

Riding the Whirlwind: Managing Turbulence

Peter Benton and Bruce Lloyd

Bruce Lloyd in discussion with Peter Benton, Director General of the British Institute of Management 1985-1991 and author of Riding the Whirlwind, (Paul Blackwell (1990), 206 pp., £16.95).

Managing Turbulence

BL: Can we start with a summary of the central message of your recent book *Riding the Whirlwind*?

PB: You can see from the subtitle *Managing Turbulence* that this is the subject of the book. How can people manage turbulence successfully; manage the forces that are present in turbulence so that organisations can benefit, rather than get swept away by these apparently unpredictable events? The main title *Riding the Whirlwind* was taken from Addison's poems in praise of Marlborough, written about the battle of Blenheim: 'Calm and serene he drives the furious Main, . . . Rides in the whirlwind, and directs the storm.' The image is of Marlborough, the leader, a calm and serene man, dispassionately reading the energy, the forces of the battle, shaping those forces towards victory. The theme right through the book is then first that we, in industry, commerce, and indeed in much of our society, are moving from the planned economy 1940s era in which fierce forces cause turbulence. And secondly that the individual can draw immense benefit from the energy unleashed in this process, but only if he or she reads the battle, shaping the forces, instead of opposing or ignoring them.

BL: One of the paradoxes that struck me from reading the book was that the whirlwind and turbulence was such a natural part of life and history, that the key thing was to recognise that it was the natural state of the life in the world as we know it. And the ability of the individual to be comfortable in living with themselves in that natural state is one of the important lessons to be learned from history. The question is how do people learn to do it, or learn to do it better.

PB: You are quite right. Turbulence is a natural state, but there have been quite extended periods of history where turbulence has been very strictly constrained by the structure of society. There are benefits in a historical perspective. If we go back to the Middle Ages we see a period of several hundred years when the structure of society constrained turbulence, initially by deliberate choice, and then by codification of the systems. It is quite understandable. After the Roman Empire broke up, life was hell almost everywhere. There were ferocious barbaric raids in areas that had been peaceful, fertile and civilised, and so any warlord who could provide some local protection soon gathered followers. That warlord system developed into the feudal structure, all growing out of the perfectly natural human desire to minimise destructive and barbaric turbulence. And then 500 years ago the Renaissance was an extraordinarily instructive period. After hundreds of years of unnatural restrictions, there was turbulent and very exciting development in art and other aspects of society.

Since the beginning of the Second World War we have seen a somewhat similar development. In the book I quote from an article by Geoffrey Crowther, a great editor of *The Economist*, that appeared in *Fortune* magazine in 1941:

'The public has not lost the desire of having the public sector controlled and somewhat. It has demanded a greater infusion of funds into a system that was generally very largely one of freedom. It seems as if has decided, controlled, limited, managed and used the public sector, with the view that the extraordinary opportunities for greater individualism have been externally reduced . . . it is the desire to prevent existing business, existing markets, existing employment that leads one naturally after another to try (a) "subsidy" (b) other forms of the economy.'

That comment shows how deep is the desire, even in the most freedom-loving and capitalist sections of the world, for stability. And so we have had, for the past 50 years a managed economy—everywhere, we have had it in the U.S., we have had it in Britain, we have had it, in Europe, we have had it in Eastern

Maritime Governance and Policy-Making Michael Roe, 2012-07-20 A close analysis of the framework of existing governance and the existing jurisdictional arrangements for shipping and ports reveals that while policy making is characterized by national considerations through flags institutional representation at all jurisdictions and the inviolability of the state the commercial financial legal and operational environment of the sector is almost wholly global This governance mismatch means that in practice the maritime industry can avoid policies which it dislikes by trading nations off against one another while enjoying the freedoms and benefits of a globalized economy A Post modern interpretation of this globalized society prompts

suggestions for change in maritime policy making so that the governance of the sector better matches more closely the environment in which shipping and ports operate Maritime Governance and Policy Making is a controversial commentary on the record of policy making in the maritime sector and assesses whether the reason for continued policy failure rests with the inadequate governance of the sector Maritime Governance and Policy Making addresses fundamental questions of governance jurisdiction and policy and applies them to the maritime sector This makes it of much more interest to a much wider audience including students researchers government officials and those with industrial and commercial interests in the shipping and ports areas and also of more value as it places the specific maritime issues into their wider context Maritime Governance and Policy Making addresses fundamental questions of governance jurisdiction and policy and applies them to the maritime sector This makes it of much more interest to a much wider audience including students researchers government officials and those with industrial and commercial interests in the shipping and ports areas and also of more value as it places the specific maritime issues into their wider context

Catastrophes and Conflicts Klaus

Gottstein, 2018-12-17 First published in 1999 this book describes what the International community of scientific institutions could do to reverse this trend by pooling its know how and resources in International and interdisciplinary working groups and standing committees by preparing options for action and by standing the possibilities for overcoming the political and economic obstacles to the implementation of expert advice The reasons are given why neighboring groups of people sooner or later start fighting each other unless certain conditions are fulfilled These conditions are enumerated Historical examples are presented Since lack of mutual trust often based on inherited enemy images is at the roots of many conflicts is shown how trust among former opponents can be created by working on joint projects particularly when both sides are threatened by the same danger In previous history this danger was often a common enemy Today we must learn that all of mankind is threatened by environmental and other global problems which can only be mastered by joint efforts forgetting the enmities of earlier generations Furthermore it is explained that many catastrophes could be avoided if risks were properly assessed and taken seriously and necessary precautions not avoided for financial reasons just hoping for the best
