ABSTRACT

INTRODUCTION: Midwifery care is an essential factor on which the optimum completion of labor depends. Therefore, the correlation between the quality of the professional activities of midwives in the delivery room and the level of satisfaction of patients is of great importance.

AIM: This scientific study is conducted in order to explore and analyze the opinion of patients on the role of the modern midwife during normal birth.

MATERIALS AND METHODS: The study includes 76 patients /women who have given birth/ from the University Hospital for Active Treatment "Stoyan Kirkovich" - Stara Zagora in the period January-June 2016. A criterion for inclusion in the study was a definitive diagnosis - vaginal delivery. A sociological method was used - anonymous questionnaire. The data were processed with the statistical package SPSS.

RESULTS AND CONCLUSION: The results allowed us to draw the conclusion that there is a tendency to neglect the integrated approach in the implementation of obstetric care at the expense of instrumental care. Also, patients define the work of the midwife as a significant factor for the optimal flow of the process of birth.

Keywords: *midwife, labor, patients, satisfaction*

INTRODUCTION

The midwife is a part of the medical team during one of the most important moments for each woman - the birth. Obstetric care is a significant factor, on which its optimal results depend. Present reality, however, registers some negative trends - shortage and turnover of obstetric staff, lowered work motivation of the health care professionals and diminished prestige of the Bulgarian midwife. Simultaneously, the requirements of patients and employers re-

garding the quality of health services are growing. Increasingly discussed among the guild is the problem of the limited competence of midwives in our country compared to their counterparts in the other EU countries.

These trends focus on the correlation between the quality of the professional activities of the midwives in the delivery room and the level of satisfaction of the patients, as well as raise questions about the role of the Bulgarian midwife in the system of maternal health.

Bulgarian legislation (Regulation №19 on approving the medical standard "Obstetrics and Gynecology", Regulation №1 on professional activities that midwives may perform on instruction or by themselves) regulates the activities of the midwife in assisting in a normal birth, namely (2,3):

Authority, Gender, and Midwifery in Early Modern Italy Jennifer F. Kosmin,2020-08-31 Authority Gender and Midwifery in Early Modern Italy Contested Deliveries explores attempts by church state and medical authorities to regulate and professionalize the practice of midwifery in Italy from the late sixteenth to the late eighteenth century Medical writers in this period devoted countless pages to investigating the secrets of women s sexuality and the processes of generation By the

eighteenth century male practitioners in Britain and France were even successfully advancing careers as male midwives Yet female midwives continued to manage the vast majority of all early modern births An examination of developments in Italy where male practitioners never made successful inroads into childbirth brings into focus the complex social religious and political contexts that shaped the management of reproduction in early modern Europe Authority Gender and Midwifery in Early Modern Italy argues that new institutional spaces to care for pregnant women and educate midwives in Italy during the eighteenth century were not strictly medical developments but rather socio political responses both to long standing concerns about honor shame and illegitimacy and contemporary unease about population growth and productivity In so doing this book complicates our understanding of such sites situating them within a longer genealogy of institutional spaces in Italy aimed at regulating sexual morality and protecting female honor It will be of interest to scholars of the history of medicine religious history social history and Early Modern Italy

Nutrition in Pregnancy and Childbirth Lorna Davies,Ruth Deery,2013-12-04 Making good nutritional choices can mean women optimise the outcomes of their birthing experience and offer their babies the best possible start in life To support this all health professionals who work with women during pregnancy birth and the postnatal period need to have an appropriate knowledge of nutrition healthy eating and other food related issues This evidence based text provides an informative and accessible introduction to nutrition in pregnancy and childbirth As well as allowing readers to recognise when nutritional deficiency may be creating challenges it explores the psychosocial and cultural context of food and considers their relevance for women s eating behaviour Finally important emerging issues such as eating during labour food supplements and maternal obesity are discussed An important reference for health professionals working in midwifery or public health contexts especially this book is also the ideal companion for a course on nutrition in pregnancy and childbirth
