Modern Potting Composts A. C. Bunt, 1976 Modern Potting Composts HarperCollins Canada, Limited, 1986-04-01 *The Role of Organic Matter in Modern Agriculture* Y. Chen, Y. Avnimelech, 2012-12-06 The use of organic residues as a means of maintaining and increasing soil fertility is of long standing This tradition has been somewhat neglected since the introduction of mineral fertilizers at low cost More and more farmers and scientists are now showing renewed interest in the proper and effective use of organic residues composts and other recycled organic additives The role and function of organic amendments in modern agricultural systems have become topics of major interest in the scientific and agricultural communities Research work on residue disposal has provided new concepts on the interaction between organic components and soils as well as new handling technologies e.g. pelletizing of organic residues The trend to conserve energy has led scientists to study the minimal tillage system to find ways of replacing conventional inorganic fertilizers with natural organic products or microbial preparations and to develop new composting methods The drive to achieve higher yields in commercial greenhouse farming has led to a search for optimum substrates as growth media and for improved management techniques This has led to the introduction of organic substitutes for peat notably those originating from agricultural wastes Another important aspect is the current interest in organic farming where use of synthetic chemicals is avoided or prohibited An increasing percentage of the population in highly developed countries is willing to pay premium prices for food produced on soils where inorganic fertilizers and other agricultural chemicals have not been used

Beneficial Co-Utilization of Agricultural, Municipal and Industrial by-Products Sally L. Brown, J. Scott Angle, Lee W. Jacobs, 2012-12-06 Co utilization or blending of residuals offers a unique opportunity to develop products with particular characteristics that are able to target specific customer needs The very notion of deliberately blending by products suggests that the recycling and beneficial reuse industries are taking a quantitative step forward towards developing products rather than simply reusing residuals At the same time that this step provides unique opportunities it also presents unique challenges The science associated with the beneficial use of one product may not apply when that product is mixed with another residual Blending of materials may alter the chemistry of the components of the mixture This may offer additional benefits as in the case of disease suppression in composts or present unexpected problems as the use of lime stabilized biosolids has done in Maryland This book consists of the proceedings of the Beltsville Symposium The organizers of the

Symposium attempted to structure a meeting that would outline both the potential benefits of co utilization as well as concerns The editors have divided the proceedings into sections that describe the practical basis for co utilization of residuals as well as the potential benefits Specific considerations are described Finally case studies include descriptions of successful operations and data that detail results of research involving co utilization materials Blending of materials for specific objectives needs to be the focus of any successful co utilization effort The scientific implications of the mix need to be determined before a product can be used properly
