MODERN CONTROL SYSTEMS THEORY. CT LEONDES (ED.), 1965 *Modern Control Systems Engineering* Zoran Gajic, Zoran Gajić, M. Lelić, 1996 The book represents a modern treatment of classical control theory and application concepts Theoretically it is based on the state space approach where the main concepts have been derived using only the knowledge from a first course in linear algebra Practically it is based on the MATLAB package for computer aided control system design so that the presentation of the design techniques is simplified The inclusion of MATLAB allows deeper insights into the dynamical behaviour of real physical control systems which are quite often of high dimensions Continuous time and discrete time control systems are treated simultaneously with a slight emphasis on the continuous time systems especially in the area of controller design Instructor's Manual 0 13 264730 3

Modern Control Systems Theory, 1965 *Modern Control Engineering* Katsuhiko Ogata, 2002 This comprehensive treatment of the analysis and design of continuous time control systems provides a gradual development of control theory and shows how to solve all computational problems with MATLAB It avoids highly mathematical arguments and features an abundance of examples and worked problems throughout the book Chapter topics include the Laplace transform mathematical modeling of mechanical systems electrical systems fluid systems and thermal systems transient and steady state response analyses root locus analysis and control systems design by the root locus method frequency response analysis and control systems design by the frequency response two degrees of freedom control state space analysis of control systems
