Modern Logic — A Survey E. Agazzi, 2012-12-06 Logic has attained in our century a development incomparably greater than in any past age of its long history and this has led to such an enrichment and proliferation of its aspects that the problem of some kind of unified comprehension of this

discipline seems nowadays unavoidable This splitting into several subdomains is the natural consequence of the fact that Logic has intended to adopt in our century the status of a science This always implies that the general optics under which a certain set of problems used to be considered breaks into a lot of specialized sectors of inquiry each of them being characterized by the introduction of specific viewpoints and of technical tools of its own The first impression that often accompanies the creation of one of such specialized branches in a discipline is that one has succeeded in isolating the scientific core of it by restricting the somehow vague and redundant generality of its original philosophical configuration But after a while it appears that some of the discarded aspects are indeed important and a new specialized domain of investigation is created to explore them By following this procedure one finally finds himself confronted with such a variety of independent fields of research that one wonders whether the fact of labelling them under a common denomination be nothing but the contingent effect of a pure historical tradition *Changing Rational Standards* Joseph Grünfeld, 1985

Philosophy Tom Sorell, 1993 Modern philosophy in the West is said to have begun with Bacon and Descartes Their methodological and metaphysical writings in conjunction with the discoveries that marked the seventeenth century scientific revolution are supposed to have interred both Aristotelian and scholastic science and the philosophy that supported it But did the new or modern philosophy effect a complete break with what preceded it Were Bacon and Descartes untainted by scholastic influences The theme of this book is that the new and traditional philosophies have more in common than the orthodox account suggests In two survey articles and thirteen essays on individual philosophers the contributors show that the rise of modern philosophy was much more complicated and much more interesting than is usually thought They consider not only metaphysics and the sciences but also claims of Machiavelli Hobbes and Spinoza to have invented modern ethics and politics These two aspects of modernity in philosophy are connected for the first time The book offers a broad view of the early modern philosophers covering not only the much studied major figures but also relatively neglected writers Mersenne Gassendi White and Sergeant *Catalogue* Boston University, 1921 **The Vienna Circle** Friedrich Stadler, 2015-05-08 This abridged and revised edition of the original book Springer Wien New York 2001 offers the only comprehensive history and documentation of the Vienna Circle based on new sources with an innovative historiographical approach to the study of science With reference to previously unpublished archival material and more recent literature it refutes a number of widespread clichés about neo positivism or logical positivism Following some insights on the relation between the history of science and the philosophy of science the book offers an accessible introduction to the complex subject of the rise of scientific philosophy in its socio cultural background and European philosophical networks till the forced migration in the Anglo Saxon world The first part of the book focuses on the origins of Logical Empiricism before World War I and the development of the Vienna Circle in Red Vienna with the Verein Ernst Mach its fate during Austro Fascism Schlick's murder 1936 and its final expulsion by National Socialism beginning with the Anschluss in 1938 It analyses the dynamics of the Schlick Circle in the intellectual context of late enlightenment including the minutes of the meetings from 1930 on for the first time published and presents an extensive description of the meetings and international Unity of Science conferences between 1929 and 1941 The chapters introduce the leading philosophers of the Schlick Circle e.g. Hans Hahn Otto Neurath Rudolf Carnap Philipp Frank Felix Kaufmann Edgar Zilsel and describe the conflicting interaction between Moritz Schlick and Otto Neurath the long term communication between Moritz Schlick Friedrich Waismann and Ludwig Wittgenstein as well as between the Vienna Circle with Heinrich Gomperz and Karl Popper In addition Karl Menger's Mathematical Colloquium with Kurt Gödel is presented as a parallel movement The final chapter of this section describes the demise of the Vienna Circle and the forced exodus of scientists and intellectuals from Austria The second part of the book includes a bio bibliographical documentation of the Vienna Circle members and for the first time of the assassination of Moritz Schlick in 1936 followed by an appendix comprising an extensive list of sources and literature *Catalog Number of the University of Kentucky*
