THE ACCULTURATION MODEL

Introduction

The Acculturation Model is one of the theories of second language acquisition proposed by John Schumann in 1978. The acculturation Model came into light by the practical study of Schumann on the non-English learners.

Definitions

The process of acculturation was defined by Brown as:

"the process of being adapted to a new culture" which involves a new orientation of thinking and feeling on the part of an L2 learner.

According to Oxford Learners' Dictionary, acculturation is:

"the process of learning to live successfully in a different culture; the process of helping somebody to do this. In other words, it stands for assimilation or digestion to a different culture, typically the dominant one".

Models Of Language Acquisition:

Computational Modeling of Human Language Acquisition Afra Alishahi, 2011 In doing so computational modeling provides insight into the plausible mechanisms involved in human language acquisition and inspires the development of better language models and techniques This book provides an overview of the main research questions in the field of human language acquisition It reviews the most commonly used computational frameworks methodologies and resources for modeling child language learning and the evaluation techniques used for assessing these computational models The book is aimed at cognitive scientists who want to become familiar with the available computational methods for investigating problems related to human language acquisition as well as computational linguists who are interested in applying their skills to the study of child language acquisition

Models of Language Acquisition Peter Broeder, Jaap Murre, 2000 This book presents recent advances by leading researchers in computational modelling of language acquisition Sophisticated theoretical models can now be tested using simulation techniques and large corpora of linguistic data Renewed interest in learning neural networks and the ability to test new solutions to fundamental problems has fuelled debates in an already very active field The twenty four authors in this collection of new work have been drawn from departments of linguistics cognitive science psychology and computer science The book as a whole shows what light may be thrown on fundamental problems when powerful computational techniques are combined with real data A central question addressed in the book concerns the extent to which linguistic structure is readily available in the environment The authors consider the evidence in relation to word boundaries and phonotactic structure stress patterns text to speech rules and the mapping of lexical semantics one author arguing that a child's own output may serve as a key source of linguistic input Linguistic structure environment relations are central to the debate on the degree to which language learning is inductive or deductive this issue is considered here in studies of the acquisition of pluralization and inflectional morphology The book examines the power and utility of different modeling formalisms for different problems and approaches how far for example can connectionist models be used as models for language acquisition or Simple Recurrent Networks form the basis of a model of language acquisition To what degree can lexical items and categories be used in the construction of neural network models or Markov chains be deployed to investigate the characteristics of a general language learning algorithm Triggering Learning Algorithm This book will appeal to linguists psychologists cognitive scientists working in language acquisition It will also interest those involved in computational modelling in linguistics and behavioural science

Handbook of Cognitive Linguistics and Second Language Acquisition Peter Robinson,Peter Jake Robinson,Nick C. Ellis,2008-02-21 Cognitive Linguistics Cl is an approach to the study of language informed by both linguistics and psychology It describes how language interfaces with cognition and how it adapts in the course of language usage phylogenetically in language evolution ontogenetically in language acquisition and moment to moment in situated on line language processing and performance Second language Acquisition SLA involves the study of the cognitive representations and mechanisms of second language processing their time course of acquisition and where possible and feasible their relevance to instruction The Handbook of Cognitive Linguistics and Second language Acquisition brings these two areas of theory and research together

Cognitive Aspects of Computational Language Acquisition Aline Villavicencio,Thierry Poibeau,Anna Korhonen,Afra Alishahi,2013-01-11 Questions related to language acquisition have been

of interest for many centuries as children seem to acquire a sophisticated capacity for processing language with apparent ease in the face of ambiguity noise and uncertainty However with recent advances in technology and cognitive related research it is now possible to conduct large scale computational investigations of these issues The book discusses some of the latest theoretical and practical developments in the areas involved including computational models for language tasks tools and resources that help to approximate the linguistic environment available to children during acquisition and discussions of challenging aspects of language that children have to master This is a much needed collection that provides a cross section of recent multidisciplinary research on the computational modeling of language acquisition It is targeted at anyone interested in the relevance of computational techniques for understanding language acquisition Readers of this book will be introduced to some of the latest approaches to these tasks including Models of acquisition of various types of linguistic information from words to syntax and semantics and their relevance to research on human language acquisition Analysis of linguistic and contextual factors that influence acquisition Resources and tools for investigating these tasks Each chapter is presented in a self contained manner providing a detailed description of the relevant aspects related to research on language acquisition and includes illustrations and tables to complement these in depth discussions Though there are no formal prerequisites some familiarity with the basic concepts of human and computational language acquisition is beneficial

Models of Inflection Ray Fabri, Albert Ortmann, Teresa Parodi, 2013-02-06 The aim of the volume is to contribute towards a better understanding of inflectional morphology as well as to provide a platform for researchers to discuss their results in the light of the particular framework they have chosen to work in The first paper provides an overview of the main controversies within the area of inflection Other papers deal with general aspects such as the difference between derivation and inflection irregular verb inflection animacy and clitics These are followed by studies on functional categories the acquisition of inflection a formal implementation of Russian verb inflection and finally articles that deal specifically with aspects of German inflection

Connectionist Models of Development Philip T. Quinlan, 2004-03 Connectionist Models of Development is an edited collection of essays on the current work concerning connectionist or neural network models of human development The brain comprises millions of nerve cells that share myriad connections and this book looks at how human development in these systems is typically characterised as adaptive changes to the strengths of these connections The traditional accounts of connectionist learning based on adaptive changes to weighted connections are explored alongside the dynamic accounts in which networks generate their own structures as learning proceeds Unlike most connectionist accounts of psychological processes which deal with the fully mature system this text brings to the fore a discussion of developmental processes To investigate human cognitive and perceptual development connectionist models of learning and representation are adopted alongside various aspects of language and knowledge acquisition There are sections on artificial intelligence and how computer programs have been designed to mimic the development processes as well as chapters which describe what is

currently known about how real brains develop This book is a much needed addition to the existing literature on connectionist development as it includes up to date examples of research on current controversies in the field as well as new features such as genetic connectionism and biological theories of the brain It will be invaluable to academic researchers post graduates and undergraduates in developmental psychology and those researching connectionist neural networks as well as those in related fields such as psycholinguistics
