The "How To" Grants Manual David G. Bauer, 2015-03-17. This book breaks down the sometimes overwhelming and difficult task of creating a successful grant winning proposal into a series of clear and definable steps that lead to grant success. The implementation of these proactive grant steps results in government foundation and corporate grants success. Whether you are with a non profit organization, a school district, or an institution of higher education, this step by step process will demystify the grants process and help you become a confident and knowledgeable grantseeker. Researching the grantor, reviewing previously funded proposals, and making pre proposal contact with the funding source are just a few of the proactive steps that will help to assure you that what you propose is right for the grantor and that the grantor should therefore select you to fund. The exhibits, worksheets in *The How To Grants Manual* further support this successful system. Revisions to grant seeking strategies have caused the author, working with grantors and advisory groups, to retool the manual's worksheets and communications templates. These extremely useful supplementary materials are available to students and instructors. Contact textbooksrowman.com for details. If your organization or institution wants to increase your success in attracting grants, this book is for you. From operating grants to technology to research, this book will help you outline your plan for success.

The Topological Model of Genome and Evolution Pradeep Chhaya, 2023-09-19 This book deals with the missing link in the domain of functional genomics viz genomic architecture It begins with a deconstruction of the Darwinian paradigm using the proposed model of modified involuted manifolds It recasts the process of natural selection as a process of information transfer Using a topological model this book outlines a new genomic architecture The key argument for this proposed model is that some such structuralism has always been implicit in genomics The proposed model fits very well with the known genomic characteristics and allows to separate the regulatory genome from the transcriptive genomes The model is capable of discerning modular architecture of genomes with different genomic functionalities existing in hierarchical relationships and demonstrates that genomes act as units of selection and as the environment for the individual genes which act as competing species Towards the end the book also examines the role of genomic evolution in cancer and the principles of natural selection and evolution of the genotype The regulatory genome is also discussed with an emphasis on its evolution and natural selection It is a valuable source for researchers working in
