Water Resources in the Twenty-First Century Rosegrant, Mark W.,1997-03-01 In this paper Mark W Rosegrant assesses global water supply and demand describes in detail the forces contributing to water scarcity and lays out a number of strategies for managing water in the future Any solution Rosegrant asserts will need to involve both the careful exploitation of new sources of water and strong measures to stimulate more efficient use of water Policies must treat water not as a free good as they often do now but rather as a scarce commodity that comes at a price Cooperation between countries sharing the same water basin will also become increasingly important as water becomes more scarce

Politics and Development in a Transboundary Watershed Joakim Öjendal,Stina Hansson,Sofie Hellberg,2011-11-25 Water and its governance is becoming a global concern partly because it is turning into a goods in short supply with devastating effects on literally billions of people but also because it is the carrier of global warming whether through irregular weather patterns or through flooding water is how global warming will be felt The lion s share of the globally available fresh water resources is to be found in transboundary systems In spite of its significance the generated knowledge on how to deal with transboundary waters is weak and leaves policy makers with seemingly unavoidable trade off dilemmas and prioritizations often with detrimental effects In order to disentangle this predicament this volume works with one case the Lower Mekong Basin and

covers state of the art academic and practitioners knowledge and hence appeals to a wide audience The topic this volume addresses is situated in the nexus of an IR International Relations approach focussing on transboundary politics and its inclination to remain within the sphere of state sovereignty and national interest on the one hand and Development studies with its imperatives on participation planning and intervention on the other The dilemma we argue of better understanding transboundary water management lies in how to understand how these two rationalities can be simultaneously nurtured Audience This book will be relevant to scholars as it provides cutting edge research and students since it covers the primary debates in the field interested in resource management regional politics and development issues in the area It also addresses the global debate on transboundary water management and presents an in depth case of one of the globally most sophisticated attempts at pursuing sustainable river basin management Finally practitioners and policymakers would benefit greatly because all contributions have explicit policy relevance launching suggestion on improvements in water management

All the Water the Law Allows Christian S. Harrison,2021-08-12 As the population of the greater Las Vegas area grows and the climate warms the threat of a water shortage looms over southern Nevada But as Christian S Harrison demonstrates in *All the Water the Law Allows* the threat of shortage arises not from the local environment but from the American legal system specifically the Law of the River that governs water allocation from the Colorado River In this political and legal history of the Las Vegas water supply Harrison focuses on the creation and actions of the Southern Nevada Water Authority SNWA to tell a story with profound implications and important lessons for water politics and natural resource policy in the twenty first century In the state with the smallest allocation of the Colorado s water supply Las Vegas faces the twin challenges of aridity and federal law to obtain water for its ever expanding population *All the Water the Law Allows* describes how the impending threat of shortage in the 1980s compelled the five metropolitan water agencies of greater Las Vegas to unify into a single entity Harrison relates the circumstances of the SNWA s evolution and reveals how the unification of local county and state interests allowed the compact to address regional water policy with greater force and focus than any of its peers in the Colorado River Basin Most notably the SNWA has mapped conservation plans that have drastically reduced local water consumption and in the interstate realm it has been at the center of groundbreaking water sharing agreements Yet these achievements do not challenge the fundamental primacy of the Law of the River If current trends continue and the Basin States are compelled to reassess the river s distribution the SNWA will be a force and a model for the Basin as a whole

Conflict Prevention from Rhetoric to Reality David Carment,Albrecht Schnabel,2004-01-01 Offers a critical evaluation of existing and emerging approaches to applied conflict prevention that involve nontraditional actors ranging from the corporate sector and NGOs to regional and multilateral economic and political organizations The volume suggests best practices for individuals within these organizations to use the array of political economic social and developmental instruments available to them **Water** Brahma Chellaney,2013-07-25 This is a pioneering study about the relationship

between fresh water peace and security in Asia from the Middle East to Siberia but with a special focus on South and Southeast Asia. Asia is home to many of the world's great rivers and lakes but its huge population and booming economies make it the most water scarce continent on a per capita basis. Over extensive irrigation, pollution and global warming add to the demographic and economic pressures on Asia's fresh water supplies. The location of the sources for much of South and Southeast Asia's fresh water is in the Chinese controlled Tibetan Plateau and China's increasing exploitation of these water sources have created growing geopolitical tensions that could boil over into conflict. India is reliant on fresh water from Tibet which gives the Chinese uncomfortable leverage over India and further exacerbates their unsettled border disputes. Vietnam, Bangladesh, Pakistan and other countries of the region also find themselves in similarly vulnerable positions where water is scarce and the sources are increasingly being exploited and polluted upstream by the continent's most powerful country. Brahma Chellaney proposes strategies to avoid conflict and more equitably share and preserve Asia's water resources.

Sacred Rivers of India Marcus Blackwell, AI, 2025-02-12. *Sacred Rivers of India* explores the profound spiritual and cultural significance of India's most revered waterways, particularly the Ganga, Yamuna, and Saraswati rivers. These rivers are not merely geographical features but vital arteries of Indian civilization, deeply intertwined with religious practices, cultural traditions, and the core tenets of Hinduism. The book examines how these rivers embody deities and are central to Hindu cosmology, influencing daily life and shaping societal values. The book delves into the historical context of these rivers, tracing their mentions in ancient scriptures and examining their evolving roles through different historical periods. It also explores the cultural impact of these rivers on art, literature, music, and social customs. By bridging religious studies, history, and environmental science, *Sacred Rivers of India* offers a holistic understanding of the rivers' multifaceted significance. The book progresses from introducing the concept of sacred rivers in Hinduism to exploring the individual histories of the Ganga, Yamuna, and Saraswati, and culminates by addressing contemporary challenges and proposing sustainable solutions.

Parker,Yacov Tsur,2011-07-08 Centralized top down management of water resources through regulations has created unnecessary economic burdens upon users More flexible decentralized controls through the use of economic incentives have gained acceptance over the past decade The theme of this book is the increasing efforts throughout water scarce regions to rely upon economic incentives and decentralized mechanisms for efficient water management and allocation The book begins with a section of introductory chapters describing water systems institutions constraints and similarities in the following regions Israel and the Middle East Turkey California Florida and Australia Four of these regions face similar climates with wet winters and dry summers Florida has a more even seasonal distribution of rainfall yet it uses similar management strategies in controlling groundwater demand and water quality The book concludes with a section on water management case studies These case studies examine issues of conflict related to both water quality and water quantity While the case studies address both international and intranational concerns in specific regions of the world they portray broad principles that are applicable to many regions *Computational Automation for Water Security* Ashutosh Kumar Dubey,Arun Lal
