Modeling Spatial And Economic Impacts Of Disasters:

Modeling Spatial and Economic Impacts of Disasters Yasuhide Okuyama, Stephanie E. Chang, 2013-06-29 This volume is dedicated to the memory of Barclay G Jones Professor of City and Regional Planning and Regional Science at Cornell University Over a decade ago Barclay took on a fledgling area of study economic modeling of disasters and nurtured its early development He served as the social science program director at the National Center for Earthquake Engineering Research NCEER a university consortium sponsored by the National Science Foundation and the Federal Emergency Management Agency of the United States In this capacity Barclay shepherded and attracted a number of regional scientists to the study of disasters He organized a conference held in the ill fated World Trade Center in September 1995 on The Economic Consequences of Earthquakes Preparing for the Unexpected He persistently advocated the importance of social science research in an establishment dominated by less than sympathetic natural scientists and engineers In 1993 Barclay organized the first of a series of sessions on Measuring Regional Economic Effects of Unscheduled Events at the North American Meetings of the Regional Science Association International RSAI This unusual nomenclature brought attention to the challenge that disasters largely unanticipated often sudden and always disorderly pose to the regional science modeling tradition The sessions provided an annual forum for a growing coalition of researchers where previously the literature had been fragmentary scattered and episodic Since Barclay's unexpected passing in 1997 we have continued this effort in his tradition

Modeling Spatial and Economic Impacts of Disasters Yasuhide Okuyama, Stephanie E. Chang, 2004-05-18 This book brings together a collection of innovative papers on strategies for analyzing the spatial and economic impacts of disasters Natural and human induced disasters pose several challenges for conventional modeling For example disasters entail complex linkages between the natural built and socio economic environments They often create chaos and economic disequilibrium and can also cause unexpected long term structural changes Dynamic interactions among agents and behavioral adjustments in a disaster become complicated The papers in this volume make notable progress in tackling these challenges through refinements of conventional methods as well as new modeling frameworks and multidisciplinary integrative strategies The papers also provide case study applications that afford new insights on disaster processes and loss reduction strategies

Advances in Spatial and Economic Modeling of Disaster Impacts Yasuhide Okuyama, Adam Rose, 2019-11-08 This book presents essential advances in analytical frameworks and tools for modeling the spatial and economic impacts of disasters In the wake of natural disasters such as Hurricane Katrina the Haiti Earthquake and the East Japan Earthquake and Tsunami as well as major terrorist attacks the book analyzes disaster impacts from various perspectives including resilience space time extensions and decision making strategies in order to better understand how and to what extent these events impact economies and societies around the world The contributing authors are internationally recognized experts from various disciplines such as economics geography planning regional science civil

engineering and risk management Thanks to the insights they provide the book will benefit not only researchers in these and related fields but also graduate students disaster management professionals and other decision makers **Modeling Spatial and Economic Impacts of Disasters** Yasuhide Okuyama, Stephanie E. Routledge International Handbook of Complexity Economics Ping Chen,Wolfram Elsner,Andreas Pyka,2024-11-29 The Routledge International Handbook of Complexity Economics covers the historical developments and early concerns of complexity theorists and brings them into engagement with the world today In this volume a distinguished group of international scholars explore the state of the art of complexity economics and how it may deliver new and relevant insights to the challenges of the 21st century Complexity science started in 1899 when Henri Poincar described the three body problem The first approaches in economics emerged somewhat later in the 1980s driven by

the Brussels Austin school Since then complexity economics has gone through numerous developments departing from linear simplifications applying physical algorithms to evolutionary economics and big data This book covers the basic principles and methods and offers an overview of the various domains ranging from diverse fields of productivity studies agricultural economics to monetary economics as well as the current challenges such as climate change epidemics and economic inequality where complexity economics can provide insight It closes with a review of complexity political economy and policy Offering a vibrant alternative to orthodox economics this handbook is a crucial resource for advanced students researchers and economists across the disciplines of heterodox economics economic theory and econophysics

Integrated Catastrophe Risk Modeling Aniello Amendola,Tatiana Ermolieva,Joanne Linnerooth-Bayer,Reinhard Mechler,2012-12-11 Efficient and equitable policies for managing disaster risks and adapting to global environmental change are critically dependent on development of robust options supported by integrated modeling The book is based on research and state of the art models developed at IIASA International Institute for Applied Systems Analysis and within its cooperation network It addresses the methodological complexities of assessing disaster risks which call for stochastic simulation optimization methods and economic modeling Furthermore it describes policy frameworks for integrated disaster risk management including stakeholder participation facilitated by user interactive decision support tools Applications and results are presented for a number of case studies at different problem scales and in different socio economic contexts and their implications for loss sharing policies and economic development are discussed Among others the book presents studies for insurance policies for earthquakes in the Tuscany region in Italy and flood risk in the Tisza river basin in Hungary Further it investigates the economic impact of natural disasters on development and possible financial coping strategies and applications are shown for selected South Asian countries The book is addressed both to researchers and to organizations involved with catastrophe risk management and risk mitigation policies

Resilience and Urban Disasters Kamila Borsekova,Peter Nijkamp,2019 This book addresses unexpected disasters and shocks in cities and urban systems by providing quantitative and qualitative tools for impact analysis and disaster management Including environmental catastrophes political turbulence and economic shocks Resilience and Urban Disasters explores a large range of tumultuous events and key case studies to thoroughly cover these core areas In particular the socio economic impacts on urban systems that are subject to disasters are explored

Geospatial Techniques in Urban Hazard and Disaster Analysis Pamela S. Showalter,Yongmei Lu,2009-11-11 This book is the second in a series that examines how geographic information technologies GIT are being implemented to improve our understanding of a variety of hazard and disaster situations The main types of technologies covered under the umbrella of GIT as used in this volume are geographic information systems remote sensing not including ground penetrating or underwater systems and global positioning systems Our focus is on urban areas broadly defined in order to encompass rapidly growing and densely populated areas that may not be considered urban in the conventional sense The material presented

here is also unabashedly applied our goal is to provide GIT tools to those seeking more efficient ways to respond to recover from mitigate prevent and or model hazard and disaster events in urban settings Therefore this book was created not only with our colleagues in the academic world in mind but also for hazards professionals and practitioners We also believe graduate students will find the material presented here of interest as may upper division undergraduate students

Water Policy in the Netherlands Stijn Reinhard, Henk Folmer, 2011 As a low lying delta region with a high population density the Netherlands has long focused on the prevention of flooding catastrophes and the reclamation of valuable land The evolution of Dutch water governance beginning with the creation of local water boards in the Middle Ages and growing into a complex infrastructure of polders dams and controlled waterways offers a compelling study of pitfalls and successes within one of the world's most challenging regions for water management *Water Policy in the Netherlands* traces the arc of water governance in the country from technological in

Hurricanes and Climate Change James B. Elsner, Thomas H. Jagger, 2010-01-23 Recent studies suggest that tropical cyclones are more powerful than in the past with the most dramatic increase in the North Atlantic The increase is correlated with an increase in ocean temperature A debate concerns the nature of these increases with some scientists attributing them to a natural climate fluctuation and others suggesting climate change related to anthropogenic increases in forcing from greenhouse gases A Summit on Hurricanes and Climate Change was held during the spring of 2007 on the island of Crete that brought together leading academics and researchers on both sides of the scientific debate to discuss new research and express opinions about what will happen in the future with regard to hurricane activity This proceedings volume highlights the state of the science research into various aspects of the hurricane climate connection It is likely that the science presented here will lead to new research that will help answer crucial questions about our sustainable future

The Oxford Handbook of Urban Economics and Planning Nancy Brooks, Kieran Donaghy, Gerrit-Jan Knaap, 2012-01-12 This volume embodies a problem driven and theoretically informed approach to bridging frontier research in urban economics and urban regional planning The authors focus on the interface between these two subdisciplines that have historically had an uneasy relationship Although economists were among the early contributors to the literature on urban planning many economists have been dismissive of a discipline whose leading scholars frequently favor regulations over market institutions equity over efficiency and normative prescriptions over positive analysis Planners meanwhile even as they draw upon economic principles often view the work of economists as abstract not sensitive to institutional contexts and communicated in a formal language spoken by few with decision making authority Not surprisingly papers in the leading economic journals rarely cite clearly pertinent papers in planning journals and vice versa Despite the historical divergence in perspectives and methods urban economics and urban planning share an intense interest in many topic areas the nature of cities the prosperity of urban economies the efficient provision of urban services efficient systems of transportation and the proper allocation of land between urban and environmental uses In bridging this gap the book

highlights the best scholarship in planning and economics that address the most pressing urban problems of our day and stimulates further dialog between scholars in urban planning and urban economics Encyclopedia of Technological Hazards and Disasters in the Social Sciences Duane A. Gill,Liesel A. Ritchie,Nnenia M. Campbell,2024-11-08 The Encyclopedia of Technological Hazards and Disasters in the Social Sciences brings together an array of global experts to investigate explore and analyse human caused disaster events Providing insights into both the origins and aftermaths of disaster events it offers advanced understanding of a broad range of disaster events facing society during the Anthropocene

Critical Infrastructure Alan T. Murray,Tony Grubestic,2007-05-05 This text brings together differing geographic perspectives in modeling and analysis in order to highlight infrastructure weaknesses or plan for their protection Offering new methodological approaches the book explores the potential consequences of critical infrastructure failure stemming from both man made and natural disasters The approaches employed are wide ranging including geographic economic and social perspectives
