 Models and Mirrors Don Handelmann, 1998 Ritual is one of the most discussed cultural practices yet its treatment in anthropological terms has been seriously limited characterized by a host of narrow conceptual distinctions One major reason for this situation has been the prevalence of positivist anthropologies that have viewed and summarized ritual occasions first and foremost in terms of their declared and assumed functions By contrast this book which has become a classic investigates them as epistemological phenomena in their own right Comparing public events a domain which includes ritual and related occasions the author argues that any public event must first be comprehended through the logic of its design It is the logic of organization of an occasion which establishes in large measure what that occasion is able to do in relation to the world within which it is created and practiced
 Cultures of Infancy Heidi Keller, 2022-05-26 The Classic Edition of Heidi Keller's Cultures of Infancy first published in 2007 includes a new introduction by the author which describes for readers the original context of her work how she has further developed her research and thinking and the ongoing relevance of this volume in the context of future challenges for the field In its original volume Cultures of Infancy presented the first systematic analysis of culturally informed developmental pathways synthesizing evolutionary and cultural psychological perspectives for a broader understanding of human development In this compelling book Heidi Keller utilizes ethnographic reports as well as quantitative and qualitative analyses to illustrate how humans resolve universal developmental tasks in particular sociodemographic contexts These contexts are represented in cultural models with three distinct models addressed throughout the text the model of independence with autonomy as

developmental organizer the model of interdependence with relatedness as the developmental organizer and the model of autonomous relatedness representing particular mixtures of autonomy and relatedness The book offers an empirical examination of the first integrative developmental task during the early months of life relationship formation Keller shows that early parenting experiences shape the basic foundation of the self within particular models of parenting that are influenced by culturally informed socialization goals With distinct patterns of results that the studies have revealed Cultures of Infancy helps redefine developmental psychology as part of a culturally informed science based on evolutionary groundwork Scholars interested in a broad perspective on human development and culture will benefit from this pioneering volume

The Global Model of Constitutional Rights Kai Möller, 2012-10-25 Since the end of the Second World War and the subsequent success of constitutional judicial review one particular model of constitutional rights has had remarkable success first in Europe and now globally This global model of constitutional rights is characterized by an extremely broad approach to the scope of rights sometimes referred to as rights inflation the acceptance of horizontal effect of rights positive obligations and increasingly also socio economic rights and the use of the doctrines of balancing and proportionality to determine the permissible limitations of rights Drawing on analyses of a broad range of cases from the UK the European Court of Human Rights Germany Canada the US and South Africa this book provides the first substantive moral reconstructive theory of the global model It shows that it is based on a coherent conception of constitutional rights which connects to attractive accounts of judicial review democracy and the separation of powers The first part of the book develops a theory of the scope of rights under the global model It defends the idea of a general right to personal autonomy a right to everything which according to the agent's self conception is in his or her interest The function of this right is to acknowledge that every act by a public authority which places a burden on a person's autonomy requires justification The second part of the book proposes a theory of the structure of this justification which offers original and useful accounts of the important doctrines of balancing and proportionality

Bio A.I. - From Embodied Cognition to Enactive Robotics Adam Safron, Inês Hipólito, Andy Clark, 2023-12-08 Even before the deep learning revolution the landscape of artificial intelligence AI was already changing drastically in the 90s Embodied intelligence it was proposed must play a crucial role in the design of intelligent machines This new wave was inspired by what is today known as Embodied and Enactive Cognitive Science or E Cognition which considers that cognitive activity does not reduce to the intellectual capacities of agents being able to represent their environments E cognition set AI and robotics in a new direction in which

intelligent machines are required to interact with the environment and where this interaction does not reduce to explicit representations or prespecified algorithms These ideas revolutionized the way we think about intelligent machines and cognition but these theoretical advances are only partially reflected in modern approaches to AI and machine learning ML Despite deeply impressive achievements AI ML still struggles to recapitulate the kinds of intelligence we find in natural systems whether we are considering individual insects e g simultaneous localization and mapping or swarm behaviour e g foraging sensing and ensemble inferences and especially the kinds of flexibility and high level reasoning characteristic of human cognition

Models and World Making Annabel Jane Wharton,2022-01-14 From climate change forecasts and pandemic maps to Lego sets and Ancestry algorithms models encompass our world and our lives In her thought provoking new book Annabel Wharton begins with a definition drawn from the quantitative sciences and the philosophy of science but holds that history and critical cultural theory are essential to a fuller understanding of modeling Considering changes in the medical body model and the architectural model from the Middle Ages to the twenty first century Wharton demonstrates the ways in which all models are historical and political Examining how cadavers have been described exhibited and visually rendered she highlights the historical dimension of the modified body and its depictions Analyzing the varied reworkings of the Holy Sepulchre in Jerusalem including by monumental commanderies of the Knights Templar Alberti s Rucellai Tomb in Florence Franciscans olive wood replicas and video game renderings she foregrounds the political force of architectural representations And considering black boxes instruments whose inputs we control and whose outputs we interpret but whose inner workings are beyond our comprehension she surveys the threats posed by such opaque computational models warning of the dangers that models pose when humans lose control of the means by which they are generated and understood Engaging and wide ranging *Models and World Making* conjures new ways of seeing and critically evaluating how we make and remake the world in which we live

Dramatic Experiments Eyal Peretz, 2013-09-26 Dramatic Experiments offers a comprehensive study of Denis Diderot one of the key figures of European modernity Diderot was a French Enlightenment philosopher dramatist art critic and editor of the first major modern encyclopedia He is known for having made lasting contributions to a number of fields but his body of work is considered too dispersed and multiform to be unified Eyal Peretz locates the unity of Diderot s thinking in his complication of two concepts in modern philosophy drama and the image Diderot s philosophical theater challenged the work of Plato and Aristotle inaugurating a line of drama theorists that culminated in the twentieth century with Bertolt Brecht and Antonin Artaud His interest in the artistic image turned him into the first great modern theorist of painting and perhaps the most influential art critic of modernity With these innovations Diderot provokes a rethinking of major philosophical problems relating to life the senses history and appearance and reality and more broadly a rethinking of the relation between philosophy and the arts Peretz shows Diderot to be a radical thinker well ahead of his time whose philosophical effort bears comparison to projects such as Gilles Deleuze s transcendental empiricism Martin Heidegger s fundamental ontology Jacques Derrida s deconstruction and Jacques Lacan s psychoanalysis

Sickness and

Healing Robert A. Hahn, 1995 Hahn begins by developing a definition of sickness that is based on the patient's perception of suffering and disturbance rather than on the physician's assessment of biomedical signs. After reviewing the principal theories that account for the forms of sickness and healing found in different historical and cultural contexts, he explores the relevance of both anthropological and epidemiological approaches to sickness, focusing on the persistent gap between white and black infant mortality in the United States. Hahn then describes contemporary Western medicine as it might be seen by a visiting foreign anthropologist.

Imogene King's Conceptual Framework and Theory of Goal Attainment Diana Newman, Beverly J. Whelton, Stacey Marye, Nancy E. Loos, 2025-07-09 Imogene King 1923-2007 was a major 20th-century thought leader for professional nursing practice. The texts and articles she wrote challenged nurse scholars to think conceptually about nursing practice. King's Conceptual Systems and Theory of Goal Attainment were formative in the nursing theory movement, which was a part of the professionalization of the nursing practice. This text, the first book that originates from within the King International Nursing Group, makes the systems framework and theory of Imogene King relevant for today's practitioners and displays the value of this theory to improve clinical nursing practice. The personal and professional biographical content is broad and broaches such topics as spirituality, vulnerable populations, ethics, nurse listening behaviors, as foundational nursing practice philosophy, professional role, and shared governance, reflecting the continued relevance of King's work both in the United States and around the globe, with a focus on outcomes.

Big Theories Revisited 2 Gregory Arief D. Liem, Dennis M. McInerney, 2018-04-01 Students' school motivation and engagement are key contributors to the quality of their academic learning and performance, as well as growth in other important areas of life: social, emotional, and physical health. Fostering motivation and engagement is thus a meaningful educational purpose, both in and of itself and as a pathway to holistic student development. However, motivation and engagement do not develop in a vacuum, and effort seeking to facilitate them cannot be effectively pursued without understanding their underpinning sociocultural influences. In the first edition of this volume, *Big Theories Revisited*, McInerney and Van Etten (2004), authors of major models of school motivation and engagement, were challenged to look into their theoretical work through a sociocultural lens. The volume has been well received, as objectively reflected in the number of citations of its chapters. Significant progress has since been made in the theorizing and research of big theories of school motivation and engagement. In this volume, we invited a group of internationally renowned scholars to re-examine their theoretical and conceptual work by highlighting the what factors and how processes of sociocultural influences in association with the key motivation and/or engagement constructs of their expertise. We made it clear to our contributors that we solicited new chapters rather than chapters with merely rehashed materials. As a result, this volume, *Big Theories Revisited 2*, Liem and McInerney (2018) contains chapters that critically discuss sociocultural influences on school motivation and engagement constructs as viewed from focal theories, including self-determination theory, achievement goal theory, personal investment theory, expectancy-value theory, self-efficacy theory, self-

and co regulated learning models and many others Whereas some of the chapter topics covered in the initial edition are also part of this edition some are new and provide fresh sociocultural angles on achievement relevant processes and outcomes Likewise whereas some of the authors contributed to the earlier edition of the Volume many of them are different What appears to be the same across the two editions is the scholarly distinction of the authors and the substantive rigor of the chapters in advancing our current understanding of this field of enquiry Readers will learn much from and be inspired by stimulating ideas presented in this volume Handbook of Labor Economics Orley Ashenfelter, David Card, 2010-10-28 What new tools and models are enriching labor economics Developments in Research Methods and their Application Volume 4A summarizes recent advances in the ways economists study wages employment and labor markets Mixing conceptual models and empirical work contributors cover subjects as diverse as field and laboratory experiments program evaluation and behavioral models The combinations of these improved empirical findings with new models reveal how labor economists are developing new and innovative ways to measure key parameters and test important hypotheses Investigates recent advances in methods and models used in labor economics Demonstrates what these new tools and techniques can accomplish Documents how conceptual models and empirical work explain important practical issues *Virtual Environments and Advanced Interface Design* Woodrow Barfield, Thomas A. Furness, 1995-06 Virtual Environments and Advanced Interface Design is a volume of original chapters to introduce the reader to the technology of virtual reality The research presented in this book examines the impact of the new technology of virtual reality on the field of human factors The first editor Barfield is head of the Human Factor Laboratory at the University of Washington in the USA and he has assembled contributions from experts in key laboratories around the US to discuss their basic approaches to this new field Some of the topics discussed are computer graphics eye tracking tactile and kinesthetic input interface design and applications in medicine and aerospace
