thought is the result of different experiences geographical and social factors Even though it is not clear when Mathematics had started it is evident that it had been used at an early stage of human history and by ancient Babylonians and Egyptians who have already developed a sophisticated corpus of mathematical items which were the workhorse tools in engineering navigation trades and astronomy The book sweeps across the mathematical minds of the Greek and Arab traditions concepts by Assyro Babylonians and ancient Indian Vedic culture The mathematical mind has modeled the evolution of societies and has been modeled by it It is now in the midst of a great revolution and it is not clear where it will bring us The current new epoch needs new mathematical tools and above this a new way of looking at Mathematics This book tells the tale of what went on and what might go on **Electric Circuit Theory and the Operational Calculus** John Renshaw Carson,1926

Technological Concepts and Mathematical Models in the Evolution of Modern Engineering Systems Mario Lucertini,Ana Millàn Gasca,Fernando Nicolò,2012-12-06 M LUCERTINI A MILLAN GASCA AND F NICOLO 1 Technology as Knowledge The Case of Modern Engineering Systems In recent years scholars coming from the fields of history and philosophy of science and technology have devoted much attention to the problem of technology as knowledge and to the emergence of an autonomous engineering science in the Industrial Age This interest echoes a growing awareness among engineers of the independence of their conceptual approach with respect to other forms of knowledge linked to the consolidation of autonomous academic engineering research in the 20 century A careful examination of the nature of technological knowledge appears particularly valuable in view of the pervasive presence of technology in contemporary life and culture not only as a result of its impressive achievements but through the less obvious influence of its concepts and viewpoints as well The activity of engineers and technicians has been traditionally based on the practical ability to cope with specific situations and to attain the corresponding specific goal by means of the design and realization of an artifact or structure on the basis of past experience handed down by tradition and applied by means of trial and error and rule of thumb procedures But the existence of a theoretical background and of principles underpinning this activity can be traced back to classical antiquity
