Congress. House. Committee on Armed Services. Subcommittee on Readiness, 2010      **The What and How of Modelling Information and Knowledge** C. Maria Keet, 2023-11-17 The main aim of this book is to introduce a group of models and modelling of information and knowledge comprehensibly Such models and the processes for how to create them help to improve the skills to analyse and structure thoughts and ideas to become more precise to gain a deeper understanding of the matter being

modelled and to assist with specific tasks where modelling helps such as reading comprehension and summarisation of text. The book draws ideas and transferrable approaches from the plethora of types of models and the methods, techniques, tools, procedures and methodologies to create them in computer science. This book covers five principal declarative modelling approaches to model information and knowledge for different yet related purposes. It starts with entry level mind mapping to proceed to biological models and diagrams, onward to conceptual data models in software development and from there to ontologies in artificial intelligence and all the way to ontology in philosophy. Each successive chapter about a type of model solves limitations of the preceding one and turns up the analytical skills a notch. These what and how for each type of model is followed by an integrative chapter that ties them together, comparing their strengths and key characteristics, ethics in modelling and how to design a modelling language. In so doing, we'll address key questions such as: what type of models are there? How do you build one? What can you do with a model? Which type of model is best for what purpose? Why do all that modelling? The intended audience for this book is professionals, students and academics in disciplines where systematic information modelling and knowledge representation is much less common than in computing, such as in commerce, biology, law and humanities. And if a computer science student or a software developer needs a quick refresher on conceptual data models or a short solid overview of ontologies, then this book will serve them well.

**Real-World Natural Language Processing** Masato Hagiwara, 2021-12-14. Training computers to interpret and generate speech and text is a monumental challenge and the payoff for reducing labor and improving human computer interaction is huge. The field of Natural language processing (NLP) is advancing rapidly with countless new tools and practices. This unique book offers an innovative collection of NLP techniques with applications in machine translation, voice assistants, text generation and more. Real world natural language processing shows you how to build the practical NLP applications that are transforming the way humans and computers work together. Guided by clear explanations of each core NLP topic, you'll create many interesting applications including a sentiment analyzer and a chatbot. Along the way, you'll use Python and open source libraries like AllenNLP and HuggingFace Transformers to speed up your development process.
