ABSTRACT

Capital structure has been one of the most controversial and debatable topics in corporate finance theory since the birth of Modigliani and Miller's (MM) first capital structure irrelevancy theory in 1958. Following MM's (1958) first quantitative theorem, several finance economists and scholars across the globe have theorized and empirically investigated to clarify the nature of corporate capital structure and the impact of a firm's capital structure decision on its value and financial performance. This review article briefly overviews the evolution of modern capital structure theory in the corporate finance literature, from its classical root (MM capital structure irrelevance theory) to its recent development (BFO theory). The paper compares and contrasts the arguments of invaluable theoretical papers to comprehend the strengths and weaknesses of each theory. The review indicates that there is no universal capital structure theory that comprehensively explains the real-world financing behavior of firms and the capital structure-firm performance nexus. In other words, the capital structure puzzle is still unsolved in corporate finance literature.

Keywords: Modigliani-Miller, capital structure, theory, debt, equity, leverage, corporate finance, TOT, POT.

1 Introduction

The first generally accepted quantitative theory about capital structure was traced back to 1958 when Modigliani and Miller (MM) published the most influential article ever written in the field of corporate finance. Their theory was widely known as the "irrelevance theory of capital structure". The irrelevance theory algebraically contended that a firm could not change its market value by altering the proportions of the firm's debt-equity mix in the capital structure. Put in other words, the theorem of MM quantitatively argued that a firm's capital structure (financing) choice does not affect its performance (market value), and thus it is value-irrelevant (Modigliani & Miller, 1958). Indeed, the theory envisaged an "ideal business world" to come to this conclusion. The irrelevance theory hinges on the assumption that firms operate in a perfect capital market world where, for instance, there are no corporate and personal taxes, no bankruptcy costs, no information asymmetry, and no other market imperfections exist.

The criticisms of a set of restrictive assumptions that lack applicability in the real world forced MM to revise their original position. Consequently, they introduced corporate income taxes in their first model in 1963 while maintaining other perfect capital market conditions of the first theorem. The rationale behind this move was realizing that the Tax Act allows firms to deduct interest payments on the debt as an expense, and debt-using firms would benefit from an interest tax shield in the real business world (Sibindi, 2016). The findings of the new theory (1963) asserted that a firm's market value increases with the increase in debt due to the interest tax shield of debt. Thus, MM (1963) suggest firms employ as much debt capital as possible to maximize their values. Nevertheless, MM's revised model failed to address the risks related to the increased debt, like the costs of financial distress that may lead to a firm going bankrupt. It also ignored personal taxes, information asymmetry, and many other real-world market imperfection elements that strongly influence the capital structure decisions of firms.

In response to the shortcomings of the seminal works of MM (1958; 1963), several newer capital structure theories that comply with the real-world scenario were developed over time. The prominent ones are the trade-off theory (Kraus & Litzenberger, 1973), agency cost theory (Jensen & Meckling, 1976; Jensen, 1986), signaling theory (Ross, 1977), pecking order theory (Myers & Majluf, 1984; Myers, 1984), market timing theory (Baker & Wurgler, 2002), and BFO theory (Beason et al., 2011). Even if each of these theories proposed different competing arguments, they all agree that capital structure decision considerably affects firm performance and is thus value-relevant. For instance, the agency cost theory argues that higher leverage is expected to reduce managerial inefficiency and boost firm performance. In contrast, the pecking-order theory advocates internal financing for its

Livingston, 2000-11-09 The rise of corporate capitalism was a cultural revolution as well as an economic event according to James Livingston That revolution resides he argues in the fundamental reconstruction of selfhood or subjectivity that attends the advent of an age of surplus under corporate auspices From this standpoint consumer culture represents a transition to a society in which identities as well as incomes are not necessarily derived from the possession of productive labor or property From the same standpoint pragmatism and literary naturalism become ways of accommodating the new forms of solidarity and subjectivity enabled by the emergence of corporate capitalism So conceived they become ways of articulating alternatives to modern possessive individualism Livingston argues accordingly that the flight from pragmatism led by Lewis Mumford was an attempt to refurbish a romantic version of modern possessive individualism This attempt still shapes our reading of pragmatism Livingston claims and will continue to do so until we understand that William James was not merely a well meaning middleman between Charles Peirce and John Dewey and that James's pragmatism was both a working model of postmodern subjectivity and a novel critique of capitalism *Capital in Disequilibrium* Peter Lewin, 1998-12-17 Drawing on the work of the Austrian School and its heirs *Capital in Disequilibrium* develops a modern systematic version of capital theory in order to suggest a new approach to the subject of economics Original and provocative in his reflection Lewin offers both a new approach and an accessible discussion of one of the most important but also one of the most difficult areas in economics
