Klemm, 2012 This book provides a comparison of the different chemical structures normal state properties and simplest superconducting properties of all

known classes of layered superconductors It introduces the three phenomenological models used to describe such systems and will guide young researchers hoping to produce a room temperature superconductor Organic Superconductivity M. Héritier,2000 **Magnetism: A Supramolecular Function** O. Kahn,2013-03-09 Molecular magnetism is a new field of research dealing with the synthesis and study of the physical properties of molecular assemblies involving open shell units It is essentially interdisciplinary joining together organic organometallic and inorganic chemists as well as theoreticians physicists and materials scientists At the core of research into molecular magnetism lie design and synthesis of new molecular assemblies exhibiting bulk properties such as long range magnetic ordering or bistability with an hysteresis effect which confers a memory effect on the system In such terms magnetism may be considered a supramolecular function The first eight contributions to this volume present the state of the art in organic supramolecular chemistry emphasising interlocked systems and molecular trees The following six articles are devoted to molecular materials constructed from organic radicals and transition metal units Molecular bistability is then focused on followed by metal organic and coordination magnetic materials A new approach to nano sized particles closes the work *High-Temperature Superconductivity* Victor Dmitrievich Lakhno,2022-08-01 High temperature superconducting theory drew controversy after the discovery of superconductors at close to room temperatures However a consistent microscopic theory of HT superconductivity based on bipolaron mechanism leads to a better understanding of microscopic and macroscopic description By presenting aspects of superconductivity now joined in a strict theory rather than separate models this work is especially useful for graduate students Designing the Molecular World Philip Ball,1996-12 Molecular chemistry
