

MODELING RATIONALITY, MORALITY, AND EVOLUTION

PETER A. DANIELSON

Modeling Rationality Morality And Evolution

R. Tuomela

Modeling Rationality Morality And Evolution:

Modeling Rationality, Morality, and Evolution Peter Danielson, 1998 These essays focus on questions that arise when morality is considered from the perspective of rational choice and evolution It links questions like is it rational to be moral to the evolution of co operation and uses models from game theory evolutionary biology and cognitive science **Modeling**

Rationality, Morality, and Evolution Peter Danielson, 2023 **Moral Puzzles and Legal Perplexities** Heidi M. Hurd, 2019 Engages with the life and work of Larry Alexander to explore puzzles and paradoxes in legal and moral theory

Liberty, Games and Contracts Malcolm Murray, 2016-05-06 Jan Narveson is one of the most significant contemporary defenders of the libertarian political position Unlike other libertarians who typically defend their view with reference to natural rights or an appeal to utilitarianism Narveson s main contribution has been to offer a philosophical defence of libertarianism based on a Hobbesian individualist contractarian ethic Critiques of Narveson s contractarian libertarianism fall into three categories those that reject contractarian moral theory those that reject any link between contractarianism and libertarianism and those that accuse libertarians of conflating liberty with property In this book Malcolm Murray brings together the most significant of Narveson s critics and presents their work alongside replies by Jan Narveson **Agents**

and Goals in Evolution Samir Okasha, 2018-06-12 Samir Okasha approaches evolutionary biology from a philosophical perspective in *Agents and Goals in Evolution* analysing a mode of thinking in biology called agential thinking He considers how the paradigm case involves treating an evolved organism as if it were an agent pursuing a goal such as survival or reproduction and seeing its phenotypic traits as strategies for achieving that goal or furthering its biological interests As agential thinking deliberately transposes a set of concepts goals interests strategies from rational human agents and to the biological world more generally Okasha s enquiry firstly looks at the justification for this is it mere anthropomorphism or does it play a genuine intellectual role in the science From this central question key points are considered such as how do we identify the goal that evolved organisms will behave as if they are trying to achieve Can agential thinking ever be applied to groups rather than to individual organisms And how does agential thinking relate to the controversies over fitness maximization in evolutionary biology In addition Okasha examines the relation between the adaptive and the rational by considering whether organisms can validly be treated as agent like Should we expect their evolved behaviour to correspond with that of rational agents as codified in the theory of rational choice If so does this mean that the fitness maximizing paradigm of the evolutionary biologist can be mapped directly to the utility maximizing paradigm of the rational choice theorist All of these important questions are engagingly raised and discussed at length **Cooperation R.**

Tuomela, 2013-06-29 In *Cooperation A Philosophical Study* Tuomela offers the first comprehensive philosophical theory of cooperation He builds on such notions a collective and joint goals mutual beliefs collective commitments acting together and acting collectively The book analyzes the varieties of cooperation making use of the crucial distinction between group mode

and individual mode cooperation The former is based on collective goals and collective commitments the latter on private goals and commitments The book discusses the attitudes and the kinds of practical reasoning that cooperation requires and investigate some of the conditions under which cooperation is likely rationally to occur It also shows some of the drawbacks of the standard game theoretical treatments of cooperation and presents a survey of cooperation research in neighbouring fields Readership Essential reading for researchers and graduate students in philosophy Also of interest to researchers in the social sciences and AI

The Oxford Handbook of Rationality Alfred R. Mele, Piers Rawling, 2004-01-08 Rationality has long been a central topic in philosophy crossing standard divisions and categories It continues to attract much attention in published research and teaching by philosophers as well as scholars in other disciplines including economics psychology and law The Oxford Handbook of Rationality is an indispensable reference to the current state of play in this vital and interdisciplinary area of study Twenty two newly commissioned chapters by a roster of distinguished philosophers provide an overview of the prominent views on rationality with each author also developing a unique and distinctive argument

From Evolutionary Biology to Economics and Back Jean-Baptiste André, Mikael Cozic, Silvia De Monte, Jean Gayon, Philippe Huneman, Johannes Martens, Bernard Walliser, 2023-01-12 This book offers a comprehensive exploration of the major key concepts common to economics and evolutionary biology Written by a group of philosophers of science biologists and economists it proposes analyses of the meaning of twenty five concepts from the viewpoint respectively of economics and of evolutionary biology each followed by a short synthesis emphasizing major discrepancies and commonalities This analysis is surrounded by chapters exploring the nature of the analogy that connects evolution and economics and chapters that summarize the major teachings of the analyses of the keywords Most scholars in biology and in economics know that their science has something in common with the other one for instance the notions of competition and resources Textbooks regularly acknowledge that the two fields share some history Darwin borrowing from Malthus the insistence on scarcity of resources and then behavioral ecologists adapting and transforming game theory into evolutionary game theory in the 1980s while Friedman famously alluded to a Darwinian process yielding the extant firms However the real extent of the similarities the reasons why they are so close and the limits and even the nature of the analogy connecting economics and biological evolution remain inexplicit This book proposes basis analyses that can sustain such explication It is intended for researchers grad students and master students in evolutionary and in economics as well as in philosophy of science

Moral Psychology Today David K. Chan, 2008-02-03 Moral Psychology Today David K Chan Philosophers working in the field of moral psychology concern themselves with issues and questions that straddle across more than one sub discipline in philosophy The answers that they propose and the theories that they propound have implications for moral philosophy the philosophy of mind epistemology and metaphysics Philosophers with an interest in the will or the motivational psychology of human action divide between those investigating psychological and behavioral concepts for their own sake and those working on action theory

for the sake of answering larger questions especially ethical ones The essays in this volume all of which were presented at a conference on Values Rational Choice and the Will belong largely in the latter category of research The essays here contribute to debates and discussions on a wide range of topics that are of current interest in moral psychology These essays demonstrate both the breadth of the field of moral psychology and the importance of the questions investigated Artificial boundaries between sub disciplines of philosophy are crossed in putting these essays together in the same anthology There are essays here in meta ethics and in normative ethics There are essays in ethical theory and in applied ethics There are essays that draw on discoveries in empirical psychology

The Assault on International Law Jens David Ohlin, 2014-12-22
International law presents a conceptual riddle Why comply with it when there is no world government to enforce it The United States has a long history of skepticism towards international law but 9 11 ushered in a particularly virulent phase of American exceptionalism as the US drifted away from international institutions and conventions Although American politicians and their legal advisors are often the public face of this attack the root of this movement is a coordinated and deliberate attack by law professors hostile to its philosophical foundations including Eric Posner Jack Goldsmith Adrian Vermeule and John Yoo In a series of influential writings they have claimed that since states are motivated primarily by self interest compliance with international law is nothing more than high minded talk These abstract arguments provide a foundation for dangerous legal conclusions that international law is largely irrelevant to determining how and when terrorists can be captured or killed that the US President alone should be directing the War on Terror without significant input from Congress or the judiciary that US courts should not hear lawsuits alleging violations of international law and that the US should block any international criminal court with jurisdiction over Americans These polemical accounts have ultimately triggered America's pernicious withdrawal from international cooperation In *The Assault on International Law* Jens David Ohlin exposes the mistaken assumptions of these New Realists in particular their impoverished utilization of rational choice theory In contrast he provides an alternate vision of international law based on an innovative theory of human rationality According to Ohlin rationality requires that agents follow through on their plans and commitments even when faced with opportunities for defection as long as the original plan was beneficial for the agent Seen in the light of this planning theory of rational agency international law is the product of nation states cooperating to escape a brutish State of Nature a result that is not only legally binding but also in each state's self interest

Rationality and Decision Making, 2018-02-08
Rationality and Decision Making From Normative Rules to Heuristics offers a broad overview of both classic and very recent discussions concerning rationality and strategies of individual and group decision making They are considered from a methodological ethical sociological historical cultural as well as an evolutionary perspective Decision making both rational and irrational is treated in its complexity as an algorithmic heuristic and intuitive process The volume analyzes the theoretical and practical aspects of decision making in individual intentional endeavors and group or institutionalized

undertakings The analyses are mostly theoretical but they also appeal to empirical studies proposed by philosophers and cognitive scientists who have studied logical cognitive biological social and evolutionary aspects of human rationality Contributors include Mar a Jos Fr polli Marek Hetma ski Jan F Jacko Artur Koterski Agnieszka Lekka Kowalik Sofia Miguens ngeles J Perona Manueal de Pinedo Jo o Alberto Pinto Krzysztof Polit Marcin Rz deczka Rui Sampaio da Silva Joanna Soko owska Barbara Trybulec Marcin Trybulec Neftal Villanueva Monika Walczak Jan Winkowski Anna W jtowicz Jes s Zamora Bonilla and Ant nio Zilh o

Structure, Evidence, and Heuristic Armin W. Schulz, 2020-04-22 This book is the first systematic treatment of the philosophy of science underlying evolutionary economics It does not advocate an evolutionary approach towards economics but rather assesses the epistemic value of appealing to evolutionary biology in economics more generally The author divides work in evolutionary economics into three distinct albeit related forms a structural form an evidential form and a heuristic form He then analyzes five examples of work in evolutionary economics falling under these three forms For the structural form he examines the parallelism between natural selection and economic decision making and the parallelism between natural selection and market competition For the evidential form he looks at the relationship between animal and human economic decision making and the evolutionary explanation of diversity in human economic decision making Finally for the heuristic form he focuses on the plausibility of equilibrium modeling in evolutionary ecology and economics In this way he shows that linking evolutionary biology and economics can make for a powerful methodological tool that can enable progress in our understanding of various economics questions Structure Evidence and Heuristic will be of interest to scholars and advanced students working in philosophy of science philosophy of social science evolutionary biology and economics

Intelligent Information Technologies: Concepts, Methodologies, Tools, and Applications Sugumaran, Vijayan, 2007-11-30 This set compiles more than 240 chapters from the world s leading experts to provide a foundational body of research to drive further evolution and innovation of these next generation technologies and their applications of which scientific technological and commercial communities have only begun to scratch the surface

Decision Theory and Rationality José Luis Bermúdez, 2009-02-19 The concept of rationality is a common thread through the human and social sciences from political science to philosophy from economics to sociology and from management science to decision analysis But what counts as rational action and rational behavior Jos Luis Berm dez explores decision theory as a theory of rationality Decision theory is the mathematical theory of choice and for many social scientists it makes the concept of rationality mathematically tractable and scientifically legitimate Yet rationality is a concept with several dimensions and the theory of rationality has different roles to play It plays an action guiding role prescribing what counts as a rational solution of a given decision problem It plays a normative role giving us the tools to pass judgment not just on how a decision problem was solved but also on how it was set up in the first place And it plays a predictive explanatory role telling us how rational agents will behave or why they did what they did This controversial but accessible

book shows that decision theory cannot play all of these roles simultaneously And yet it argues no theory of rationality can play one role without playing the other two The conclusion is that there is no hope of taking decision theory as a theory of rationality

The Philosophy of Evolutionary Theory Elliott Sober,2024-02-08 Natural selection mutation and adaptation are well known and central topics in Darwin s theory of evolution and in the 20th and 21st century theories which grew out of it but many other important topics are used in evolutionary biology that raise interesting philosophical questions In this book Elliott Sober analyses a much larger range of topics including fitness altruism common ancestry chance taxonomy phylogenetic inference operationalism reductionism conventionalism null hypotheses and default reasoning instrumentalism versus realism hypothetico deductivism essentialism falsifiability the principle of parsimony the principle of the common cause causality determinism versus indeterminism sensitivity to initial conditions and the knowability of the past Sober s clear philosophical analyses of these key concepts arguments and methods of inference will be valuable for all readers who want to understand evolutionary biology in both its Darwinian and its contemporary forms

Evolution of the Social Contract Brian Skyrms,2014-10-30 This new edition further develops the application of evolutionary game theory to an analysis of the origins of social contracts

Self-Control, Decision Theory, and Rationality José Luis Bermúdez,2018-12-06 Thinking about self control takes us to the heart of practical decision making human agency motivation and rational choice Psychologists philosophers and decision theorists have all brought valuable insights and perspectives on how to model self control on different mechanisms for achieving and strengthening self control and on how self control fits into the overall cognitive and affective economy Yet these different literatures have remained relatively insulated from each other Self Control Decision Theory and Rationality brings them into dialog by focusing on the theme of rationality It contains eleven newly written essays by a distinguished group of philosophers psychologists and decision theorists together with a substantial introduction collectively offering state of the art perspectives on the rationality of self control and the different mechanisms for achieving it

Risk and EU law Hans-W. Micklitz,Takis Tridimas,2015-09-25 Risk and EU Law considers the multiple reasons for the increase in the types and diversity of risks as well as the potential magnitude of their undesirable effects The book identifies such reasons as the openness of liberal societies market competition the constant endeavour to innovate as well as globalization and the impact of new technologies It also explores topics surrounding the social epistemology of risk observation and management the role of science in political and judicial decision making and transnational risk regulation and contractual governance
