**A First Course in Probability Models and Statistical Inference** James H.C. Creighton,2012-12-06 Welcome to new territory A course in probability models and statistical inference The concept of probability is not new to you of course You ve encountered it since childhood in games of chance card games for example or games with dice or coins And you know about the 90% chance of rain from weather reports But once you get beyond simple expressions of probability into more subtle analysis it s new territory And very foreign territory it is You must have encountered reports of statistical results in voter surveys opinion polls and other such studies but how are conclusions from those studies obtained How can you interview just a few voters the day before an election and still determine fairly closely how HUNDREDS of THOUSANDS of voters will vote That s statistics You ll find it very interesting during this first course to see how a properly designed statistical study can achieve so much knowledge from such drastically incomplete information It really is possible statistics works But HOW does it work By the end of this course you ll have understood that and much more Welcome to the enchanted forest *Maps to Modeling* Aashish Balkhande,2020-12-13 Maps to modeling is intended for aspiring fashion models seeking to understand the inner mechanics of the industry As one charts this uncharted territory It becomes seemingly difficult to identify if someone within the industry is well intended or ill willed This book attempt to address many fundamental stages in your early stages of modeling and hopes to see you become familiar with the terrains and focus better on your goals Topics covered in the book

are Exploring the fashion industry Learning industry lingo its language The mindset approach Picking understanding the dichotomy in Traditional fashion modeling Instagram modeling What the industry hides from you why How you can build yourself physically mentally emotionally Spotting a fraud How to not get scammed Agencies and how they manipulate so on The author has made this book available for free to encourage higher safety for models at every stage of their careers He wishes to see you succeed and hopes some of your parents to realise you made the right decisions all you needed was guidance

**The What and How of Modelling Information and Knowledge** C. Maria Keet,2023-11-17 The main aim of this book is to introduce a group of models and modelling of information and knowledge comprehensibly Such models and the processes for how to create them help to improve the skills to analyse and structure thoughts and ideas to become more precise to gain a deeper understanding of the matter being modelled and to assist with specific tasks where modelling helps such as reading comprehension and summarisation of text The book draws ideas and transferrable approaches from the plethora of types of models and the methods techniques tools procedures and methodologies to create them in computer science This book covers five principal declarative modelling approaches to model information and knowledge for different yet related purposes It starts with entry level mind mapping to proceed to biological models and diagrams onward to conceptual data models in software development and from there to ontologies in artificial intelligence and all the way to ontology in philosophy Each successive chapter about a type of model solves limitations of the preceding one and turns up the analytical skills a notch These what and how for each type of model is followed by an integrative chapter that ties them together comparing their strengths and key characteristics ethics in modelling and how to design a modelling language In so doing we ll address key questions such as what type of models are there How do you build one What can you do with a model Which type of model is best for what purpose Why do all that modelling The intended audience for this book is professionals students and academics in disciplines where systematic information modelling and knowledge representation is much less common than in computing such as in commerce biology law and humanities And if a computer science student or a software developer needs a quick refresher on conceptual data models or a short solid overview of ontologies then this book will serve them well
