PREFACE The classic statement of the Riemann boundary problem consists in finding a function z which is analytic and bounded in two domains D and D with a common boundary a smooth closed contour L admitting a continuous extension onto L both from D and D and satisfying on L the boundary condition $t G t t g t$

Riemann's Boundary Problem with Infinite Index Nikolai Vasil'evich Govorov, 1994 The Riemann Boundary Problem on Riemann Surfaces Y. Rodin, 2013-06-29 Approach your problems from the right end It isn't that they can't see the solution It is and begin with the answers Then one day that they can't see the problem perhaps you will find the final question G K Chesterton The Scandal of Father The Hermit Clad in Crane Feathers in R Brown The point of a Pin van Gulik's The Chinese Maze Murders Growing specialization and diversification have brought a host of monographs and textbooks on increasingly specialized topics However the tree of knowledge of mathematics and related fields does not grow only by putting forth new branches It also happens quite often in fact that branches which were thought to be completely disparate are suddenly seen to be related Further the kind and level of sophistication of mathematics applied in various sciences has changed drastically in recent years measure theory is used non trivially in regional and theoretical economics algebraic geometry interacts with physics the Minkowski lemma coding theory and the structure of water meet one another in packing and covering theory quantum fields crystal defects and mathematical programming profit from homotopy theory Lie algebras are relevant to filtering and prediction and electrical engineering can use Stein spaces And in addition to this there are such new emerging subdisciplines as experimental mathematics CFD completely integrable systems chaos synergetics and large scale order which are almost impossible to fit into the existing classification schemes They draw upon widely different sections of mathematics Entire and Subharmonic Functions, 1992 Boundary Value Problems, Integral Equations And Related Problems - Proceedings Of The International Conference Guo Chun Wen, Jian-ke Lu, 2000-02-22 In this proceedings volume the following topics are

discussed 1 various boundary value problems for partial differential equations and functional equations including free and moving boundary problems 2 the theory and methods of integral equations and integral operators including singular integral equations 3 applications of boundary value problems and integral equations to mechanics and physics 4 numerical methods of integral equations and boundary value problems and 5 some problems related with analysis and the foregoing subjects

Complex Analysis I A.A. Gonchar, Viktor P. Havin, N.K. Nikolski, 2013-11-11 A two part volume containing a comprehensive description of the theory of entire and meromorphic functions of one complex variable and its applications and a detailed review of recent investigations concerning the function theoretical peculiarities of polyanalytic functions boundary behaviour value distributions degeneration uniqueness etc

Advances in Harmonic Analysis and Operator Theory Alexandre Almeida, Luís Castro, Frank-Olme Speck, 2013-01-31 This volume is dedicated to Professor Stefan Samko on the occasion of his seventieth birthday The contributions display the range of his scientific interests in harmonic analysis and operator theory Particular attention is paid to fractional integrals and derivatives singular hypersingular and potential operators in variable exponent spaces pseudodifferential operators in various modern function and distribution spaces as well as related applications to mention but a few Most contributions were firstly presented in two conferences at Lisbon and Aveiro Portugal in June July 2011

Modern Methods in Operator Theory and Harmonic

Analysis Alexey Karapetyants, Vladislav Kravchenko, Elijah Liflyand, 2019-08-28 This proceedings volume gathers selected peer reviewed papers from the Modern Methods Problems and Applications of Operator Theory and Harmonic Analysis VIII OTHA 2018 conference which was held in Rostov on Don Russia in April 2018 The book covers a diverse range of topics in advanced mathematics including harmonic analysis functional analysis operator theory function theory differential equations and fractional analysis all fields that have been intensively developed in recent decades Direct and inverse problems arising in mathematical physics are studied and new methods for solving them are presented Complex multiparameter objects that require the involvement of operators with variable parameters and functional spaces with fractional and even variable exponents make these approaches all the more relevant Given its scope the book will especially benefit researchers with an interest in new trends in harmonic analysis and operator theory though it will also appeal to graduate students seeking new and intriguing topics for further investigation *Consolidated Translation Survey* United States. Central Intelligence Agency. Foreign Documents Division, 1969 **Mathematics of the USSR: Izvestija**, 1992 *Operator Theory and Harmonic Analysis* Alexey N. Karapetyants, Vladislav V. Kravchenko, Elijah Liflyand, Helmuth R. Malonek, 2021-09-27 This volume is part of the collaboration agreement between Springer and the ISAAC society This is the first in the two volume series originating from the 2020 activities within the international scientific conference Modern Methods Problems and Applications of Operator Theory and Harmonic Analysis OTHA Southern Federal University in Rostov on Don Russia This volume is focused on general harmonic analysis and its numerous applications The two volumes cover new trends and advances in several very important fields of mathematics developed intensively over the last decade The relevance of this topic is related to the study of complex multiparameter objects required when considering operators and objects with variable parameters **M.G. Krein's Lectures on Entire Operators** Valentina Gorbachuk, 2012-12-06 This book is devoted to the theory of entire Hermitian operators an important branch of functional analysis harmoniously combining the methods of operator theory and the theory of analytic functions This theory enables various problems of classical and modern analysis to be looked at from a uniform point of view In addition it serves as a source for setting and solving many new problems in both theories The three chapters of the book are based on the notes written by his students of M G Krein s lectures on the theory of entire operators with 1 1 deficiency index which he delivered in 1961 at the Pedagogical Institute of Odessa and on his works on the extension theory of Hermitian operators and the theory of analytic functions The theory is further developed in the direction of solving the problems set up by Krein at ICM 66 in the first two appendices The first concerns the case of Hermitian operators with arbitrary defect numbers entire with respect to an ordinary gauge and to a generalized one as well The other focuses on the entire operators representable by differential operators The third appendix is the translation from Russian of the unpublished notes of Krein s lecture in which in particular the place of the theory of entire operators in the whole analysis is elucidated In Krein s mathematical heritage the theory of entire operators occupies a

special position **Complex Analytic Methods for Partial Differential Equations** Heinrich G. W. Begehr, 1994 This is an introductory text for beginners who have a basic knowledge of complex analysis functional analysis and partial differential equations Riemann and Riemann Hilbert boundary value problems are discussed for analytic functions for inhomogeneous Cauchy Riemann systems as well as for generalized Beltrami systems Related problems such as the Poincaré problem pseudoparabolic systems and complex elliptic second order equations are also considered Estimates for solutions to linear equations existence and uniqueness results are thus available for related nonlinear problems the method is explained by constructing entire solutions to nonlinear Beltrami equations Often problems are discussed just for the unit disc but more general domains even of multiply connectivity are involved

Operator Theory and Boundary Eigenvalue Problems I. Gohberg, H. Langer, 2012-12-06 The Workshop on Operator Theory and Boundary Eigenvalue Problems was held at the Technical University Vienna Austria July 27 to 30 1993 It was the seventh workshop in the series of IWOTA International Workshops on Operator Theory and Applications The main topics at the workshop were interpolation problems and analytic matrix functions operator theory in spaces with indefinite scalar products boundary value problems for differential and functional differential equations and systems theory and control The workshop covered different aspects starting with abstract operator theory up to concrete applications The papers in these proceedings provide an accurate cross section of the lectures presented at the workshop This book will be of interest to a wide group of pure and applied mathematicians

Finite or Infinite Dimensional Complex Analysis and Applications Le Hung Son, Wolfgang Tutschke, Chung-Chun Yang, 2013-12-01 There is almost no field in Mathematics which does not use Mathematical Analysis Computer methods in Applied Mathematics too are often based on statements and procedures of Mathematical Analysis An important part of Mathematical Analysis is Complex Analysis because it has many applications in various branches of Mathematics Since the field of Complex Analysis and its applications is a focal point in the Vietnamese research programme the Hanoi University of Technology organized an International Conference on Finite or Infinite Dimensional Complex Analysis and Applications which took place in Hanoi from August 8 12 2001 This conference was the 9 one in a series of conferences which take place alternately in China Japan Korea and Vietnam each year The first one took place there at Pusan University in Korea in 1993 The preceding 8 conference was then held in Shandong in China in August 2000 The 9 conference of the series was the first one which took place above mentioned series of conferences in Vietnam Present trends in Complex Analysis reflected in the present volume are mainly concentrated in the following four research directions 1 Value distribution theory including meromorphic functions meromorphic mappings as well as p -adic functions over fields of finite or zero characteristic and its applications 2 Holomorphic functions in several finitely or infinitely many complex variables 3 Clifford Analysis i.e. complex methods in higher dimensional real Euclidean spaces 4 Generalized analytic functions Mathematics of the USSR , 1992

Mittag-Leffler Functions, Related Topics and Applications Rudolf Gorenflo, Anatoly A. Kilbas, Francesco

Mainardi, Sergei V. Rogosin, 2014-10-16 As a result of researchers and scientists increasing interest in pure as well as applied mathematics in non conventional models particularly those using fractional calculus Mittag Leffler functions have recently caught the interest of the scientific community Focusing on the theory of the Mittag Leffler functions the present volume offers a self contained comprehensive treatment ranging from rather elementary matters to the latest research results In addition to the theory the authors devote some sections of the work to the applications treating various situations and processes in viscoelasticity physics hydrodynamics diffusion and wave phenomena as well as stochastics In particular the Mittag Leffler functions allow us to describe phenomena in processes that progress or decay too slowly to be represented by classical functions like the exponential function and its successors The book is intended for a broad audience comprising graduate students university instructors and scientists in the field of pure and applied mathematics as well as researchers in applied sciences like mathematical physics theoretical chemistry bio mathematics theory of control and several other related areas
