*Fifth International Congress of Chinese Mathematicians* Lizhen Ji, 2012. This two part volume represents the proceedings of the Fifth International Congress of Chinese Mathematicians held at Tsinghua University Beijing in December 2010. The Congress brought together eminent Chinese and overseas mathematicians to discuss the latest developments in pure and applied mathematics. Included are 60 papers based on lectures given at the conference. *Moduli Spaces of Riemann Surfaces* Benson Farb, Richard

Hain, Eduard Looijenga, 2013-08-16. Mapping class groups and moduli spaces of Riemann surfaces were the topics of the Graduate Summer School at the 2011 IAS Park City Mathematics Institute. This book presents the nine different lecture series comprising the summer school covering a selection of topics of current interest. The introductory courses treat mapping class groups and Teichmüller theory. The more advanced courses cover intersection theory on moduli spaces, the dynamics of polygonal billiards and moduli spaces, the stable cohomology of mapping class groups, the structure of Torelli groups and arithmetic mapping class groups. The courses consist of a set of intensive short lectures offered by leaders in the field designed to introduce students to exciting current research in mathematics. These lectures do not duplicate standard courses available elsewhere. The book should be a valuable resource for graduate students and researchers interested in the topology, geometry and dynamics of moduli spaces of Riemann surfaces and related topics. Titles in this series are co-published with the Institute for Advanced Study, Park City Mathematics Institute, Members of the Mathematical Association of America (MAA) and the National Council of Teachers of Mathematics (NCTM) receive a 20% discount from list price.

**Perspectives in Riemannian Geometry** Vestislav Apostolov, 2006. Special geometries as well as the relation between curvature and topology have always been of interest to differential geometers. More recently these topics have turned out to be of use in physical problems related to string theory as well. This volume provides a unique and thorough survey on the latest developments on Riemannian geometry, special geometrical structures on manifolds and their interactions with other fields such as mathematical physics, complex analysis and algebraic geometry. This volume presents ten papers written by participants of the Short Program on Riemannian Geometry, a workshop held at the CRM in Montreal in 2004. It will be a valuable reference for graduate students and research mathematicians alike. Information for our distributors. Titles in this series are copublished with the Centre de Recherches Mathématiques. **Holomorphic Curves in Symplectic Geometry**

**Perspectives In Scalar Curvature (In 2 Volumes)** Mikhail L Gromov, H Blaine Lawson, Jr., 2022-12-19 Volume I contains a long article by Misha Gromov based on his many years of involvement in this subject It came from lectures delivered in Spring 2019 at IHES There is some background given Many topics in the field are presented and many open problems are discussed One intriguing point here is the crucial role played by two seemingly unrelated analytic means index theory of Dirac operators and geometric measure theory Very recently there have been some real breakthroughs in the field Volume I has several survey articles written by people who were responsible for these results For Volume II many people in areas of mathematics and physics whose work is somehow related to scalar curvature were asked to write about this in any way they pleased This gives rise to a wonderful collection of articles some with very broad and historical views others which discussed specific fascinating subjects These two books give a rich and powerful view of one of geometry's very appealing sides

**A Primer on Mapping Class Groups** Benson Farb, Dan Margalit, 2012 The study of the mapping class group  $\text{Mod } S$  is a classical topic that is experiencing a renaissance It lies at the juncture of geometry topology and group theory This book explains as many important theorems examples and techniques as possible quickly and directly while at the same time giving full details and keeping the text nearly self contained The book is suitable for graduate students A Primer on Mapping Class Groups begins by explaining the main group theoretical properties of  $\text{Mod } S$  from finite generation by Dehn twists and low dimensional homology to the Dehn Nielsen Baer theorem Along the

way central objects and tools are introduced such as the Birman exact sequence the complex of curves the braid group the symplectic representation and the Torelli group The book then introduces Teichmüller space and its geometry and uses the action of  $\text{Mod } S$  on it to prove the Nielsen-Thurston classification of surface homeomorphisms Topics include the topology of the moduli space of Riemann surfaces the connection with surface bundles pseudo-Anosov theory and Thurston's approach to the classification

*Quantum Triangulations* Mauro Carfora, Annalisa Marzuoli, 2017-11-27 This book discusses key conceptual aspects and explores the connection between triangulated manifolds and quantum physics using a set of case studies ranging from moduli space theory to quantum computing to provide an accessible introduction to this topic Research on polyhedral manifolds often reveals unexpected connections between very distinct aspects of mathematics and physics In particular triangulated manifolds play an important role in settings such as Riemann moduli space theory strings and quantum gravity topological quantum field theory condensed matter physics critical phenomena and complex systems Not only do they provide a natural discrete analogue to the smooth manifolds on which physical theories are typically formulated but their appearance is also often a consequence of an underlying structure that naturally calls into play non-trivial aspects of representation theory complex analysis and topology in a way that makes the basic geometric structures of the physical interactions involved clear This second edition further emphasizes the essential role that triangulations play in modern mathematical physics with a new and highly detailed chapter on the geometry of the dilatonic non-linear sigma model and its subtle and many faceted connection with Ricci flow theory This connection is treated in depth pinpointing both the mathematical and physical aspects of the perturbative embedding of the Ricci flow in the renormalization group flow of non-linear sigma models The geometry of the dilaton field is discussed from a novel standpoint by using polyhedral manifolds and Riemannian metric measure spaces emphasizing their role in connecting non-linear sigma models effective action to Perelman's energy functional No other published account of this matter is so detailed and informative This new edition also features an expanded appendix on Riemannian geometry and a rich set of new illustrations to help the reader grasp the more difficult points of the theory The book offers a valuable guide for all mathematicians and theoretical physicists working in the field of quantum geometry and its applications

Proceedings Of The 31st International Taniguchi Symposium And Proceedings Of The Conference Kenji Fukaya,Dieter Kotschick,M Furuta,Toshitake Kohno,1994-08-31 Nobel Symposium 129 on Neutrino Physics was held at Haga Slott in Enk ping Sweden during August 19 24 2004 Invited to the symposium were around 40 globally leading researchers in the field of neutrino physics both experimental and theoretical The dominant theme of the lectures was neutrino oscillations which after several years were recently verified by results from the Super Kamiokande detector in Kamioka Japan and the SNO detector in Sudbury Canada Discussion focused especially on effects of neutrino oscillations derived from the presence of matter and the fact that three different neutrinos exist Since neutrino oscillations imply that neutrinos have mass this is the first experimental observation that fundamentally deviates from the standard model of particle physics This is a challenge to both theoretical and experimental physics The various oscillation parameters will be determined with increased precision in new specially designed experiments Theoretical physics is working intensively to insert the knowledge that neutrinos have mass into the theoretical models that describe particle physics The lectures provided a very good description of the intensive situation in the field right now The topics discussed also included mass models for neutrinos neutrinos in extra dimensions as well as the seesaw mechanism which provides a good description of why neutrino masses are so small This book is A4 size

Minsky, Makoto Sakuma, Caroline Series, 2006-06-19 The subject of Kleinian groups and hyperbolic 3 manifolds is currently undergoing explosively fast development the last few years having seen the resolution of many longstanding conjectures This volume contains important expositions and original work by some of the main contributors on topics such as topology and geometry of 3 manifolds curve complexes classical Ahlfors Bers theory computer explorations and projective structures Researchers in these and related areas will find much of interest here      *Topology And Teichmüller Spaces - Proceedings Of The 37th Taniguchi Symposium* Sadayoshi Kojima, Kyoji Saito, Y Matsumoto, Mika Seppala, 1996-11-09 This proceedings is a collection of articles on Topology and Teichmüller Spaces Special emphasis is being put on the universal Teichmüller space the topology of moduli of algebraic curves the space of representations of discrete groups Kleinian groups and Dehn filling deformations the geometry of Riemann surfaces and some related topics      *Introduction to Global Analysis* John Douglas Moore, 2017-12-15 During the last century global analysis was one of the main sources of interaction between geometry and topology One might argue that the core of this subject is Morse theory according to which the critical points of a generic smooth proper function on a manifold determine the homology of the manifold Morse envisioned applying this idea to the calculus of variations including the theory of periodic motion in classical mechanics by approximating the space of loops on by a finite dimensional manifold of high dimension Palais and Smale reformulated Morse's calculus of variations in terms of infinite dimensional manifolds and these infinite dimensional manifolds were found useful for studying a wide variety of nonlinear PDEs This book applies infinite dimensional manifold theory to the Morse theory of closed geodesics in a Riemannian manifold It then describes the problems encountered when extending this theory to maps from surfaces instead of curves It treats critical point theory for closed parametrized minimal surfaces in a compact Riemannian manifold establishing Morse inequalities for perturbed versions of the energy function on the mapping space It studies the bubbling which occurs when the perturbation is turned off together with applications to the existence of closed minimal surfaces The Morse Sard theorem is used to develop transversality theory for both closed geodesics and closed minimal surfaces This book is based on lecture notes for graduate courses on Topics in Differential Geometry taught by the author over several years The reader is assumed to have taken basic graduate courses in differential geometry and algebraic topology
