Modeling Sensorineural Hearing Loss:

Modeling Sensorineural Hearing Loss Walt Jesteadt, 1997 A recent study indicates that 20 million people in the United States have significant sensorineural hearing loss Approximately 95% of those people have partial losses with varying degrees of residual hearing These percentages are similar in other developed countries What changes in the function of the cochlea or inner ear cause such losses What does the world sound like to the 19 million people with residual hearing How should we transform sounds to correct for the hearing loss and maximize restoration of normal hearing Answers to such questions require detailed models of the way that sounds are processed by the nervous system both for listeners with normal hearing and for those with sensorineural hearing loss This book contains chapters describing the work of 25 different research groups A great deal of research in recent years has been aimed at obtaining a better physiological description of the altered processes that cause sensorineural hearing loss and a better understanding of transformations that occur in the perception of those sounds that are sufficiently intense that they can still be heard Efforts to understand these changes in function have lead to a better understanding of normal function as well This research has been based on rigorous mathematical models computer simulations of mechanical and physiological processes and signal processing simulations of the altered perceptual experience of listeners with sensorineural hearing loss This book provides examples of all these approaches to modeling sensorineural hearing loss and a summary of the latest research in the field **Modeling**

Research presents a series of comprehensive and synthetic reviews of the fundamental topics in modern auditory research. The volumes are aimed at all individuals with interests in hearing research including advanced graduate students, postdoctoral researchers and clinical investigators. The volumes are intended to introduce new investigators to important aspects of hearing science and to help established investigators to better understand the fundamental theories and data in fields of hearing that they may not normally follow closely. Each volume presents a particular topic comprehensively and each serves as a synthetic overview and guide to the literature. As such the chapters present neither exhaustive data reviews nor original research that has not yet appeared in peer-reviewed journals. The volumes focus on topics that have developed a solid data and conceptual foundation rather than on those for which a literature is only beginning to develop. New research areas will be covered on a timely basis in the series as they begin to mature.

Psychophysics, Physiology and Models of Hearing Torsten Dau, Volker Hohmann, Birger Kollmeier, 1999. Recent advances in auditory neuroscience are characterized by a close interaction between neurophysiological findings, psychophysical effects and integrative models that attempt to bridge the gap between neuroscience and psychophysics. This volume introduces the latest developments in this quickly evolving interdisciplinary area. Tutorials by leading international scientists as well as more focused contributions by active researchers providing an invaluable summary of our current knowledge of psychophysics and auditory physiology and the main lines of research in this field. The book will be of interest to anyone involved in hearing research including neuroscientists, behavioral scientists, acousticians and biophysicists.

Hormones and Neural Aging: Lessons From Experimental Models Isabel Varela-Nieto, Julie A. Chowen, Luis Miguel García-Segura, 2019-01-23. How can we slow the signs of aging? Although aging is a natural process for all living things, doing so without dramatic alterations of health and well-being is an important aim in health care. Understanding this gradual but continuous process is fundamental in order to avoid or at least improve aging-associated illnesses and conditions. The reviews and studies compiled here address various aspects of the relationship between systemic and central changes during the aging process with hormonal signals as the important liaison.

Auditory Physiology and Perception Y. Cazals, K. Horner, L. Demany, 2013-10-22. Auditory Physiology and Perception documents the proceedings of the 9th International Symposium on Hearing held in Carenes, France, 9-14 June 1991. The aim of the symposium was to promote exchanges between hearing scientists working with different approaches from cell biology to psychology. The volume is organized into 10 parts. Part I contains papers on the biology of inner ear cells. Part II presents studies on auditory periphery functioning. Part III examines frequency selectivity while Part IV contains papers that deal with the subject of pitch. The papers in Part V examine the coding of intensity. Parts VI and VII discuss temporal analyses and spectral shape analysis respectively. Part VIII takes up spectro-temporal processing. Part IX covers binaural interactions and sound localization. The studies in Part X focus on pathologies such as the relations between evoked otoacoustic emissions and pure tone audiometry and the effect of short duration acoustic trauma on activity of single neurons in the ventral cochlear

nucleus The final chapter of the text is a tribute to Professor Zwicker a leading scientist in hearing who passed away some months before the symposium

Peroxisome Biology: Experimental Models, Peroxisomal Disorders and Neurological Diseases Gérard Lizard, 2021-01-08 This book provides an overview of the biology and biochemistry of peroxisomes and discusses the contribution of these organelles to peroxisomal and neurodegenerative diseases It begins with a detailed introduction to the biogenesis and metabolic functions of peroxisomes and highlights their role in oxidative stress and in lipid metabolism such as fatty acid oxidation The following chapters focus on the molecular and clinical aspects of peroxisomal disorders caused by defects in peroxisomal function In particular the biological aspects of peroxisomal biogenesis disorders such as Zellweger syndrome and Heimler syndrome are discussed This includes their underlying genetic causes as well as the biochemical and metabolic defects associated with the disorders In addition several chapters cover recent observations suggesting an association between peroxisomal dysfunction and neurodegenerative diseases such as Alzheimer s Multiple Sclerosis and other degenerative cerebellar pathologies The final section of the book discusses important cell and animal models for studying the role of peroxisomes in human diseases and presents current therapeutic strategies for their treatment This book deals with a highly topical subject that is at the heart of current research and represents a valuable contribution for all students and researchers who want to understand the complex biology of peroxisomes and their role in human diseases
