*Modeling Economic Management and Policy Issues of Water in Irrigated Agriculture* Ariel Dinar, John Letey, 1996-08-23  
This work presents models that characterize the relationships between quantity and quality of irrigation water application and agricultural production and the environment A comprehensive modeling approach addressing both the benefits of irrigation and the potential negative effects is introduced Physical biological concepts are combined with economic and engineering principles to demonstrate the usefulness of the model for analyzing various water management and policy issues Decision makers on all levels should find the modeling approach interesting and useful in the management issues from the farm to national levels

*Irrigation Water Pricing* François Molle, Jeremy Berkoff, 2007 This book contains 14 separately authored chapters on the pricing of irrigation water The chapters are entitled 1 Water pricing in irrigation the lifetime of an idea 2 Water pricing in irrigation mapping the debate in the light of experience 3 Why is agricultural water demand unresponsive at low price ranges 4 Get the prices right a model of water prices and irrigation efficiency in Maharashtra India 5 Thailand's free water rationale for a water charge and policy shifts 6 Water rights and water fees in rural Tanzania 7 Who will pay for water The Vietnamese State's dilemma of decentralization of water management in the Red River Delta 8 Water pricing in Haryana India 9 The energy irrigation nexus in South Asia groundwater conservation and power sector viability 10 Wells and canals in Jordan can pricing policies regulate irrigation water use 11 Water pricing in Tadla Morocco 12 Water pricing policies and recent reforms in China the conflict between conservation and other policy goals 13 Water pricing and irrigation a review of the European experience and 14 Policy driven determinants of irrigation development and environmental sustainability a case study in Spain

**Modeling Water Resources Management at the Basin Level**  
Ximing Cai, Claudia Ringler, Mark W. Rosegrant, 2006-01-01 This report develops an integrated economic hydrologic river basin model and applies it to the Maipo River Basin in central Chile Policy simulations based on the modeling framework can serve as a guide for water resource managers and policymakers in designing appropriate water policies and establishing reform priorities for water resource allocation Alternative analyses undertaken for the Maipo basin a mature water economy with limited resources and competition for water across all water using sectors offer new insights into the changing relationships between irrigation system and basin level water use efficiencies They also show how these changing relationships affect farm incomes and environmental impacts Simulations also provide new results on the role that the trading of water use rights can play in maintaining farm production levels enhancing farmer incomes and increasing water use efficiencies

**Modeling Water Resources Management at the Basin Level** Daene C. McKinney, International Water Management Institute, 1999 The world is facing severe and growing challenges in maintaining water quality and meeting the rapidly growing demand for water resources In addition water used for irrigation the largest use of water in most developing countries will likely have to be diverted increasingly to meet the needs of urban areas and industry whilst remaining a prime

engine of agricultural growth Finally environmental and other in stream water demands become more important as economies develop The river basin has been acknowledged to be the appropriate unit of analysis to address these challenges facing water resources management and modeling at this scale can provide essential information for policy makers in their decisions on allocation of resources This paper reviews the state of the art of modeling approaches to integrated water resources management at the river basin scale with particular focus on the potential of coupled economic hydrologic models and concludes with directions for future modeling exercises

**Water Resources Management IV** C.A. Brebbia, A. Kungolos, 2007-05-08 Water resources are under extreme pressure today all over the world The resulting problems have given rise to many activities which reflect the growing concern about them and the importance of effective management As water increasingly becomes a precious resource on which the well being of future generations depends it is essential to discuss issues concerning quality quantity planning and other related topics Containing papers presented at the Fourth International Conference on Water Resources Management this book examines the recent technological and scientific developments associated with the management of surface and sub surface water resources The wide variety of subjects covered are as follows Water Resource Management and Planning Waste Water Treatment and Management Water Markets and Policies Urban Water Management Water Quality Storm Water Management Water Security Systems Pollution Control Irrigation Problems Reservoirs and Lakes River Basin Management Hydrological Modelling Flood Risk Decision Support Systems Groundwater Flow Problems and Remediation Technologies Coastal and Estuarial Problems Soil and Water Conservation and Risk Analysis

**Handbook of Water Economics** Ariel Dinar, Kurt Schwabe, 2015-09-25 Water scarcity whether in the quality or quantity dimension afflicts most countries Decisions on water management and allocation over time space and among uses and users involve economic considerations This Handbook assembles research that represents recent thinking and applications in water economics The book chapters are written by leading scholars in the field who address issues related to its use management and value The topics cover analytical methods sectoral and intersectoral water issues and issues associated with different sources of water

*Pricing Irrigation Water* Yacov Tsur, 2010-09-30 As globalization links economies the value of a country's irrigation water becomes increasingly sensitive to competitive forces in world markets Water policy at the national and regional levels will need to accommodate these forces or water is likely to become undervalued The inefficient use of this resource will lessen a country's comparative advantage in world markets and slow its transition to higher incomes particularly in rural households While professionals widely agree on what constitutes sound water resource management they have not yet reached a consensus on the best ways of implementing policies Policymakers have considered pricing water a debated intervention in many variations Setting the price right some say may guide different types of users in efficient water use by sending a signal about the value of this resource Aside from efficiency itself an important policy objective equity accessibility and implementation costs associated with the right pricing must be considered

Focusing on the examples of China Mexico Morocco South Africa and Turkey Pricing Irrigation Water provides a clear methodology for studying farm level demand for irrigation water This book is the first to link the macroeconomics of policies affecting trade to the microeconomics of water demand for irrigation and in the case of Morocco to link these forces to the creation of a water user rights market This type of market reform the contributors argue will result in growing economic benefits to both rural and urban households [Water Charging in Irrigated Agriculture](#) Gez Cornish,Barry Bosworth,C. J. Perry,Jacob J. Burke,Food and Agriculture Organization of the United Nations,2004-01-01 This document presents an analysis of experience in irrigation water charging drawn from published literature and a series of six case studies These sources provide a broad spectrum of experience from less developed to more developed countries The aim has been to make an assessment of the claims concerning irrigation water charging as a tool for cost recovery achieving financial sustainability and demand management achieving resource sustainability [Integrated Water Resources Management](#) Miguel A. Mariño,Slobodan P. Simonović,2001 **Integrated Water-resources Management in a River-basin Context** ,2002 The main objective of the 5 day workshop was to present and discuss research being conducted by IWMI and IFPRI in selected river basins in the Asian region with financial support from the ADB through its regional technical assistance mechanism RETA The studies conducted by the two centers share some common goals and encompass work plans and methodologies that are highly complementary and mutually supportive

**Determining the Economic Value of Water** Robert A. Young,John B. Loomis,2014-07-23 Water provides benefits as a commodity for agriculture industry and households and as a public good such as fisheries habitat water quality and recreational use To aid in cost benefit analysis under conditions where market determined price signals are usually unavailable economists have developed a range of alternative valuation methods for measuring economic benefits This volume provides the most comprehensive exposition to date of the application of economic valuation methods to proposed water resources investments and policies It provides a conceptual framework for valuation of both commodity and public good uses of water addressing non market valuation techniques appropriate to measuring public benefits including water quality improvement recreation and fish habitat enhancement The book describes the various measurement methods illustrates how they are applied in practice and discusses their strengths limitations and appropriate roles In this second edition all chapters have been thoroughly updated and in particular the coverage of water markets and valuation of ecosystem services from water has been expanded Robert Young author of the 2005 edition has been joined for this new edition by John Loomis who brings additional expertise on ecosystem services and the environmental economics of water for recreational and other public good uses of water [Adaptation and Resilience](#) Bonnie G. Colby,George B. Frisvold,2012-06-25 In America s arid southwest climate change will occur in the context of already keen competition for water for agriculture urban growth electricity generation water based recreation and environmental protections This book

explores the challenges that climate change and variability pose for water and energy managers and users communities and policy makers in the arid Southwest and demonstrates the application of economic methods to address these challenges It provides valuable tools for both those interested in resource management and climate change and those seeking to understand how economic methods can be used to analyze contemporary social problems and craft appropriate responses The book considers both adaptation to long term climate change and more immediate issues of water and electricity management in the face of inter annual climate variability and drought Thus no matter what one s perspective on long run climate change projections the book provides useful lessons for some of the region s most pressing resource management problems

*17e Congres International Des Irrigations Et Du Drainage, Grenade, Espagne* International Commission on Irrigation and Drainage,1999      **Environmental Health Perspectives** ,1996      **Economics of Irrigation Water Management** Hasan Dudu,Sinqobile Chumi,2012 Water policy is an important topic on the agenda of the international community and efficiency and equity in the allocation of water have emerged as important factors to be considered Water pricing can be used to mitigate both the quantity and quality dimensions of water scarcity This paper reviews partial equilibrium models and general equilibrium models that are relevant to irrigation water management issues The most widely discussed issues in these models are water markets and water pricing The interrelationships between economic cultural social and political aspects that are related to water policy make it difficult to provide a comprehensive policy analysis General equilibrium models of irrigation water management allow incorporation of both the irrigation sector and the other sectors in the economy and analysis of policies affecting each of them and the interaction between them In addition to being able to address sector and household specifications production factors time horizon pricing policies and institutions such as water markets general equilibrium models allow the analysis of the impact of water policies on equity and poverty alleviation The authors conclude that although there has been a significant increase in efforts to analyze water related problems analytical and empirical research in the field is still deficient and more effort is needed to address them

**Economy-Wide Modeling of Water at Regional and Global Scales** Glyn Wittwer,2019-02-07 This book deals with the economic modelling of water at the global national and sub national levels It presents a multi faceted analysis and while it outlines the theories behind various models its main purpose is to analyse policy issues and present insights arising from modelling including a chapter analysing the macroeconomic implications of climate change Arguably the most compelling

reason for publishing a book on the economic modelling of water arises from the fact that agriculture accounts for approximately 70% of water used for economic purposes while only contributing 4% of global income. Given that water is an essential commodity, this discrepancy may in part be symptomatic of an undervaluation of water due to immature and incomplete markets. In turn, this undervaluation has led to an ongoing misallocation of water. When economic models include water accounts that feed into production functions, they model impacts on the marginal product of water. Policies that improve the link between the marginal product and price of water will improve water allocation, while advanced economic models such as those presented here can enhance our ability to explore the possible impacts of improved policy.
