Darwin-Inspired Learning Carolyn J.

Boulter, Michael J. Reiss, Dawn L. Sanders, 2015-01-19 Charles Darwin has been extensively analysed and written about as a scientist Victorian father and husband However this is the first book to present a carefully thought out pedagogical approach to learning that is centered on Darwin's life and scientific practice The ways in which Darwin developed his scientific ideas and their far reaching effects continue to challenge and provoke contemporary teachers and learners inspiring them to consider both how scientists work and how individual humans read nature Darwin inspired learning as proposed in this international collection of essays is an enquiry based pedagogy that takes the professional practice of Charles Darwin as its source Without seeking to idealise the man Darwin inspired learning places importance on active learning hands on enquiry critical thinking creativity argumentation interdisciplinarity In an increasingly urbanised world first hand observations of living plants and animals are becoming rarer Indeed some commentators suggest that such encounters are under threat and children are living in a time of nature deficit Darwin inspired learning with its focus on close observation and hands on enquiry seeks to re engage children and young people with the living world through critical and creative thinking modeled on Darwin's life and science

Deep Space Probes Gregory L. Matloff, 2006-08-31 The Space Age is nearly 50 years old but exploration of the outer planets and beyond has only just begun Deep Space Probes Second Edition draws on the latest research to explain why we should explore beyond the edge of the Solar System and how we can build highly sophisticated robot spacecraft to make the journey Many technical problems remain to be solved among them propulsion systems to permit far higher velocities and technologies to build vehicles a fraction of the size of today's spacecraft Beyond the range of effective radio control robot vehicles for exploring deep space will need to be intelligent thinking craft able to make vital decisions entirely on their own Gregory Matloff also looks at the possibility for human travel into interstellar space and some of the immense problems that such journeys would entail This second edition includes an entirely new chapter on holographic message plaques for future interstellar probes a NASA funded project

Looking Beyond The Frontiers Of Science: Dedicated To The 80th Birthday Of Kk Phua Lars Brink, Ngee-pong Chang, Kazuo Fujikawa, Da-hsuan Feng, Mo-lin Ge, Leong-chuan Kwek, Spenta R Wadia, 2022-07-25 Professor Kok Khoo Phua is the Founding Director and Emeritus Professor of the Institute of Advanced Studies IAS at Nanyang Technological University NTU and Adjunct Professor of Department of Physics both at Nanyang Technological University NTU and National University of Singapore NUS He is the Chairman and Editor in Chief of World Scientific Publishing Co Pte Ltd When he was elected a Fellow of the American Physical Society APS in 2009 the citation read For tireless efforts to strengthen scientific research throughout Asia and promote international physics education and scholarly exchanges and for enriching science and education through the World Scientific Publishing Company he founded This unique volume on the

occasion of his 80th birthday is a compilation of tributes from his friends who have known him for decades along with scientific articles that celebrate his visionary approach to promote science worldwide *Comptes rendus de l'atelier sur la physique des K, Orsay, France, 1996* Lydia Iconomidou-Fayard, 1997 [Centauri Dreams](#) Paul Gilster, 2013-04-18 I wrote this book because I wanted to learn more about interstellar flight Not the Star Trek notion of tearing around the Galaxy in a huge spaceship that was obviously beyond existing technology but a more realistic mission In 1989 I had videotaped Voyager 2's encounter with Neptune and watched the drama of robotic exploration over and over again I started to wonder whether we could do something similar with Alpha Centauri the nearest star to the Sun Everyone seemed to agree that manned flight to the stars was out of the question if not permanently then for the indefinitely foreseeable future But surely we could do something with robotics And if we could figure out a theoretical way to do it how far were we from the actual technology that would make it happen In other words what was the state of our interstellar technology today those concepts and systems that might translate into a Voyager to the stars Finding answers meant talking to people inside and outside of NASA I was surprised to learn that there is a large literature of interstellar flight Nobody knows for sure how to propel a spacecraft fast enough to make the interstellar crossing within a time scale that would fit the conventional idea of a mission but there are candidate systems that are under active investigation Some of this effort begins with small systems that we'll use near the Earth and later hope to extend to deep space missions
