Baron Cohen concludes that children with autism suffer from mindblindness as a result of a selective impairment in mindreading For these children the world is essentially devoid of mental things Baron Cohen develops a theory that draws on data from comparative psychology from developmental and from neuropsychology He argues that specific neurocognitive mechanisms have evolved that allow us to mindread to make sense of actions to interpret gazes as meaningful and to decode the language of the eyes A Bradford Book The MIT Encyclopedia of the Cognitive Sciences (MITECS) Robert A. Wilson, Frank C. Keil,2001-09-04 Since the 1970s the cognitive sciences have offered multidisciplinary ways of understanding the mind and cognition The MIT Encyclopedia of the Cognitive Sciences MITECS is a landmark comprehensive reference work that represents the methodological and theoretical diversity of this changing field At the core of the encyclopedia are 471 concise entries from Acquisition and Adaptationism to Wundt and X bar Theory Each article written by a leading researcher in the field provides an accessible introduction to an important concept in the cognitive sciences as well as references or further readings Six extended essays which collectively serve as a roadmap to the articles provide overviews of each of six major areas of cognitive science Philosophy Psychology Neurosciences Computational Intelligence Linguistics and Language and Culture Cognition and Evolution For both students and researchers MITECS will be an indispensable guide to the current state of the cognitive sciences *An Anatomy of Thought* Ian Glynn,1999 Drawing on a dazzlingly wide array of disciplines physiology neurology psychology anthropology linguistics and philosophy the renowned Cambridge scientist Ian Glynn presents a tour de force exploration of the workings of the human mind 48 line drawings Theory of Mind Martin Doherty,2008-08-26 A concise and readable review of the extensive research into children s understanding of what other people think and feel providing a comprehensive overview of 25 years of research into theory of mind **Theory of Mind and the Triad of Perspectives on Autism and Asperger Syndrome** Olga Bogdashina,2006 Inspired by the often uncomfortable interplay between autistic individuals parents and professionals in understanding autistic spectrum conditions Olga Bogdashina uses the concept of Theory of Mind ToM to consider these groups different and often conflicting perspectives ToM is the ability to imagine and make judgements about what others feel and think its absence in autistic individuals is called mindblindness This book addresses the mindblindness of people united in their interest in autism but divided by their different angles and perspectives Divided into four parts the book first defines autism then the views of the three main groups working with it autistic individuals parents and professionals under the headings of classifications

diagnosis causes development theories and treatment By comparing and reconciling the different perspectives in this way the book helps each group to understand and predict each other's responses and behaviours This enlightening and innovative book offers a unique way of stepping in each other's shoes and is a valuable resource for all people living or working with autism

Perspective Taking: building a neurocognitive framework for integrating the "social" and the "spatial" Klaus Kessler, Sarah H Creem-Regehr, Antonia Hamilton, 2015-06-08

Background Interacting with other people involves spatial awareness of one's own body and the other's body and viewpoint In the past social cognition has focused largely on belief reasoning which is abstracted away from spatial and bodily representations while there is a strong tradition of work on spatial and object representation which does not consider social interactions These two domains have flourished independently A small but growing body of research examines how awareness of space and body relates to the ability to interpret and interact with others This also builds on the growing awareness that many cognitive processes are embodied which could be of relevance for the integration of the social and spatial domains Online mental transformations of spatial representations have been shown to rely on simulated body movements and various aspects of social interaction have been related to the simulation of a conspecific's behaviour within the observer's bodily repertoire Both dimensions of embodied transformations or mappings seem to serve the purpose of establishing alignment between the observer and a target In spatial cognition research the target is spatially defined as a particular viewpoint or frame of reference FOR yet in social interaction research another viewpoint is occupied by another's mind which crucially requires perspective taking in the sense of considering what another person experiences from a different viewpoint Perspective taking has been studied in different ways within developmental psychology cognitive psychology psycholinguistics neuropsychology and cognitive neuroscience over the last few decades yet integrative approaches for channelling all information into a unified account of perspective taking and viewpoint transformations have not been presented so far

Aims This Research Topic aims to bring together the social and the spatial and to highlight findings and methods which can unify research across areas In particular the topic aims to advance our current theories and set the stage for future developments of the field by clarifying and linking theoretical concepts across disciplines

Scope The focus of this Research Topic is on the SPATIAL and the SOCIAL and we anticipate that all submissions will touch on both aspects and will explicitly attempt to bridge conceptual gaps Social questions could include questions of how people judge another person's viewpoint or spatial capacities or how they imagine themselves from different points of view Spatial questions could include consideration of different physical configurations of the body and the arrangement of different viewpoints including mental rotation of objects or viewpoints that have social relevance Questions could also relate to how individual differences in personality sex development culture species etc influence or determine social and spatial perspective judgements Many different methods can be used to explore perspective

taking including mental chronometry behavioural tasks EEG MEG and fMRI child development neuropsychological patients virtual reality and more Bringing together results and approaches from these different domains is a key aim of this Research Topic We welcome submissions of experimental papers reviews and theory papers which cover these topics

Giving Voice Meryl Alper, 2017-01-20 How communication technologies meant to empower people with speech disorders to give voice to the voiceless are still subject to disempowering structural inequalities Mobile technologies are often hailed as a way to give voice to the voiceless Behind the praise though are beliefs about technology as a gateway to opportunity and voice as a metaphor for agency and self representation In *Giving Voice* Meryl Alper explores these assumptions by looking closely at one such case the use of the Apple iPad and mobile app Proloquo2Go which converts icons and text into synthetic speech by children with disabilities including autism and cerebral palsy and their families She finds that despite claims to empowerment the hardware and software are still subject to disempowering structural inequalities Views of technology as a great equalizer she illustrates rarely account for all the ways that culture law policy and even technology itself can reinforce disparity particularly for those with disabilities Alper explores among other things alternative understandings of voice the surprising sociotechnical importance of the iPad case and convergences and divergences in the lives of parents across class She shows that working class and low income parents understand the app and other communication technologies differently from upper and middle class parents and that the institutional ecosystem reflects a bias toward those more privileged Handing someone a talking tablet computer does not in itself give that person a voice Alper finds that the ability to mobilize social economic and cultural capital shapes the extent to which individuals can not only speak but be heard

Humor and Laughter, Playfulness and Cheerfulness: Upsides and Downsides to a Life of Lightness Willibald Ruch, Tracey Platt, René T. Proyer, Hsueh-Chih Chen, 2019-08-12 The emergence of Positive Psychology has highlighted the importance of studying the good life and how to attain it Positive life outcomes such as well being thriving flourishing and happiness were discussed and investigated Among them different orientations to happiness were identified such as a life of pleasure life of meaning and life of engagement Other outcomes such as subjective and objective fulfillment in life or societal recognition have been less studied Among the characteristics that facilitate positive outcomes the VIA classification of strength and virtues distinguishes 24 strengths with humor playfulness being one of them Only a small segment of humor entered the definition of humor as character strengths namely the parts that contain some goodness Humor as a character strength facilitates a lot of positive outcomes such as positive emotions and positive relationships and there is a lightness accompanying humor playfulness The field is broader though and transcends the definition of humor as used in positive psychology in at least two ways First there is actually a family of overlapping but still distinct concepts with different research traditions We include next to humor and types of humor also laughter playfulness and cheerfulness We think that more research is needed on how they do overlap and what makes them distinct Second while positive psychology is interested in the goodness of we do want to stress that there is the need to study the non virtuous parts as well That is laughter may not only be expressing amusement but scorn directed at people humor may be benevolent but there is also sarcasm and playfulness may elicit positive emotions but also risk prone and immature types of behavior Therefore the aim of this Research Topic was to collect current perspectives on humor playfulness laughter and cheerfulness in both adults and children to study their full diversity but also interrelations and overlapping features to introduce new instruments or ways for their assessment in future studies and to study their causes and consequences in a variety of life domains We encouraged studies on differences due to gender or nationality the embodiment in different groups e g class clowns psychiatric patients or whether or not they can be trained We also welcomed contributions from adjacent disciplines e g education leisure studies or therapy counseling and different regions of the earth The outcome is a set of 33 manuscripts from altogether 101 authors Not all areas are covered and not all aims were met while we made progress there is much left to do In this sense the merging of these topics may be the first milestone but like every milestone it only marks the beginning of a long journey

Ethics and Neurodiversity Alexandra Perry, Anthony Yankowski, 2014-09-26 Increasingly voices in the growing neurodiversity movement are alleging that individuals who are neurologically divergent such as those with conditions related

to bipolar disorder autism schizophrenia and depression must struggle for their civil rights This movement therefore raises questions of interest to scholars in the humanities and social sciences as well as to concerned members of the general public These questions have to do with such matters as the accessibility of knowledge about mental health autonomy and community within the realm of the mentally ill and accommodation in civil society and its institutions The contributors to Ethics and Neurodiversity explore these questions and the traditional philosophical questions related to them The authors pay special attention to the need to examine the policies and practices of institutions such as higher education social support and healthcare

Cognition, Mindreading, and Shakespeare's Characters Nicholas R. Helms, 2019-01-16 Cognition Mindreading and Shakespeare's Characters brings cognitive science to Shakespeare applying contemporary theories of mindreading to Shakespeare's construction of character Building on the

work of the philosopher Alvin Goldman and cognitive literary critics such as Bruce McConachie and Lisa Zunshine Nicholas Helms uses the language of mindreading to analyze inference and imagination throughout Shakespeare's plays dwelling at length on misread minds in *King Lear* *Much Ado About Nothing* *Othello* and *Romeo and Juliet* Shakespeare manipulates the mechanics of misreading to cultivate an early modern audience of adept mindreaders an audience that continues to contemplate the moral ramifications of Shakespeare's characters even after leaving the playhouse Using this cognitive literary approach Helms reveals how misreading fuels Shakespeare's enduring popular appeal and investigates the ways in which Shakespeare's characters can both corroborate and challenge contemporary cognitive theories of the human mind

Tragic Cognition in Shakespeare's Othello Paul Cefalu, 2015-05-21 Paul Cefalu argues that Shakespearean characters raise timely questions about the relationship between cognition and consciousness and often defy our assumptions about normal cognition The book will appeal to scholars and students interested in both the virtues and limitations of cognitive literary criticism Schizophrenia Bulletin, 2005 **The Oxford Handbook of Philosophy and Psychiatry** K. W. M. Fulford, 2013-07-04 Philosophy has much to offer psychiatry not least regarding ethical issues but also issues regarding the mind identity values and volition The Oxford Handbook of Philosophy and Psychiatry offers the most comprehensive reference resource for this area every published one that is essential for both students and researchers in this field *The Innate Mind* Peter Carruthers, Stephen Laurence, Stephen Stich, 2005-07-14 This is the first volume of a projected three volume set on the subject of innateness The extent to which the mind is innate is one of the central questions in the human sciences with important implications for many surrounding debates By bringing together the top nativist scholars in philosophy psychology and allied disciplines these volumes provide a comprehensive assessment of nativist thought and a definitive reference point for future nativist inquiry The Innate Mind Structure and Content concerns the fundamental architecture of the mind addressing such question as What capacities processes representations biases and connections are innate How do these innate elements feed into a story about the development of our mature cognitive capacities and which of them are shared with other members of the animal kingdom The editors have provided an introduction giving some of the background to debates about innateness and introducing each of the subsequent essays as well as a consolidated bibliography that will be a valuable reference resource for all those interested in this area The volume will be of great importance to all researchers and students interested in the fundamental nature and powers of the human mind Together the three volumes in the series will provide the most intensive and richly cross disciplinary investigation of nativism ever undertaken They point the way toward a synthesis of nativist work that promises to provide a new understanding of our minds and their place in the natural order
