Models for Concrete Structures, 1970 **Mix Design for Small-scale Models of Concrete Structures** D. S. Fuss, 1968 *Computational Modelling of Concrete Structures* Nenad Bicanic, René Borst, Herbert Mang, Gunther Meschke, 2010-02-24 Since 1984 the EURO C conference series Split 1984 Zell am See 1990 Innsbruck 1994 Badgastein 1998 St Johann im Pongau 2003 Mayrhofen 2006 Schladming 2010 has provided a forum for academic discussion of the latest theoretical algorithmic and modelling developments associated with computational simulations of concrete and concrete structure **Models for Concrete Structures...** American Concrete Institute, 1970 **Physical Models for Concrete Structures** Guido Oberti, 1980 *Modeling of Inelastic Behavior of RC Structures Under Seismic Loads* P. Benson Shing, Tada-aki Tanabe, 2001-01-01 Proceedings of the U S Japan Seminar on Post Peak Behavior of Reinforced Concrete Structures Subjected to Seismic Loads Recent Advances and Challenges on Analysis and Design held in Tokyo and Lake Yamanaka Japan October 25 29 1999 Sponsored by the National Science Foundation U S A Japan Society for the Promotion of Science Japan Concrete Institute This collection presents the latest ideas and findings on the inelastic behavior of reinforced concrete RC structures from the analysis and design standpoints These papers discuss state of the art concrete material models and analysis methods that can be used to simulate and understand the inelastic behavior of RC structures as well as design issues that can improve the seismic performance of these structures Topics include modeling of concrete behavior modeling of RC structures finite element approach and macro element approach and experimental studies analysis and design issues **Preprints**, 1972 **Computational Modelling of Concrete and Concrete Structures** Günther Meschke, Bernhard Pichler, Jan G. Rots, 2022-05-22 Computational Modelling of Concrete and Concrete Structures contains the contributions to the EURO C 2022 conference Vienna Austria 23 26 May 2022 The papers review and discuss research advancements and assess the applicability and robustness of methods and models for the analysis and design of concrete fibre reinforced and prestressed concrete structures as well as masonry structures Recent developments include methods of machine learning novel discretisation methods probabilistic models and consideration of a growing number of micro structural aspects in multi scale and multi physics settings In addition trends towards the material scale with new fibres and 3D printable concretes and life cycle oriented models for ageing and durability of existing and new concrete infrastructure are clearly visible Overall computational robustness of numerical predictions and mathematical rigour have further increased accompanied by careful model validation based on respective experimental programmes The book will serve as an important reference for both academics and professionals stimulating new research directions in the field of computational modelling of concrete and its application to the analysis of concrete structures EURO C 2022 is the eighth edition of the EURO C conference series after Innsbruck 1994 Bad Gastein 1998 St Johann im Pongau 2003 Mayrhofen 2006 Schladming 2010 St

Design Examples for Strut-and-tie Models fib Fédération internationale du béton, 2011 fib Bulletin 61 is a continuation of fib Bulletin 16 2002 Again the bulletin's main objective is to demonstrate the application of the FIP Recommendations Practical Design of Structural Concrete and especially to illustrate the use of strut and tie models to design discontinuity regions D regions in concrete structures Bulletin 61 presents 14 examples most of which are existing structures built in recent years Although some of the presented structures can be considered to be quite important and in some instances complex the chosen examples are not intended to be exceptional The main aim is to look at specific design aspects by selecting D regions of the presented structures that are designed and detailed according to the proposed design principles and specifications for the use of strut and tie models Two papers at the end of the bulletin deal with the role of concrete tension fields in modelling with strut and tie models and summarize the experiences gained by the Working Group in applying strut and tie models to the examples in the bulletin It is hoped that fib Bulletin 61 will be of interest to engineers involved in the design of concrete structures supporting the use of more consistent design and detailing tools such as strut and tie models **Small Scale Direct Models of Reinforced and Prestressed Concrete Structures** Haralambos George Harris, Harry G. Harris, Gajanan M. Sabnis, Richard N. White, 1966 *Computer Models of Concrete Structures* Vladimir Červenka, Rolf Eligehausen, Radomir Pukl, 1991 Models for Concrete Structures. 7 of These Papers Were Presented at the 64. ACI Annual Convention, Los Angeles, Calif. 1968 , 1970 **Small-Scale Models of Concrete Structures** Richard N. Multi-Scale Modeling of Structural Concrete Koichi Maekawa, Tetsuya Ishida, Toshiharu Kishi, 2008-11-28 Increases in computer power have now enabled engineers to combine materials science with structural mechanics in the design and the assessment of concrete structures The techniques developed have become especially useful for the performance assessment of such structures under coupled mechanistic and environmental actions This allows effective man *Reinforced Concrete Structures under Cyclic Loading* Farhad Aslani, 2015-03-14 Experimental programs in laboratories give real results to identify nonlinear behavior of reinforced concrete RC structures but they are limited to knowledge of particular cases under restricted structural dimensions sizes shapes loading and boundary conditions but the computational simulation approach has no limit to its application Constitutive models are developed to simulate the dynamic nonlinear response of concrete and steel reinforcement subjected to cyclic loading varying randomly in magnitude The behavior of structural concrete under monotonic loading is affected by important material aspects including cracking crushing tension stiffening compression softening and bond slip Reversed cyclic loading introduces further complexities such as stiffness degradation in concrete and the Bauschinger effect in reinforcing steel In this research the validity and reliability of some proposed constitutive models

for concrete considering general loading i.e cyclic monotonic partial common point and transition loading are evaluated Comparisons with test results showed that the proposed model provides a good fit to a wide range of experimentally established hysteresis loops fib Model Code for Concrete Structures 2010 fib - fédération internationale du béton,2013-10-01 The International Federation for Structural Concrete fib is a pre normative organization Pre normative implies pioneering work in codification This work has now been realized with the fib Model Code 2010 The objectives of the fib Model Code 2010 are to serve as a basis for future codes for concrete structures and present new developments with regard to concrete structures structural materials and new ideas in order to achieve optimum behaviour The fib Model Code 2010 is now the most comprehensive code on concrete structures including their complete life cycle conceptual design dimensioning construction conservation and dismantlement It is expected to become an important document for both national and international code committees practitioners and researchers The fib Model Code 2010 was produced during the last ten years through an exceptional effort by Joost Walraven Convener Delft University of Technology The Netherlands Agnieszka Bigaj van Vliet Technical Secretary TNO Built Environment and Geosciences The Netherlands as well as experts out of 44 countries from five continents **Application of Constitutives [i.e. Constitutive] Models to Concrete Structures** Mohamed Aboussalah,1989
