Germain,2008-05-27 Originally published in 1980 this seminal work was the first to introduce an ecological perspective into social work practice The third edition expands and deepens this perspective further developing the basic premise that by being situated within the people environment interface the social work profession is distinct from other service professions The book presents the what theories and concepts and the how practice methods to help people with their life stressors and simultaneously to influence communities organizations and policymakers to be more responsive to them In this edition Gitterman and Germain examine major changes to our socioeconomic and political landscape They restore a chapter on the history of social work practice offering a view of the limited services for African Americans provided by settlements and charity organization societies Building on the African American self help and mutual aid traditions this chapter traces the replication of a parallel social service system by African American leaders for their own communities The chapter also addresses the impact of contemporary societal trends including the global economy immigration cultural changes and the technology revolution In addition it discusses current professional contexts of managed mental health care evidence based practice and the professional uses of technology A new chapter explores issues and processes embedded in assessment practice monitoring and practice evaluation The volume continues to feature innovative schema for assessment and intervention with respect to stressful life transitions and traumatic events environmental pressures and dysfunctional interpersonal processes Practice illustrations offer reflections of today s major social issues such as AIDS homelessness and modern forms of violence Introduction to Adam Demos Gilad James, PhD, Business Standard Compliance and Requirements Validation Using Goal Models Novarun Deb,Nabendu Chaki,2020-02-26 This book discusses enterprise hierarchies which view a target system with varying degrees of abstraction These requirement refinement hierarchies can be represented by goal models It is important to verify that such hierarchies capture the same set of rationales and intentions and are in mutual agreement with the requirements of the system being designed The book also explores how hierarchies manifest themselves in the real world by undertaking a data mining exercise and observing the interactions within an enterprise The inherent sequence agnostic property of goal models prevents requirement analysts from performing compliance checks in this phase as compliance rules are generally embedded with temporal information The studies discussed here seek to extract finite state models corresponding to goal models with the help of model transformation The i ToNuSMV tool implements one such algorithm to perform model checking on i models In turn the AFSR framework provides a new goal model nomenclature that associates semantics with individual goals It also provides a reconciliation

machinery that detects entailment or consistency conflicts within goal models and suggests corrective measures to resolve such conflicts The authors also discuss how the goal maintenance problem can be mapped to the state space search problem and how A search can be used to identify an optimal goal model configuration that is free from all conflicts In conclusion the authors discuss how the proposed research frameworks can be extended and applied in new research directions The GRL2APK framework presents an initiative to develop mobile applications from goal models using reusable code component repositories

Focus On: 100 Most Popular South Korean Male Film Actors Wikipedia contributors, **The Future of Correctional Rehabilitation** Ronen Ziv, 2017-08-23 In the aftermath of Martinson's 1974 nothing works doctrine scholars have made a concerted effort to develop an evidence based corrections theory and practice to show what works to change offenders Perhaps the most important contribution to this effort was made by a group of Canadian psychologists most notably Donald Andrews James Bonta and Paul Gendreau who developed a treatment paradigm called the Risk Need Responsivity RNR model which became the dominant theory of correctional treatment This approach was more recently challenged by a perspective developed by Tony Ward Shadd Maruna and others called the Good Lives Model GLM Based in part on desistance research and positive psychology this model proposes to rehabilitate offenders by building on the strengths offenders possess GLM proponents see the RNR model as a deficit model that fixes dynamic risk factors rather than identifying what offenders value most and using these positive factors to pull them out of crime Through a detailed examination of both models theoretical and correctional frameworks *The Future of Correctional Rehabilitation Moving Beyond the RNR Model and Good Lives Model Debate* probes the extent to which the models offer incompatible or compatible approaches to offender treatment and suggests how to integrate the RNR and GLM approaches to build a new and hopefully more effective vision for offender treatment A foreword by renowned criminologist Francis T Cullen helps put the material into context This book will be of much interest to scholars and students studying correctional rehabilitation as well as practitioners working with offenders
